Appendix 2e: Voucher Specimen from Protected Areas

An overview of the African IUCN protected areas for which voucher specimens are available.

The data are grouped per country and protected area, and for each of the taxa the museum acronym is given to indicate the collection where the voucher material is housed. The acronyms are colour coded to reflect the most recent collection date of the material in that museum:

BLACK: no information

GREEN: less than 20 years

BLUE: between 20 and 50 years

ORANGE: between 50 and 100 years

RED: more than 100 years ago.

Botswana

Central Kalahari Game Reserve (IUCN category: IV, Established on: 1961 January 01, Area: 5,180,000 ha.):

Miniopterus natalensis (A. Smith, 1833): **TM**

Chobe National Park (IUCN category: II, Established on: 1968 January 01, Area: 1,057,000 ha.):

Neoromicia capensis (A. Smith, 1829): **FMNH**

Neoromicia zuluensis (Roberts, 1924): **TM**

Nycticeinops schlieffenii (Peters, 1859): **TM**

Gemsbok National Park (IUCN category: II, Established on: 1971 January 01, Area: 2,840,000 ha.):

Tadarida aegyptiaca (E. Geoffroy St.-Hilaire, 1818): **TM**

Burkina Faso

Arly Faunal Reserve (IUCN category: IV, Established on: 1954 January 01, Area: 76,000 ha.):

Nycteris hispida (Schreber, 1774): **USNM**

Cameroon

Dja Wildlife Reserve (IUCN category: IV, Established on: 1950 January 01, Area: 623,619 ha.):

Nycteris major (K. Andersen, 1912): **BMNH**

Central African Republic

Manovo-Gounda-Saint Floris National Park (IUCN category: II, Established on: 1933 January 01, Area: 1,890,868 ha.):

Neoromicia guineensis (Bocage, 1889): **CM**

Neoromicia somalicus (Thomas, 1901): **CM**

Nycteris hispida (Schreber, 1774): **CM**

Pipistrellus nanus (Peters, 1852): **CM**

Pipistrellus rusticus (Tomes, 1861): **CM**

Côte d'Ivoire

Banco National Park (IUCN category: II, Established on: 1953 January 01, Area: 3,000 ha.):

Hypsugo eisentrauti (Hill, 1968): **USNM**

Neoromicia brunneus (Thomas, 1880): **USNM**

Neoromicia tenuipinnis (Peters, 1872): **USNM**

Nycteris arge Thomas, 1903: **MHNG**

Democratic Republic of the Congo

Gangala-na Bodio Hunting Reserve (IUCN category: VI, Area: 985,876 ha.):

Epomophorus labiatus (Temminck, 1837): **RMCA**

Neoromicia rendalli (Thomas, 1889): **RMCA**

Pipistrellus nanus (Peters, 1852): **KBIN**

Scotophilus dinganii (A. Smith, 1833): **KBIN**

Garamba National Park (IUCN category: II, Established on: 1938 January 01, Area: 492,000 ha.):

Epomophorus labiatus (Temminck, 1837): **RMCA**

Eptesicus Rafinesque, 1820: **RMCA**

Neoromicia capensis (A. Smith, 1829): **RMCA**

Nycteris macrotis Dobson, 1876: **KBIN**

Nycteris nana (K. Andersen, 1912): **KBIN**

Pipistrellus nanus (Peters, 1852): **KBIN**

Upemba National Park (IUCN category: II, Established on: 1939 January 01, Area: 1,173,000 ha.):

Neoromicia capensis (A. Smith, 1829): **KBIN**

Nycteris hispida (Schreber, 1774): **KBIN**

Nycteris macrotis Dobson, 1876: **KBIN**

Pipistrellus nanus (Peters, 1852): **KBIN**

Yangambi forest and floral reserve Strict Nature Reserve (IUCN category: Ia, Area: 250,000 ha.):

Nycteris arge Thomas, 1903: **RMCA**

Nycteris hispida (Schreber, 1774): **KBIN**

Pipistrellus nanus (Peters, 1852): **KBIN, RMCA**

Ethiopia

Afdem-Gewane Controlled Hunting Area (IUCN category: VI, Established on: 1973 January 01, Area: 593,200 ha.):

Epomophorus minimus Claessen & De Vree, 1991: **SMF**

Awash National Park (IUCN category: II, Established on: 1958 January 01, Area: 75,240 ha.):

Nycteris hispida (Schreber, 1774): **BMNH, USNM**

Rhinopoma hardwickii Gray, 1831: **BMNH, HNHM**

Ghana

Mole National Park (IUCN category: II, Established on: 1971 January 01, Area: 484,040 ha.):

Nycteris gambiensis (K. Andersen, 1912): **BMNH**

Nycteris hispida (Schreber, 1774): **BMNH**

Kenya

Buffalo Springs National Reserve (IUCN category: II, Established on: 1985 January 01, Area: 13,100 ha.):

Neoromicia helios (Heller, 1912): **CM**

Neoromicia rendalli (Thomas, 1889): **CM**

Neoromicia zuluensis (Roberts, 1924): **SMF**

Central Island National Park (IUCN category: II, Established on: 1983 January 01, Area: 500 ha.):

Nycteris hispida (Schreber, 1774): **BMNH**

Rhinopoma macinnesi Hayman, 1937: **ROM**

Marsabit National Reserve (IUCN category: II, Established on: 1949 January 01, Area: 155,400 ha.):

Nycteris hispida (Schreber, 1774): **USNM**

Masai Mara National Reserve (IUCN category: II, Established on: 1974 January 01, Area: 151,000 ha.):

Epomophorus wahlbergi (Sundevall, 1846): **CM, FMNH**

Pipistrellus hesperidus (Temminck, 1840): **CM**

Meru National Park (IUCN category: II, Established on: 1966 January 01, Area: 87,044 ha.):

Nycteris hispida (Schreber, 1774): **SMF**

Mount Kenya National Park (IUCN category: II, Established on: 1949 January 01, Area: 58,967 ha.):

Nycteris thebaica E. Geoffroy St.-Hilaire, 1818: **BMNH**

Shimba Hills National Reserve (IUCN category: II, Established on: 1968 January 01, Area: 19,251 ha.):

Epomophorus wahlbergi (Sundevall, 1846): **RMNH**

Hypsugo eisentrauti (Hill, 1968): **AMNH, CM**

Neoromicia helios (Heller, 1912): **ROM**

Neoromicia somalicus (Thomas, 1901): **CM**

Tsavo East National Park (IUCN category: II, Established on: 1948 January 01, Area: 1,174,700 ha.):

Nycteris hispida (Schreber, 1774): **SMF**

Lesotho

Sehlabathebe National Park (IUCN category: IV, Established on: 1970 January 01, Area: 6,805 ha.):

Laephotis wintoni Thomas, 1901: **NMB**

Rhinolophus clivus Cretzschmar, 1828: **NMB**

Madagascar

Ankarana Special Reserve (IUCN category: II, Established on: 1956 February 01, Area: 25,308 ha.):

Nycteris madagascariensis G. Grandidier, 1937: **MCZ**

Zombitse-Vohibasia National Park (IUCN category: II, Established on: 1997 December 01, Area: 36,853 ha.):

Pipistrellus hesperidus (Temminck, 1840): **FMNH**

Malawi

Kasungu National Park (IUCN category: II, Established on: 1970 January 01, Area: 231,600 ha.):

Neoromicia capensis (A. Smith, 1829): **BMNH, DCDH**

Neoromicia melckorum (Roberts, 1919): **BMNH**

Lengwe National Park (IUCN category: II, Established on: 1970 January 01, Area: 88,700 ha.):

Pipistrellus nanus (Peters, 1852): **DCDH**

Nyika National Park (IUCN category: II, Established on: 1965 January 01, Area: 313,400 ha.):

Pipistrellus hesperidus (Temminck, 1840): **BMNH, DCDH**

Mozambique

Bazaruto Archipelago National Park (IUCN category: II, Established on: 2001 November 28, Area: 143,000 ha.):

Chaerephon pumilus (Cretzschmar, 1826): **TM**

Zinave National Park (IUCN category: II, Established on: 1972 January 01, Area: 500,000 ha.):

Epomophorus wahlbergi (Sundevall, 1846): **MWSU**

Namibia

Etosha National Park (IUCN category: II, Established on: 1975 June 20, Area: 2,215,140 ha.):

Appendix 3: Synonyms

Appendix 3a: Synonyms by Name

A list of all the synonyms found in the literature (excluding new name combinations and *lapsi calami*). For each of these synonyms the current name is included to facilitate access to information about the taxon in the main text and the other appendices.

The "Taxasyns-id" and "Taxis_id" fields contain numbers used in the African Chiroptera Database, and are included for reference with the database.

Original Name	Taxasyns _id	Current Name	Taxis_id
? <i>anjouanensis</i> Dorst, 1960	2112	<i>Myotis anjouanensis</i> (Dorst, 1960)	450

Appendix 3b: Synonyms by Author

All the synonyms covered in this report (excluding new name combinations and *lapsi calami*). The synonyms are sorted by author and year of description and are linked to the current name.

Some synonyms may be linked to several current names, indicating that they can only be partly assigned to these current names, e.g. *Vesperugo* Keyserling and Blasius, 1839 is assigned to *Eptesicus* Rafinisque, 1820, *Nyctalus* Bowdich, 1825, and *Pipistrellus* Kaup, 1829.

Appendix 3c: Synonyms by Publication Date

Synonyms arranged according to the date they were published. If a complete date could be found, this date is given. In most cases, however, only the year of publication is known, in which case (according to the International Code of Zoological Nomenclature) the last day of the year is considered to be the date of publication (i.e. 31 December). If the month is known, but not the date, the final date of the month is entered. In a large number of cases the publication date is taken from the (cover of the) publication, and as such the date might not be 100 % correct, since these dates tend to be earlier than the exact date the publication was published.

For names published in "*Annals and Magazine of Natural History*" and "*Journal of Natural History*" the publication dates are taken from Evenhuis (2003). For names published in the "*Proceedings of the Zoological Society of London*", the publication dates are taken from Duncan (1937). The publication dates from Schreber's "*Die Säugethiere*" are taken from Sherborn (1891). For E. Geoffroy St.-Hilaire's "*Description de l'Egypte*", the dates are taken from Sherborn (1897a). For Kerr's "*Animal Kingdom*" see Allen (1895).

Publication date	Original Name	Current Name
31 Dec 1774	<i>murinus</i> Schreber	<i>Myotis myotis</i> (Borkhausen, 1797)
31 Dec 1774	<i>Vespertilio barbastellus</i> Schreber	<i>Barbastella barbastellus</i> (Schreber, 1774)

Appendix 3d: Synonyms by Country of Type Specimen

Synonyms arranged in order of the country from which they were described and year of publication.

Synonyms where "Null" is given in place of the author name indicate incomplete entries for which the information has not yet been found.

Unknown Country

1774	<i>murinus</i> Schreber	<i>Myotis myotis</i> (Borkhausen, 1797)
1777	<i>Pteropus</i> Erleben	<i>Pteropus</i> Erleben, 1777
1779	CHIROPTERA Blumenbach	CHIROPTERA Blumenbach, 1779
1792	<i>major</i> Kerr	<i>Rhinolophus ferrumequinum</i> (Schreber, 1774)
1795	<i>Nycteris</i> G. Cuvier and E. Geoffroy	<i>Nycteris</i> G. Cuvier and E. Geoffroy, 1795
1797	<i>Vespertilio myosotis</i> Borkhausen	<i>Myotis myotis</i> (Borkhausen, 1797)
1799	<i>Rhinolophus</i> Lacépède	<i>Rhinolophus</i> Lacépède, 1799
1799	<i>Spectrum</i> Lacépède	<i>Pteropus</i> Erleben, 1777
1802	<i>Spectrum rubidum</i> Daudin	<i>Pteropus subniger</i> (Kerr, 1792)
1803	<i>major</i> E. Geoffroy Saint-Hilaire	<i>Rhinolophus ferrumequinum</i> (Schreber, 1774)
1803	<i>Nycteris</i> Desmarest	<i>Nycteris</i> G. Cuvier and E. Geoffroy, 1795
1803	<i>ruber</i> E. Geoffroy Saint-Hilaire	<i>Pteropus subniger</i> (Kerr, 1792)
1806	<i>Vespertilio serotinus</i> E. Geoffroy Saint-Hilaire	<i>Nyctalus noctula</i> (Schreber, 1774)
1809	<i>Vespertilio caninus</i> var. <i>b</i> Goldfuss	<i>Eidolon helvum helvum</i> (Kerr, 1792)
1814	<i>Tadarida</i> Rafinesque	<i>Tadarida</i> Rafinesque, 1814
1814	<i>torquatus</i> G. Fischer	<i>Pteropus subniger</i> (Kerr, 1792)
1815	<i>Eidolon</i> Rafinesque	<i>Eidolon</i> Rafinesque, 1815
1815	<i>Pteropus collaris</i> Illiger	<i>Pteropus subniger</i> (Kerr, 1792)
1815	<i>Vespertilia</i> Rafinesque	VESPERTILIONIDAE Gray, 1821
1816	<i>Macrotus</i> Leach	<i>Plecotus</i> E. Geoffroy St.-Hilaire, 1818
1816	<i>Myopterus senegalensis</i> Oken	<i>Myopterus daubentonii</i> Desmarest, 1820
1816	<i>Phyllorhina</i> Leach	<i>Rhinolophus</i> Lacépède, 1799
1818	<i>Myopterus</i> E. Geoffroy Saint-Hilaire	<i>Myopterus</i> E. Geoffroy St.-Hilaire, 1818
1818	<i>Nyctinomus</i> E. Geoffroy Saint-Hilaire	<i>Chaerephon</i> Dobson, 1874
1818	<i>Plecotus</i> E. Geoffroy Saint-Hilaire	<i>Plecotus</i> E. Geoffroy St.-Hilaire, 1818
1818	<i>Pteropus aegyptiacus</i> E. Geoffroy Saint-Hilaire	<i>Rousettus aegyptiacus</i> (E. Geoffroy St.-Hilaire, 1810)
1818	<i>Rhinopoma</i> E. Geoffroy Saint-Hilaire	<i>Rhinopoma</i> E. Geoffroy St.-Hilaire, 1818
1818	<i>Taphozous</i> E. Geoffroy Saint-Hilaire	<i>Taphozous</i> E. Geoffroy St.-Hilaire, 1818
1819	<i>Vespertilio dasykarpos</i> Kuhl	<i>Nyctalus leisleri</i> (Kuhl, 1817)
1820	<i>Eptesicus</i> Rafinesque	<i>Eptesicus</i> Rafinesque, 1820
1820	<i>Myopterus</i> Desmarest	<i>Myopterus</i> E. Geoffroy St.-Hilaire, 1818
1820	<i>Rhinopoma microphylla</i> Desmarest	<i>Rhinopoma microphyllum</i> (Brünnich, 1782)
1821	<i>Barbastella</i> Gray	<i>Barbastella</i> Gray, 1821
1821	<i>Nyctinomus</i> Gray	<i>Tadarida</i> Rafinesque, 1814
1821	<i>Rousettus</i> Gray	<i>Rousettus</i> Gray, 1821
1821	<i>Vespertilionidae</i> Gray	VESPERTILIONIDAE Gray, 1821
1821	<i>Vespertilioninae</i> Gray	<i>Vespertilioninae</i> Gray, 1821
1821	<i>Vespertilionoidea</i> Gray	VESPERTILIONOIDEA Gray, 1821
1821	<i>Scotophilus</i> Leach	<i>Scotophilus</i> Leach, 1821
1821	<i>Cephalotidae</i> Gray	PTEROPODIDAE Bonaparte, 1838
1821	CHEIROPTERA Gray	CHIROPTERA Blumenbach, 1779
1821	FRUCTIVORAE Grey	PTEROPODIFORMI
1821	INSECTIVORAE Gray	VESPERTILIONIFORMI
1821	<i>Nyctinoma</i> Bowdich	<i>Tadarida</i> Rafinesque, 1814
1821	<i>Pteropidae</i> Gray	PTEROPODIDAE Bonaparte, 1838
1822	CHEIROPTERA Flemming	CHIROPTERA Blumenbach, 1779
1822	<i>Nyctinomia</i> Fleming	<i>Tadarida</i> Rafinesque, 1814
1825	<i>Dinops</i> Savi	<i>Tadarida</i> Rafinesque, 1814
1825	<i>Nyctalus</i> Bowdich	<i>Nyctalus</i> Bowdich, 1825
1825	<i>Pteropus geoffroyi</i> Temminck	<i>Rousettus aegyptiacus</i> (E. Geoffroy St.-Hilaire, 1810)
1825	<i>Rhinolophidae</i> Gray	RHINOLOPHIDAE Gray, 1825
1825	<i>Rhinolophinae</i> Gray	<i>Rhinolophinae</i> Gray, 1825
1827	<i>Dysopes geoffroyi</i> Temminck	<i>Tadarida aegyptiaca aegyptiaca</i> (E. Geoffroy St.-Hilaire, 1818)
1827	<i>Vespertilio ferrugineus</i> Brehm	<i>Nyctalus lasiopterus</i> (Schreber, 1780)
1827	<i>Vespertilio screibersii</i> Lesson	<i>Miniopterus schreibersii</i> (Kuhl, 1817)
1829	<i>Cercopteropus</i> Burnett	<i>Rousettus</i> Gray, 1821
1829	<i>Barbastellus</i> Kaup	<i>Barbastella</i> Gray, 1821
1829	<i>Cnephæus</i> Kaup	<i>Eptesicus</i> Rafinesque, 1820
1829	<i>Myotis</i> Kaup	<i>Myotis</i> Kaup, 1829
1829	<i>Nystactes</i> Kaup	<i>Myotis</i> Kaup, 1829

1829	<i>Pipistrellus</i> Kaup	<i>Pipistrellus</i> Kaup, 1829
1829	<i>Plecautus</i> F. Cuvier	<i>Plecotus</i> E. Geoffroy St.-Hilaire, 1818
1829	<i>Pterygistes</i> Kaup	<i>Nyctalus</i> Bowdich, 1825
1829	<i>Vespertilio auritus</i> β <i>aegyptius</i> J.B. Fischer	<i>Plecotus christii</i> Gray, 1838
1830	<i>Dysopes</i> Cretzschmar	<i>Tadarida</i> Rafinesque, 1814
1830	<i>Loeconoë</i> Boie	<i>Myotis</i> Kaup, 1829
1831	<i>Hipposideros</i> Gray	<i>Hipposideros</i> Gray, 1831
1831	<i>Pachyotus</i> Gray	<i>Scotophilus</i> Leach, 1821
1834	<i>Hipposideros</i> Gray	<i>Hipposideros</i> Gray, 1831
1835	<i>Pteropus</i> Ogilby	<i>Epomophorus</i> Bennett, 1836
1835	<i>Epomophorus gambianus</i> Ogilby	<i>Epomophorus gambianus gambianus</i> (Ogilby, 1835)
1835	<i>Epomophorus gambianus</i> Ogilby	<i>Epomophorus gambianus</i> (Ogilby, 1835)
1836	<i>Epomophorus</i> Bennett	<i>Epomophorus</i> Bennett, 1836
1836	<i>Rhinocrepis</i> Gervais	<i>Rhinolophus</i> Lacépède, 1799
1837	<i>Miniopterus</i> Bonaparte	<i>Miniopterus</i> Bonaparte, 1837
1837	<i>Myoptera</i> de Blainville	<i>Myopterus</i> E. Geoffroy St.-Hilaire, 1818
1837	<i>Noctula</i> Bonaparte	<i>Eptesicus</i> Rafinesque, 1820
1837	<i>Pipistrella</i> Bonaparte	<i>Pipistrellus</i> Kaup, 1829
1837	<i>vulgaris</i> Temminck	<i>Pteropus subniger</i> (Kerr, 1792)
1838	<i>Asellia</i> Gray	<i>Asellia</i> Gray, 1838
1838	<i>Barbastellus communis</i> Gray	<i>Barbastella barbastellus</i> (Schreber, 1774)
1838	<i>Epomophorus whitii</i> Gray	<i>Epomophorus gambianus gambianus</i> (Ogilby, 1835)
1838	<i>Lavia</i> Gray	<i>Lavia</i> Gray, 1838
1838	<i>Petalia</i> Gray	<i>Nycteris</i> G. Cuvier and E. Geoffroy, 1795
1838	<i>Romicia</i> Gray	<i>Pipistrellus</i> Kaup, 1829
1838	<i>Emballonura</i> Temminck	<i>Emballonura</i> Temminck, 1838
1838	<i>Nyctinomus pusilus</i> Lesson	<i>Chaerephon pumilus</i> (Cretzschmar, 1826)
1838	PTEROPODIDAE Bonaparte	PTEROPODIDAE Bonaparte, 1838
1838	<i>Saccolaimus</i> Temminck	<i>Saccolaimus</i> Temminck, 1838
1839	<i>pachygnathus</i> Michahelles	<i>Nyctalus leisleri</i> (Kuhl, 1817)
1839	<i>Synotis</i> Keyserling and Blasius	<i>Barbastella</i> Gray, 1821
1839	<i>Vesperugo</i> Keyserling and Blasius	<i>Nyctalus</i> Bowdich, 1825
1839	<i>Vesperugo</i> Keyserling and Blasius	<i>Pipistrellus</i> Kaup, 1829
1839	<i>Vesperugo</i> Keyserling and Blasius	<i>Eptesicus</i> Rafinesque, 1820
1839	<i>Vesperus</i> Keyserling and Blasius	<i>Eptesicus</i> Rafinesque, 1820
1840	<i>Dysopes Savii</i> Schinz	<i>Tadarida teniotis</i> (Rafinesque, 1814)
1840	<i>Romicius</i> Blyth	<i>Pipistrellus</i> Kaup, 1829
1841	<i>Capaccinius</i> Bonaparte	<i>Myotis</i> Kaup, 1829
1841	<i>Selysius</i> Bonaparte	<i>Myotis</i> Kaup, 1829
1842	<i>Kerivoula</i> Gray	<i>Kerivoula</i> Gray, 1842
1842	<i>Noctulinia</i> Grey	<i>Nyctalus</i> Bowdich, 1825
1842	<i>Trilatitus</i> Gray	<i>Myotis</i> Kaup, 1829
1842	<i>Harpyidae</i> H. Smith	PTEROPODIDAE Bonaparte, 1838
1842	<i>Mops</i> Lesson	<i>Mops (Mops)</i> Lesson, 1842
1842	<i>Mops</i> Lesson	<i>Mops</i> Lesson, 1842
1842	<i>Nicticejus</i> Rüppell	<i>Scotophilus</i> Leach, 1821
1843	<i>Xantharpyia</i> Gray	<i>Rousettus</i> Gray, 1821
1843	<i>Gymnorhina</i> Wagner	VESPERTILIONIDAE Gray, 1821
1844	<i>Eleutherura</i> Gray	<i>Rousettus</i> Gray, 1821
1846	<i>Livia</i> Agassiz	<i>Lavia</i> Gray, 1838
1847	<i>Aquias</i> Gray	<i>Rhinolophus</i> Lacépède, 1799
1849	<i>Kirivoula</i> Gervais	<i>Kerivoula</i> Gray, 1842
1849	<i>Tralatitus</i> Gervais	<i>Myotis</i> Kaup, 1829
1849	<i>Vespertilio minutus</i> A. Smith	<i>Eptesicus hottentotus</i> (A. Smith, 1833)
1852	<i>Cynonycteris</i> Peters	<i>Rousettus</i> Gray, 1821
1852	<i>Phyllorhina caffra</i> Peters	<i>Hipposideros caffer</i> (Sundevall, 1846)
1853	<i>Pachysoma</i> Temminck	<i>Epomophorus</i> Bennett, 1836
1853	<i>V[esperugo (Vesperugo)] Kuhl</i> Blasius	<i>Pipistrellus kuhlii</i> (Kuhl, 1817)
1854	<i>Rhinopomus</i> Gervais	<i>Rhinopoma</i> E. Geoffroy St.-Hilaire, 1818
1855	Emballonuridae Gervais	EMBALLONURIDAE Gervais, 1855

Appendix 4: Collector Information

All information relating to the collectors of the voucher specimens, which might be useful for find discrepancies between the collector, collection date and locality.

All sub-tables contain the following information: name of collector, collection date, country and locality, museum code and number of specimens. Totals per category are also given.

Appendix 4a: Follow the Collector

Voucher specimen records sorted by the collector and date, allow one to follow the trail of a collector.

Underlined numbers indicate the number of specimens for the locality present in one or more collections. Bold numbers represent the number of specimens for the country, and bold and underlined numbers the totals for the specific date.

22 November 1981: Rwanda: Rukira [=Rukara]: RMCA: 1 [1 - 1 - 1].

Total Specimens for Baeten, Benny; De Vree, Frits; Van Cakenberghe, Victor; and Van der Straeten Erik: 77

Baettcher, J.W.

17 July 1966: Kenya: Kilifi, 2 mi W: WNMU: 1 [1 - 1 - 1].

21 July 1966: Kenya: Sokoke forest: WNMU: 1 [1 - 1 - 1].

Total Specimens for Baettcher, J.W.: 2

Bailey, A.M.

11 October 1926: Ethiopia: Addis Ababa: FMNH: 1 [1 - 1 - 1].

5 March 1927: Ethiopia: Wahina: FMNH: 1 [1 - 1 - 1].

Total Specimens for Bailey, A.M.: 2

Baker

12 October 1981: Tanzania: Kurasini area: SMF: 2 [2 - 2 - 2].

Total Specimens for Baker: 2

Baker, Niel

11 April 1982: Tanzania: Lugoda Tea Estate: SMF: 1 [1 - 1 - 1].

Total Specimens for Baker, Niel: 1

Balme, F.N.

Collection Date Unknown: Namibia: Ngweze: KM: 1 [1 - 1 - 1].

Total Specimens for Balme, F.N.: 1

Bampton, I.

Collection Date Unknown: Tanzania: Tanga: USNM: 3 [3 - 3 - 3].

17 July 1963: Tanzania: Tanga: USNM: 1 [1 - 1 - 1].

Total Specimens for Bampton, I.: 4

Barbe C

5 April 2004: South Africa: Lebanon Sappi plantation: TM: 1 [1 - 1 - 1].

Total Specimens for Barbe C: 1

Barboza du Bocage, José Vicente

Collection Date Unknown: Angola: Benguela: MZUF: 1 [1 - 1 - 1].

Total Specimens for Barboza du Bocage, José Vicente: 1

Barley, Alen H.

Collection Date Unknown: Kenya: Menengai: BMNH: 1 [1 - 1 - 1].

Total Specimens for Barley, Alen H.: 1

Barlow

Collection Date Unknown: Namibia: Liebig's Ranch: TM: 3 [3 - 3 - 3].

29 May 1937: Namibia: Oshikanga: TM: 1 [1 - 1 - 1].

Total Specimens for Barlow: 4

Barlow C

20 June 2001: South Africa: Balule Private Nature Reserve, Oliphants River: TM: 1 [1 - 1 - 1].

Total Specimens for Barlow C: 1

Barlow TM-Expedition, the

29 May 1937: Namibia: Oshikanga: TM: 4 [4 - 4 - 4].

15 August 1937: South Africa: Farm Goodhouse 23: TM: 1 [1 - 1 - 1].

31 August 1937: South Africa: Van Wyksvlei: TM: 6 [6 - 6 - 6].

Total Specimens for Barlow TM-Expedition, the: 11

Barrington, F.M. and Pine, R.H.

21 June 1960: Kenya: Masabubu: CM: 1 [1 - 1 - 1].

Total Specimens for Barrington, F.M. and Pine, R.H.: 1

Barros Machados, A.

Collection Date Unknown: Angola: Dundo Lundo: FMNH: 5 [5 - 5 - 5].

Total Specimens for Barros Machados, A.: 5

Barry, D.H.

Collection Date Unknown: Ghana: Kumasi: BMNH: 1 [1] - Pong Tamale: BMNH: 1 [1 - 2 - 2].
28 October 1960: Ghana: Kumasi-Dunkwa road: BMNH: 1 [1 - 1 - 1].
24 July 1961: Ghana: Tumu area: BMNH: 1 [1 - 1 - 1].
30 July 1963: Ghana: Pong Tamale: BMNH: 1 [1 - 1 - 1].

Total Specimens for Barry, D.H.: 5

Barry, T.

Collection Date Unknown: South Africa: Tierkloof: SAMC: 2 [2 - 2 - 2].

Total Specimens for Barry, T.: 2

Barteville

Collection Date Unknown: Congo (Democratic Republic of the): Boma: RMCA: 1 [1 - 1 - 1].

Total Specimens for Barteville: 1

Bartlett

Collection Date Unknown: Madagascar: no specific locality: ZMB: 2 [2 - 2 - 2].

Total Specimens for Bartlett: 2

Barton, O.

Collection Date Unknown: Chad: Kyabe: AMNH: 1 [1 - 1 - 1].

Total Specimens for Barton, O.: 1

Basilio, Aurelio (Rev.)

Collection Date Unknown: Equatorial Guinea: Banapa: AMNH: 1 [1] - Fernando Po [=Bioko island]: AMNH: 1 [1 - 2 - 2].

Total Specimens for Basilio, Aurelio (Rev.): 2

Baswell

24 February 1984: Tanzania: Lugoda Tea Estate: SMF: 1 [1 - 1 - 1].

Total Specimens for Baswell: 1

Bate, D.M.A.

Collection Date Unknown: Crete: Mount Gova: TM: 1 [1 - 1 - 1].

Total Specimens for Bate, D.M.A.: 1

Bates, G.L.

Collection Date Unknown: Cameroon: Bitey: BMNH: 3, RMCA: 1 [4] - Efulen: BMNH: 8 [8 - 12].
 Congo (Democratic Republic of the): Congo river, 75 mi up: USNM: 1 [1 - 1].

 18 February 1922: Cameroon: Bitye: BMNH: 1 [1 - 1 - 1].

Total Specimens for Bates, G.L. and Rosenberg, G.: 4

Battersby, J.C.

Collection Date Unknown: Kenya: Murri: BMNH: 1 [1 - 1 - 1].

Total Specimens for Battersby, J.C.: 1

Baudon, A.

31 October 1921: Central African Republic: Ouham area: MNHN: 1 [1 - 1 - 1].

Total Specimens for Baudon, A.: 1

Bauer, R.G.

20 January 1965: Kenya: Mweiga, 10 mi NW: YPM: 2 [2 - 2 - 2].

Total Specimens for Bauer, R.G.: 2

Baum, H.

22 October 1968: Kenya: Ruivi: SMF: 1 [1 - 1 - 1].

Total Specimens for Baum, H.: 1

Baumann

Collection Date Unknown: Ghana: Kete: ZMB: 3 [3] - Kete Kratchi: ZMB: 1 [1 - 4].
 Togo: Misahöhe [=Missahohé]: ZMB: 8 [8 - 8 - 12].

Total Specimens for Baumann: 12

Baxter

Collection Date Unknown: Tanzania: Moshi: BMNH: 1 [1 - 1 - 1].

Total Specimens for Baxter: 1

Bayer

20 June 1914: Kenya: Baringo, lake: RMCA: 2 [2 - 2 - 2].

Total Specimens for Bayer: 2

Bayet, P.

Collection Date Unknown: Congo (Democratic Republic of the): Beno: RMCA: 10 [10 - 10 - 10].

Total Specimens for Bayet, P.: 10

Bayliss, J.

16 February 1995: Tanzania: Kwangumi Forest Reserve: SMF: 1 [1 - 1 - 1].
 2 September 1995: Tanzania: Bamba-Mlungi Forest Reserve: SMF: 1 [1 - 1 - 1].

Total Specimens for Bayliss, J.: 2

Bayliss, J. et al. (Frontier-Project)

Collection Date Unknown: Tanzania: Bamba-Mlungi Forest Reserve: SMF: 1 [1 - 1 - 1].

Total Specimens for Bayliss, J. et al. (Frontier-Project): 1

Bayon, E. (dr.)

Collection Date Unknown: Uganda: Bugala island: SMF: 1 [1] - Entebbe: AMNH: 1 [1] - Victoria Nyanza [=Lake Victoria]: AMNH: 1 [1 - 3 - 3].

Total Specimens for Bayon, E. (dr.): 3

Beccari, Odoardo (dr.)

Collection Date Unknown: Egypt: Cairo: ZMB: 1 [1 - 1].
Ethiopia: Abyssinia: ZMB: 1 [1 - 1 - 2].

Total Specimens for Beccari, Odoardo (dr.): 2

Beck

Collection Date Unknown: Namibia: Damaraland: ZMB: 1 [1 - 1 - 1].

Total Specimens for Beck: 1

Becquet

29 December 1927: Congo (Democratic Republic of the): Mukishi: RMCA: 1 [1 - 1 - 1].

Total Specimens for Becquet: 1

Bedford, J.A.H.

Collection Date Unknown: South Africa: Sycamore Station: TM: 1 [1 - 1 - 1].

Total Specimens for Bedford, J.A.H.: 1

Begg

5 January 1964: Zimbabwe: Fairfield park: HZM: 2 [2 - 2 - 2].

Total Specimens for Begg: 2

Belk

Collection Date Unknown: Namibia: Walfischbay [=Walvis Bay]: ZMB: 1 [1 - 1 - 1].

Total Specimens for Belk: 1

Bell and Leakey

Collection Date Unknown: Kenya: Kavirongo Gulf, S coast: BMNH: 1 [1 - 1 - 1].

Total Specimens for Bell and Leakey: 1

Bell, H.W. and Karley

Collection Date Unknown: South Africa: : TM: 1 [1] - Durban: TM: 1 [1 - 2 - 2].
4 February 1923: South Africa: Greytown: TM: 1 [1 - 1 - 1].

Total Specimens for Bell, H.W. and Karley: 3

Bellier, Louis

Collection Date Unknown: Cote D'Ivoire: Ivory Coast: RMCA: 26 [26] - Lamto Ecology Station: RMCA: 1, ZMB: 1 [2 - 28].
Côte d'Ivoire: Adiopodoumé: RMCA: 15 [15 - 15 - 43].

2 December 1925: Congo (Democratic Republic of the): Luluabourg [=Kananga]: BMNH: 1 [1 - 1 - 1].
25 February 1926: Congo (Democratic Republic of the): Luluabourg [=Kananga]: BMNH: 1 [1 - 1 - 1].
11 March 1926: Congo (Democratic Republic of the): Luluabourg [=Kananga]: BMNH: 1 [1 - 1 - 1].

Total Specimens for Callewaert, P.: 53

Callewaert, R

Collection Date Unknown: Congo (Democratic Republic of the): Luluabourg: BMNH: 1 [1 - 1 - 1].

Total Specimens for Callewaert, R: 1

Cansdale, George Soper

Collection Date Unknown: Burkina Faso: Lawra: BMNH: 2 [2 - 2].
 Ghana: Kintampo: BMNH: 1 [1] - Oda: BMNH: 5 [5] - Ofinsu: BMNH: 1 [1] - Winneba: BMNH: 1 [1 - 8 - 10].
19 September 1945: Ghana: Oda: BMNH: 1 [1 - 1 - 1].
21 September 1945: Ghana: Oda: BMNH: 1 [1 - 1 - 1].
3 November 1945: Ghana: Oda: BMNH: 1 [1 - 1 - 1].
17 November 1945: Ghana: Oda: BMNH: 1 [1 - 1 - 1].

Total Specimens for Cansdale, George Soper: 14

Capomazza, I.

19 June 1907: Ethiopia: Saganeiti: MSNG: 1 [1 - 1 - 1].

Total Specimens for Capomazza, I.: 1

Carbone, F.

28 September 1957: Congo (Democratic Republic of the): Jalusaka: RMCA: 1 [1 - 1 - 1].
16 March 1958: Congo (Democratic Republic of the): Ikela: RMCA: 1 [1 - 1 - 1].

Total Specimens for Carbone, F.: 2

Carl, J.

Collection Date Unknown: Tanzania: Bukoba: MHNG: 6 [6] - Kisikka: MHNG: 8 [8 - 14].
 Uganda: Entebbe: MHNG: 1 [1 - 1 - 15].

Total Specimens for Carl, J.: 15

Carleton, Michael D. and Robbins, C. Brain

24 April 1984: Sierra Leone: Fintonia, 5.8 km E: USNM: 1 [1 - 1 - 1].

Total Specimens for Carleton, Michael D. and Robbins, C. Brain: 1

Carlisle, M.

13 September 1926: South Africa: Pretoria North: TM: 1 [1 - 1 - 1].

Total Specimens for Carlisle, M.: 1

Carnap-Querheimb

Collection Date Unknown: Cameroon: Yaounde: ZMB: 1 [1 - 1 - 1].

Total Specimens for Carnap-Querheimb: 1

Carp Expedition

Collection Date Unknown: Zambia: Senanza: TM: 1 [1 - 1].
Zimbabwe: Sabi-Lundi River, S junction: TM: 1 [1 - 1 - 2].

Total Specimens for Carp Expedition: 2

Carp Expedition 1951

Collection Date Unknown: Namibia: Kaoko Otavi: TM: 1 [1 - 1 - 1].

Total Specimens for Carp Expedition 1951: 1

Carp, B.

Collection Date Unknown: Namibia: Nampiri: TM: 1 [1 - 1].
Zimbabwe: Sabi-Lundi junction: KM: 1 [1 - 1 - 2].
7 July 1949: Namibia: Nampiri: KM: 1 [1 - 1 - 1].
9 August 1949: Namibia: Nampiri: KM: 1, TM: 2 [3 - 3 - 3].
5 June 1950: Zimbabwe: Sabi-Lundi junction: TM: 1 [1 - 1 - 1].
23 June 1951: Namibia: Swartbooisdrift: TM: 1 [1 - 1 - 1].

Total Specimens for Carp, B.: 8

Carr, R.D.

Collection Date Unknown: South Africa: Nylstroom: TM: 1 [1 - 1 - 1].

Total Specimens for Carr, R.D.: 1

Carruthers, R.

Collection Date Unknown: Zimbabwe: Gwanda: BMNH: 2 [2 - 2 - 2].
21 January 1906: Kenya: Ruwenzori East: RMCA: 1 [1 - 1 - 1].
23 October 1906: Congo (Democratic Republic of the): Albert, lake: BMNH: 2 [2 - 2 - 2].

Total Specimens for Carruthers, R.: 5

Carter

2 June 1952: Chad: Guidari: AMNH: 3 [3 - 3 - 3].

Total Specimens for Carter: 3

Carter, T. Donald

10 January 1929: Ethiopia: Addis Ababa: AMNH: 1 [1 - 1 - 1].
12 July 1938: Zambia: Balovale: AMNH: 1 [1 - 1 - 1].
24 August 1938: Zambia: Balovale: AMNH: 1 [1 - 1 - 1].
2 September 1938: Zambia: Balovale: AMNH: 1 [1 - 1 - 1].
5 September 1938: Zambia: Balovale: AMNH: 1 [1 - 1 - 1].
21 September 1938: Zambia: Balovale: AMNH: 1 [1 - 1 - 1].
23 September 1938: Zambia: Balovale: AMNH: 2 [2 - 2 - 2].

Collection Date Unknown: Mozambique: Tete: BMNH: 3 [3 - 3].South Africa: Insuzi river: BMNH: 1 [1 - 1 - 4].**14 April 1903:** South Africa: Klipfontein: BMNH: 1 [1 - 1 - 1].**17 April 1903:** South Africa: Klipfontein: BMNH: 1 [1 - 1 - 1].**15 February 1904:** South Africa: Eshowe: BMNH: 1 [1 - 1 - 1].**3 August 1905:** South Africa: Klein Letaba: BMNH: 2 [2 - 2 - 2].**18 August 1905:** South Africa: Klein Letaba: BMNH: 1 [1 - 1 - 1].**24 September 1905:** South Africa: Klein Letaba: BMNH: 1 [1 - 1 - 1].**26 July 1906:** Mozambique: Coguno: BMNH: 1 [1 - 1 - 1].**28 July 1906:** Mozambique: Coguno: BMNH: 1 [1 - 1 - 1].**9 August 1906:** Mozambique: Inhambane: BMNH: 1 [1 - 1 - 1].**11 August 1906:** Mozambique: Inhambane: BMNH: 1 [1 - 1 - 1].**8 September 1906:** Mozambique: Coguno: BMNH: 1 [1 - 1 - 1].**8 May 1907:** Mozambique: Tambarara: BMNH: 6 [6 - 6 - 6].**10 September 1907:** Mozambique: Tete: BMNH: 3 [3 - 3 - 3].**23 August 1908:** Mozambique: Tete: BMNH: 2 [2 - 2 - 2].**24 August 1908:** Mozambique: Coguno: BMNH: 1 [1 - 1 - 1].**29 August 1908:** Mozambique: Coguno: BMNH: 1 [1] - Tete: BMNH: 1 [1 - 2 - 2].**13 September 1908:** Mozambique: Tete: BMNH: 1 [1 - 1 - 1].**14 September 1908:** Mozambique: Tete: BMNH: 1 [1 - 1 - 1].**10 December 1953:** South Africa: Insuzi river: BMNH: 2 [2 - 2 - 2].**11 December 1953:** South Africa: Insuzi river: BMNH: 5 [5 - 5 - 5].**Total Specimens for Grant, C.H.B. (Capt.) and Rudd, C.D.: 39**

Grant, C.H.B. (Capt.; coll), Rudd, C.D. (pres)

17 November 1903: South Africa: Jususie valley [=Insuzi valley]: BMNH: 1 [1 - 1 - 1].**Total Specimens for Grant, C.H.B. (Capt.; coll), Rudd, C.D. (pres): 1**

Grant, C.H.B. (Rudd Expedition)

Collection Date Unknown: Mozambique: Tete: TM: 1 [1 - 1].South Africa: Esperanza [=Beneva] Tunnel: DNSM: 1 [1 - 1 - 2].**Total Specimens for Grant, C.H.B. (Rudd Expedition): 2**

Grant, K.

10 March 1987: South Africa: Pilanesberg National Park: TM: 2 [2 - 2 - 2].**Total Specimens for Grant, K.: 2**

Graub

1 February 1910: Congo (Democratic Republic of the): Uvira: NMW: 1 [1 - 1 - 1].**Total Specimens for Graub: 1**

Graubner, O.F.

22 April 1969: South Africa: Thabazimbi, 16 mi SE: USNM: 10 [10 - 10 - 10].**Total Specimens for Graubner, O.F.: 10**

Grauer, Rudolf

Collection Date Unknown: Burundi?: Russissi, bank [=Rusizi delta]: ZMB: 2 [2 - 2].
 Congo (Democratic Republic of the): Baraka: ZMB: 1 [1] - lake Tanganyika, NW bank: ZMB: 1 [1] - Rutshuru: NMW: 1 [1] - Ukaika: NMW: 2 [2] - Uvira: NMW: 2, ZMB: 4 [6 - 11].
 Tanzania: Tanganyika, lake: ZMB: 2 [2] - Usambara [mountains]: ZMB: 3 [3 - 5].
 Unknown country: Karagwa: ZMB: 6 [6 - 6 - 24].

Total Specimens for Grauer, Rudolf: 24

Grauer, Rudolf (Exped. Finanziert durch Ph. V. Oberlander)

Collection Date Unknown: Congo (Democratic Republic of the): Ukaika: NMW: 3 [3 - 3 - 3].

Total Specimens for Grauer, Rudolf (Exped. Finanziert durch Ph. V. Oberlander): 3

Grauer, Rudolf and Rolle, Hermann

Collection Date Unknown: Congo (Democratic Republic of the): Ruwenzori: ZMB: 1 [1 - 1].
 Uganda: Entebbe: ZMB: 2 [2 - 2 - 3].

Total Specimens for Grauer, Rudolf and Rolle, Hermann: 3

Greaves and Richardson

Collection Date Unknown: South Africa: Burman Bush, North Ridge Road: DNSM: 1 [1 - 1 - 1].

Total Specimens for Greaves and Richardson: 1

Greenberg, Stuart N.

10 January 1958: Uganda: Katwe: CAS: 1 [1 - 1 - 1].
14 July 1958: Uganda: Katwe: CAS: 1 [1 - 1 - 1].
22 July 1958: Kenya: Molo river: CAS: 1 [1 - 1 - 1].
18 August 1958: Kenya: Nairobi: CAS: 1 [1 - 1 - 1].

Total Specimens for Greenberg, Stuart N.: 4

Greyling, A.

Collection Date Unknown: South Africa: P.K. Santa: TM: 1 [1 - 1 - 1].

Total Specimens for Greyling, A.: 1

Griesel, W.J.H.J.

1 June 1987: South Africa: Farm Katrina: TM: 1 [1 - 1 - 1].

Total Specimens for Griesel, W.J.H.J.: 1

Grimbeek, Anton

28 May 1984: South Africa: Old picnic site: TM: 1 [1 - 1 - 1].

Total Specimens for Grimbeek, Anton: 1

Grindley, J.

Collection Date Unknown: South Africa: Table Mountain, Wynberg cave: TM: 1 [1 - 1 - 1].

Total Specimens for Grindley, J.: 1

Grindly, J.R.

Collection Date Unknown: South Africa: Table Mountain, Wynberg cave: TM: 2 [2 - 2 - 2].

Total Specimens for Grindly, J.R.: 2

Groenewald

23 October 1978: South Africa: Pretoria: TM: 1 [1 - 1 - 1].

Total Specimens for Groenewald: 1

Grote

Collection Date Unknown: Tanzania: Mikindani: ZMB: 10 [10 - **10** - 10].

Total Specimens for Grote: 10

Grützner

Collection Date Unknown: South Africa: Gerlachshoop: ZMB: 1 [1 - **1** - 1].

Total Specimens for Grützner: 1

Gruwell, J.A.

17 September 1971: Ghana: Accra, 9 mi NE: CM: 1 [1 - **1** - 1].

23 October 1971: Cote D'Ivoire: Lakota, 15 km N: CM: 1 [1 - **1** - 1].

31 October 1971: Cote D'Ivoire: Bouake, 25 km N: CM: 1 [1 - **1** - 1].

12 November 1971: Cote D'Ivoire: Abidjan, 15 km NW: CM: 1 [1 - **1** - 1].

Total Specimens for Gruwell, J.A.: 4

Gueinzus

Collection Date Unknown: South Africa: Port Natal [=Durban]: ZMB: 1 [1 - **1** - 1].

Total Specimens for Gueinzus: 1

Guilbormod, Jacot

Collection Date Unknown: Lesotho: Teyateyaneng: TM: 2 [2 - **2** - 2].

Total Specimens for Guilbormod, Jacot: 2

Gutteling (Mrs.)

15 April 1970: South Africa: Ndumu Game Reserve: TM: 2 [2 - **2** - 2].

Total Specimens for Gutteling (Mrs.): 2

Guy, G.L.

24 August 1962: Zimbabwe: Zambezi-Cherowe Junction: HZM: 1 [1 - **1** - 1].

Total Specimens for Guy, G.L.: 1

Gyldenstolpe, N.

12 May 1921: Congo (Democratic Republic of the): Moera: RMCA: 1 [1 - **1** - 1].

Total Specimens for Gyldenstolpe, N.: 1

Haacke, W.

22 October 1965: Namibia: Namibia Desert Research Station [= DERU]: TM: 1 [1 - **1** - 1].

Total Specimens for Haacke, W.: 1

Haacke, W. and Prozesky, O.P.M

Collection Date Unknown: Botswana: Drodsky cave: USNM: 3 [3 - **3** - 3].

20 November 1961: Botswana: Tsane: USNM: 10 [10 - **10** - 10].

Total Specimens for Haacke, W. and Prozesky, O.P.M: 13

Haagner, A.K. (Dr.)

Collection Date Unknown: South Africa: Pretoria: TM: 2 [2 - **2** - 2].

Total Specimens for Haagner, A.K. (Dr.): 2

Haagner, G.

Collection Date Unknown: South Africa: Manyeleti Game Reserve, main camp: TM: 2 [2] - Manyeleti, Hermitagie camp: TM: 1 [1 - **3** - 3].

14 February 1987: South Africa: Manyeleti Game Reserve: TM: 1 [1 - 1 - 1].

17 July 1979: Libya: Kouf Park lodge, 3 km S: CM: 1 [1 - 1 - 1].

Total Specimens for Herbert, H.J.: 49

Herdson, D.

Collection Date Unknown: Senegal: Senegal: BMNH: 1 [1 - 1 - 1].

Total Specimens for Herdson, D.: 1

Herholdt, E. and Weber, S.

2 March 1988: South Africa: Waterberg, Farm Klipfontein 54JS: TM: 1 [1 - 1 - 1].
2 March 1989: South Africa: Waterberg, Farm Klipfontein 54JS: TM: 3 [3 - 3 - 3].

Total Specimens for Herholdt, E. and Weber, S.: 4

Herholdt, E.M.

27 February 1990: South Africa: Soutpansberg [= Zoutpansberg], Entabeni State Forest: TM: 9 [9 - 9 - 9].
25 January 1996: South Africa: Soutpansberg [= Zoutpansberg], Entabeni State Forest: TM: 1 [1 - 1 - 1].

Total Specimens for Herholdt, E.M.: 10

Herholdt, K.

Collection Date Unknown: South Africa: Shashi-Limpopo River confluence: TM: 3 [3 - 3 - 3].

Total Specimens for Herholdt, K.: 3

Herselman, J.C.

Collection Date Unknown: South Africa: Norlim mine [=Buxton mine]: KM: 5 [5] - Rocher Pan Nature Reserve [=Rocher pan, Rocherpan]: KM: 1 [1 - 6 - 6].

Total Specimens for Herselman, J.C.: 6

Herselmann, J.

1 November 1978: South Africa: De Hoop Provincial Nature Reserve: TM: 12 [12 - 12 - 12].

Total Specimens for Herselmann, J.: 12

Herzog, A.T.M.

Collection Date Unknown: Congo (Democratic Republic of the): Duma: SMF: 1 [1 - 1 - 1].
1 December 1910: Chad: Chari delta: SMF: 1 [1 - 1 - 1].
20 April 1911: Chad: Melfi: SMF: 5 [5 - 5 - 5].
13 May 1911: Cameroon: Marua: SMF: 1 [1 - 1 - 1].

Total Specimens for Herzog, A.T.M.: 8

Hesse, P.

Collection Date Unknown: Congo (Democratic Republic of the): Boma: SMF: 1 [1] - Netonna: SMF: 3 [3 - 4 - 4].
1 January 1889: Congo (Democratic Republic of the): Banana: SMF: 1 [1 - 1 - 1].

Total Specimens for Hesse, P.: 5

Hesselbarth

Collection Date Unknown: Cameroon: Victoria: ZMB: 1 [1 - 1 - 1].

Total Specimens for Hesselbarth: 1

Heuglin, Theodor (Dr.)

Collection Date Unknown: Eritrea: Keren: SMNS: 2, ZMB: 1 [3 - 3].

Ethiopia: Abyssinia: ZMB: 1 [1] - Adowa: SMNS: 2 [2] - Bellegas-Thal zwischen Simehn und Woggara [=Tal des Belegaz/Belghe]: NMW: 1 [1 - 4].

Sudan: Sennar [=Sennaar]: ZMB: 1 [1 - 1 - 8].

Total Specimens for Heuglin, Theodor (Dr.): 8

Heuglin, Theodor (Dr.). [ex Museum Stuttgart]

Collection Date Unknown: Ethiopia: Abyssinia: ZMB: 2 [2 - 2 - 2].

Total Specimens for Heuglin, Theodor (Dr.). [ex Museum Stuttgart]: 2

Heusgens, Dr.

Collection Date Unknown: Congo (Democratic Republic of the): Congo: RMCA: 1 [1 - 1 - 1].

23 February 1932: Congo (Democratic Republic of the): Mweka: RMCA: 1 [1 - 1 - 1].

Total Specimens for Heusgens, Dr.: 2

Heymons

Collection Date Unknown: Algeria: Biskra: ZMB: 4 [4 - 4 - 4].

Total Specimens for Heymons: 4

Heyneke, B.R.T.

18 June 1940: South Africa: Wildeharthoek: TM: 1 [1 - 1 - 1].

Total Specimens for Heyneke, B.R.T.: 1

Hickman, J.

Collection Date Unknown: Sierra Leone: Sierra Leone: BMNH: 1 [1 - 1 - 1].

Total Specimens for Hickman, J.: 1

Hiernaux, J.

12 September 1946: Congo (Democratic Republic of the): Teturi: KBIN: 1 [1 - 1 - 1].

19 September 1969: Ghana: Kuuni, 48 mi from: ROM: 1 [1 - 1 - 1].
19 October 1971: "Africa": Unknown locality: ROM: 1 [1 - 1 - 1].

Total Specimens for Mensah, P.E.: 21

Menzies, J.J.

Collection Date Unknown: Sierra Leone: Kassewa Forest Reserve: BMNH: 2 [2 - 2 - 2].

Total Specimens for Menzies, J.J.: 2

Merenski

Collection Date Unknown: South Africa: Botshabelo: ZMB: 1 [1 - 1 - 1].

Total Specimens for Merenski: 1

Merfield, F.G.

Collection Date Unknown: Cameroon: Lomie district: BMNH: 1 [1 - 1 - 1].
31 May 1932: Cameroon: Lumbindu: BMNH: 1 [1 - 1 - 1].

Total Specimens for Merfield, F.G.: 2

Mertens, Robert (dr.)

29 September 1952: Namibia: Windhoek: SMF: 1 [1 - 1 - 1].

Total Specimens for Mertens, Robert (dr.): 1

Mesmaeckers, Is.

Collection Date Unknown: Congo (Democratic Republic of the): Banana: RMCA: 7 [7] - Boma: RMCA: 2 [2 - 9 - 9].
12 April 1952: Congo (Democratic Republic of the): Banana: RMCA: 1 [1 - 1 - 1].

Total Specimens for Mesmaeckers, Is.: 10

Methner

Collection Date Unknown: Tanzania: Nangoma cave?: ZMB: 2 [2 - 2 - 2].

Total Specimens for Methner: 2

Meyer, Andre

15 December 1973: South Africa: Farm Klipfontein 407, Echo caves: TM: 5 [5 - 5 - 5].

Total Specimens for Meyer, Andre: 5

Miceli, F.

Collection Date Unknown: Tunisia: Tunis: SMF: 2 [2 - 2 - 2].

Total Specimens for Miceli, F.: 2

Micha, M.

26 November 1947: Congo (Democratic Republic of the): Gangala-na-Bodio: KBIN: 1 [1 - 1 - 1].

Total Specimens for Micha, M.: 1

Michahelles

Collection Date Unknown: Egypt: no specific locality: ZMB: 4 [4 - 4 - 4].

Total Specimens for Michahelles: 4

Milet-Horsin, M.

4 February 1921: Niger: Niger: MNHN: 1 [1 - 1 - 1].

Total Specimens for Milet-Horsin, M.: 1

Miller, N.C.E.

10 June 1947: Zimbabwe: Umtali Old Mine: BMNH: 1 [1 - 1 - 1].

19 October 1948: Zimbabwe: Odzi district: BMNH: 1 [1 - 1 - 1].

Total Specimens for Miller, N.C.E.: 2

Milton

18 September 1949: Malawi: Mwaya: BMNH: 1 [1 - 1 - 1].

Total Specimens for Milton: 1

Minter, D.M.

18 April 1963: Kenya: Naivasha, lake: USNM: 2 [2 - 2 - 2].

Total Specimens for Minter, D.M.: 2

Mischlich

Collection Date Unknown: Ghana: Bimbila: ZMB: 1 [1] - Kete Kratchi: ZMB: 1 [1 - 2].

Unknown country: Napa-ire: ZMB: 1 [1 - 1 - 3].

Total Specimens for Mischlich: 3

Misonne, Xavier

Collection Date Unknown: Congo (Democratic Republic of the): Leopoldville [=Kinshasa]: KBIN: 1 [1 - 1 - 1].

26 March 1966: Congo (Democratic Republic of the): Lubumbashi: RMCA: 1 [1 - 1 - 1].

Total Specimens for Misonne, Xavier: 2

Mission F.A.A.

5 August 1929: Madagascar: Ivohiho: MNHN: 1 [1 - 1 - 1].

Total Specimens for Mission F.A.A.: 1

Mission Frantf...

Collection Date Unknown: "Africa": Northern Africa: SMNS: 1 [1 - 1 - 1].

Total Specimens for Mission Frantf....: 1

Missione Biologica Somalia

26 August 1962: Somalia: Villabruzzo [=Villa del dottore Abruzzi]: MZUF: 1 [1 - 1 - 1].

Total Specimens for Missione Biologica Somalia: 1

Mitchell

29 November 1961: Zimbabwe: Miami, 4 mi E: HZM: 1 [1 - 1 - 1].

Total Specimens for Mitchell: 1

Mitchell, J.P.

4 June 1922: Ethiopia: Bahr der Giorgis: BMNH: 1 [1 - 1 - 1].

Total Specimens for Mitchell, J.P.: 1

Mittendorf, H.

22 August 1967: Namibia: Karibib: ZFMK: 1 [1 - 1 - 1].

27 August 1967: Namibia: Karibib: ZFMK: 3 [3 - 3 - 3].

9 March 1969: Namibia: Windhoek: ZFMK: 3 [3 - 3 - 3].

Total Specimens for Mittendorf, H.: 7

Möbius

Collection Date Unknown: Mauritius: no specific locality: ZMB: 2 [2 - 2 - 2].**Total Specimens for Möbius: 2**

Mochaki, Stephina

Collection Date Unknown: South Africa: Shoshanguve: TM: 1 [1 - 1 - 1].**Total Specimens for Mochaki, Stephina: 1**

Mohr

Collection Date Unknown: South Africa: Port Natal [=Durban]: ZMB: 1 [1 - 1 - 1].**Total Specimens for Mohr: 1**

Möhres, Prof.

Collection Date Unknown: Egypt: : SMNS: 2 [2 - 2 - 2].**Total Specimens for Möhres, Prof.: 2**

Monadjem, Ara (Dr.)

23 May 1990: Malawi: Likabula mission: TM: 2 [2 - 2 - 2].

Total Specimens for Rautenbach, Ignatius L. (Dr.) [=Naas] et al.: 81

Rautenbach, Ignatius L. (Dr.) [=Naas]; Bronner, Gary Neil (Dr.) and Schlitter, Duane A (Dr.)

Collection Date Unknown: South Africa: : TM: 1 [1 - 1 - 1].

7 October 1981: Zimbabwe: Umtali mine adit [=Umtali Old mine]: TM: 1 [1 - 1 - 1].

15 September 1987: South Africa: Farm Oograbies West 153: TM: 1 [1 - 1 - 1].

1 December 1988: South Africa: Cederberg, Algeria State Forest, campsite: TM: 4 [4 - 4 - 4].

2 December 1988: South Africa: Cederberg, Algeria State Forest, campsite: TM: 7 [7 - 7 - 7].

Total Specimens for Rautenbach, Ignatius L. (Dr.) [=Naas]; Bronner, Gary Neil (Dr.) and Schlitter, Duane A (Dr.): 14

Rautenbach, Ignatius L. (Dr.) [=Naas]; Bronner, Gary Neil (Dr.) and Weber

1 October 1987: South Africa: Farm Wagondrift 230: TM: 3 [3 - 3 - 3].

2 October 1987: South Africa: Farm Wagondrift 230: TM: 7 [7 - 7 - 7].

Total Specimens for Rautenbach, Ignatius L. (Dr.) [=Naas]; Bronner, Gary Neil (Dr.) and Weber: 10

Rautenbach, Ignatius L. (Dr.) [=Naas]; de Jager and de Graaff

22 January 1979: South Africa: Karoo National Park: TM: 2 [2 - 2 - 2].

Total Specimens for Rautenbach, Ignatius L. (Dr.) [=Naas]; de Jager and de Graaff: 2

Rautenbach, Ignatius L. (Dr.) [=Naas]; Dippenaar, Nico J. (Dr.) and Underwood

7 April 1973: South Africa: Loskopdam Nature Reserve: TM: 1 [1 - 1 - 1].

Total Specimens for Rautenbach, Ignatius L. (Dr.) [=Naas]; Dippenaar, Nico J. (Dr.) and Underwood: 1

Rautenbach, Ignatius L. (Dr.) [=Naas]; Wolhuter, D.A. and Coetzee, C.G.

28 October 1980: Namibia: Swartkop: TM: 2 [2 - 2 - 2].

Total Specimens for Rautenbach, Ignatius L. (Dr.) [=Naas]; Wolhuter, D.A. and Coetzee, C.G.: 2

Rautenberg

8 February 1899: Tanzania: Dar es Salaam: ZMH: 1 [1 - 1 - 1].

Total Specimens for Rautenberg: 1

Raven, H.C.

20 October 1919: South Africa: Ottershoop: USNM: 1 [1 - 1 - 1].

Total Specimens for Raven, H.C.: 1

Reck

Collection Date Unknown: Tanzania: Tendaguru [=Tendaguro]: ZMB: 1 [1] - Tendoguru: ZMB: 2 [2 - 3 - 3].

Total Specimens for Reck: 3

Rees, A.F. and Start, A.N.

26 February 1964: Tanzania: Muhange: BMNH: 1 [1 - 1 - 1].

Total Specimens for Rees, A.F. and Start, A.N.: 1

Rees, A.F.?

10 June 1958: Tanzania: Mbemba: SMF: 1 [1 - 1 - 1].

19 December 1958: Tanzania: Kilosa: HZM: 1 [1 - 1 - 1].

17 January 1959: Tanzania: Kilosa: HZM: 1 [1 - 1 - 1].

7 February 1959: Tanzania: Kichanjane: HZM: 1 [1 - 1 - 1].

7 May 1959: Tanzania: Igalula: HZM: 1 [1 - 1 - 1].

4 October 1961: Tanzania: Lukoga: HZM: 1 [1 - 1 - 1].

24 January 1962: Tanzania: Kilosa: ZFMK: 1 [1 - 1 - 1].

Total Specimens for Rees, A.F.?: 7

Regner

Collection Date Unknown: Tanzania: Pangani river: ZMB: 1 [1 - 1 - 1].

Total Specimens for Regner: 1

Reichenow

Collection Date Unknown: Cameroon: Ajos Höhe [=Ayos Heights]: ZMB: 2 [2] - no specific locality: ZMB: 1 [1 - 3].
Ghana: Abokobi: ZMB: 3 [3] - Accra: ZMB: 5 [5] - Aguapim: ZMB: 1 [1 - 9 - 12].

Total Specimens for Reichenow: 12

Reid, C.J.

29 January 1978: Nigeria: Alimbo Ferry Road: BMNH: 1 [1 - 1 - 1].

Total Specimens for Reid, C.J.: 1

Reimer

Collection Date Unknown: German East Africa: : ZMB: 1 [1 - 1 - 1].

Total Specimens for Reimer: 1

Reitter, Mlle

Collection Date Unknown: Congo (Democratic Republic of the): Ibambi: RMCA: 2 [2 - 2 - 2].

Total Specimens for Reitter, Mlle: 2

Rendall, Percy (dr.)

Collection Date Unknown: South Africa: Kaap river: BMNH: 1 [1 - 1].

The Gambia: Bathurst [=Banjul]: BMNH: 3 [3] - Gambia: BMNH: 1 [1 - 4 - 5].

4 April 1839: The Gambia: Gambia river: BMNH: 1 [1 - 1 - 1].

25 April 1895: Malawi: Fort Johnston: BMNH: 1 [1 - 1 - 1].

28 April 1895: Malawi: Fort Johnston: BMNH: 1 [1 - 1 - 1].

14 June 1895: Malawi: Shire river, upper: SMTD: 1 [1 - 1 - 1].

5 September 1895: Malawi: Shire river, upper: BMNH: 1 [1 - 1 - 1].

Total Specimens for Rendall, Percy (dr.): 10

Retzlaff, M.

17 June 1910: Cameroon: Bibundi: ZMH: 1 [1 - 1 - 1].

Total Specimens for Retzlaff, M.: 1

Revoil

Collection Date Unknown: Somalia: Somalia: MNHN: 4 [4 - 4 - 4].

Total Specimens for Revoil: 4

Rex, J.H.

Collection Date Unknown: South Africa: Knysna: TM: 5 [5 - 5 - 5].
1 February 1909: South Africa: Knysna: TM: 1 [1 - 1 - 1].

Total Specimens for Rex, J.H.: 6

Rhode

Collection Date Unknown: Cameroon: Murkoryé: MHNG: 1 [1 - 1 - 1].

Total Specimens for Rhode: 1

Richard, Dr.

Collection Date Unknown: Congo (Democratic Republic of the): Leopoldville [=Kinshasa]: RMCA: 1 [1] - Lubumbashi: RMCA: 1 [1 - 2 - 2].

Total Specimens for Richard, Dr.: 2

Richards, G.

Collection Date Unknown: South Africa: Gillets: DNSM: 1 [1 - 1 - 1].
21 July 1959: South Africa: Gillets: DNSM: 1 [1 - 1 - 1].

Total Specimens for Richards, G.: 2

Richardson and Kearney, Teresa Catherine (Dr.)

Collection Date Unknown: South Africa: Pietermaritzburg: DNSM: 1 [1 - 1 - 1].

Total Specimens for Richardson and Kearney, Teresa Catherine (Dr.): 1

Richardson and Mari

Collection Date Unknown: South Africa: Westville: DNSM: 1 [1 - 1 - 1].

Total Specimens for Richardson and Mari: 1

Richardson, E.

Collection Date Unknown: South Africa: : TM: 1 [1] - Pinetown: DNSM: 1 [1 - 2 - 2].

Total Specimens for Richardson, E.: 2

Richardson, E.J.

Collection Date Unknown: South Africa: Durban, University of Natal campus: DNSM: 1 [1 - 1 - 1].

Total Specimens for Richardson, E.J.: 1

Richardson, P.

Collection Date Unknown: Namibia: Namibia Desert Research Station [= DERU]: TM: 2 [2 - 2 - 2].
1 August 1977: Namibia: Namibia Desert Research Station [= DERU]: TM: 10 [10 - 10 - 10].

Total Specimens for Richardson, P.: 12

Richers

Collection Date Unknown: Togo: no specific locality: ZMB: 1 [1 - 1 - 1].

Total Specimens for Richers: 1

Rigaux, P. and Louette, Michel

27 February 1980: Liberia: LTC Camp: RMCA: 1 [1 - 1 - 1].
3 March 1980: Liberia: LTC Camp: RMCA: 1 [1 - 1 - 1].

Total Specimens for Rigaux, P. and Louette, Michel: 2

Riggenbach

Collection Date Unknown: Cameroon: no specific locality: ZMB: 2 [2 - 2].
Senegal: Ndoro: ZMB: 2 [2] - No specific locality: ZMB: 1 [1] - Thiès: ZMB: 4 [4 - 7 - 9].

Total Specimens for Riggenbach: 9

Rippenbach

Collection Date Unknown: Senegal: Thiès: BMNH: 1 [1 - 1 - 1].

Total Specimens for Rippenbach: 1

Risser, A.C.

20 November 1963: Namibia: Namibia Desert Research Station [= DERU]: USNM: 1 [1 - 1 - 1].
8 December 1963: South Africa: Springbok, 7 mi W: USNM: 1 [1 - 1 - 1].
12 December 1963: South Africa: Springbok, 7 mi W: USNM: 1 [1 - 1 - 1].
20 March 1964: South Africa: Glen: USNM: 7 [7 - 7 - 7].

Total Specimens for Risser, A.C.: 10

Robb, Dr. A.

Collection Date Unknown: Tanzania: Zanzibar: BMNH: 4 [4 - 4 - 4].

Total Specimens for Robb, Dr. A.: 4

Robb, Dr. A. (coll.), Smith, dr. J. (pres)

Collection Date Unknown: Nigeria: Calabar: BMNH: 1 [1] - Old Calabar: BMNH: 1 [1 - 2 - 2].

Total Specimens for Robb, Dr. A. (coll.), Smith, dr. J. (pres): 2

Robbins, C. Brian

Taylor, Peter John (Dr.) and White, Wendy

- Collection Date Unknown:** South Africa: Nkandla Forest Reserve: DNSM: 2 [2 - 2 - 2].
12 August 2003: South Africa: Mantuma Camp, camp pool: DNSM: 1 [1 - 1 - 1].

Total Specimens for Taylor, Peter John (Dr.) and White, Wendy: 3

Taylor, Peter John (Dr.) et al.

- Collection Date Unknown:** South Africa: Ghost Mountain: DNSM: 2 [2 - 2 - 2].
10 August 1995: South Africa: Bube pan: DNSM: 7 [7 - 7 - 7].
11 August 1995: South Africa: Bube pan: DNSM: 2 [2 - 2 - 2].
12 August 1995: South Africa: Bube pan: DNSM: 4 [4] - Msinga Hide: DNSM: 2 [2 - 6 - 6].
13 August 1995: South Africa: Msinga Hide: DNSM: 4 [4 - 4 - 4].
14 August 1995: South Africa: Pongolapoort Dam [=Pongola dam], dams inspection tunnels: DNSM: 11 [11 - 11 - 11].

Total Specimens for Taylor, Peter John (Dr.) et al.: 32

Taylor, Peter John (Dr.); Jacobs, David S. (Dr.); et al.

- Collection Date Unknown:** South Africa: Pongola Biosphere Reserve, Mpalane Lodge: DNSM: 5 [5] - Pongola River Bridge: DNSM: 17 [17 - 22 - 22].
7 October 1980: South Africa: Pongola River Bridge: DNSM: 1 [1 - 1 - 1].
28 November 1997: South Africa: Pongolapoort Dam [=Pongola dam], dams inspection tunnels: DNSM: 7 [7 - 7 - 7].

Total Specimens for Taylor, Peter John (Dr.); Jacobs, David S. (Dr.); et al.: 30

Taylor, Peter John (Dr.); Kearney, Teresa Catherine (Dr.) and Mari

- Collection Date Unknown:** South Africa: Bonamanzi Game Reserve: DNSM: 11 [11] - Mission Rocks: DNSM: 3 [3] - St. Lucia, Eastern Shores: DNSM: 4 [4 - 18 - 18].

Total Specimens for Taylor, Peter John (Dr.); Kearney, Teresa Catherine (Dr.) and Mari: 18

Taylor, R.H.

- Collection Date Unknown:** Tanzania: Ambani caves: TM: 3 [3 - 3 - 3].
18 November 1961: Zambia: Sikongo: FMNH: 1 [1 - 1 - 1].
5 December 1961: Zambia: Sihole: FMNH: 1 [1 - 1 - 1].
4 April 1965: Tanzania: Amani: TM: 1 [1 - 1 - 1].

Total Specimens for Taylor, R.H.: 6

Tembo, I.

Collection Date Unknown: South Africa: Langebaanweg, Chemfos mine: SAMC: 1 [1 - 1 - 1].

Total Specimens for Tembo, I.: 1

Terlingen, Robert

Collection Date Unknown: South Africa: Bryanston, 883 Lowndees Road: TM: 1 [1 - 1 - 1].

Total Specimens for Terlingen, Robert: 1

Tessmann

Collection Date Unknown: Cameroon: Bafia area: ZMB: 1 [1] - Bebai: ZMB: 2 [2] - Bosum [syn Bozum], Uam: ZMB: 8 [8 - 11].

Equatorial Guinea: Nkolentangan: ZMB: 2 [2 - 2].

Ghana: Kojali Bach: ZMB: 1 [1 - 1 - 14].

Total Specimens for Tessmann: 14

The Mines, L. and Smith, D.

Collection Date Unknown: South Africa: Pretoria: TM: 1 [1 - 1 - 1].

Total Specimens for The Mines, L. and Smith, D.: 1

Thellon, M.

Collection Date Unknown: "Congo": : MNHN: 2 [2 - 2 - 2].

Total Specimens for Thellon, M.: 2

Théoneste

7 February 1985: Rwanda: Gafumba: RMCA: 1 [1 - 1 - 1].

Total Specimens for Théoneste: 1

Thierry

Collection Date Unknown: Congo (Democratic Republic of the): Gandu: ZMB: 1 [1 - 1].

Togo: Mango [=Sansanné-Mango]: ZMB: 2 [2 - 2 - 3].

Total Specimens for Thierry: 3

Thollon, Mr.

Collection Date Unknown: Congo: Congo [Brazzaville]: MNHN: 1 [1 - 1 - 1].

Total Specimens for Thollon, Mr.: 1

Thomas

Collection Date Unknown: Kenya: Takaungu: ZMB: 6 [6 - 6 - 6].

21 August 1979: Cote D'Ivoire: Foro Foro: HZM: 2 [2 - 2 - 2].

Total Specimens for Thomas: 8

Thomas, Dr. Felix

23 April 1903: Kenya: Nairobi: NMW: 1 [1 - 1 - 1].

Total Specimens for Thomas, Dr. Felix: 1

Thys Van den Audenaerde, Dirk

15 November 1964: Gabon: Lambaréné: RMCA: 2 [2 - 2 - 2].

Total Specimens for Thys Van den Audenaerde, Dirk: 2

Thys Van den Audenaerde, Dirk and Verheyen, Walter N.

Collection Date Unknown: Cote D'Ivoire: Flampleu: RMCA: 2 [2 - 2 - 2].

16 July 1966: Côte d'Ivoire: Adiopodoumé: RMCA: 1 [1 - 1 - 1].

25 July 1966: Cote D'Ivoire: Flampleu: RMCA: 1 [1 - 1 - 1].

2 August 1966: Cote D'Ivoire: Saibly: RMCA: 1 [1] - Toyebli: RMCA: 1 [1 - 2 - 2].

3 August 1966: Cote D'Ivoire: Toyebli: RMCA: 2 [2 - 2].

Côte d'Ivoire: Adiopodoumé: RMCA: 1 [1 - 1 - 3].

24 August 1966: Cote D'Ivoire: Doropo: RMCA: 1 [1 - 1 - 1].

Total Specimens for Thys Van den Audenaerde, Dirk and Verheyen, Walter N.: 10

Tibesti Expedition

Collection Date Unknown: Chad: Tibesti: RMCA: 2 [2 - 2 - 2].

Total Specimens for Tibesti Expedition: 2

Tiessler

Collection Date Unknown: Unkown country: Chifumbaze: ZMB: 3 [3 - 3 - 3].

Total Specimens for Tiessler: 3

Timmins, R.J.

11 August 1990: Ethiopia: Kulfo river: HZM: 1 [1 - 1 - 1].

Total Specimens for Timmins, R.J.: 1

Tinant, Mme

Collection Date Unknown: Congo (Democratic Republic of the): Leverville: RMCA: 1 [1 - 1 - 1].

Total Specimens for Tinant, Mme: 1

TM Expedition

Collection Date Unknown: Zimbabwe: Chirinda forest: TM: 1 [1] - Rusito Forest: TM: 2 [2 - 3 - 3].

Total Specimens for TM Expedition: 3

Tomes Collection

Collection Date Unknown: "Africa": Unknown locality: BMNH: 1 [1 - 1].

The Gambia: Gambia: BMNH: 2 [2 - 2 - 3].

Total Specimens for Tomes Collection: 3

Tomkinson, T.

15 December 1983: South Africa: Mkuzi Game Reserve: TM: 1 [1 - 1 - 1].

Total Specimens for Tomkinson, T.: 1

Tose, Frank

6 September 1930: Zambia: Chambezi: CAS: 2 [2 - 2 - 2].

Total Specimens for Tose, Frank: 2

Toulson, Museum Bocage

Collection Date Unknown: Angola: no specific locality: ZMB: 1 [1 - 1 - 1].

Total Specimens for Toulson, Museum Bocage: 1

Tousseau, dr.

Collection Date Unknown: Djibouti: Obock: MNHN: 3 [3 - 3 - 3].

Total Specimens for Tousseau, dr.: 3

TPA

18 June 1989: South Africa: Hans Merensky Nature Reserve: TM: 4 [4 - 4 - 4].

Total Specimens for TPA: 4

TPA Nature Conservation

Collection Date Unknown: South Africa: Boskop Dam Nature Reserve: TM: 2 [2] - Shashi-Limpopo River confluence: TM: 2 [2 - 4 - 4].

Total Specimens for TPA Nature Conservation: 4

Tr. z. U., Mr. Ad.

Collection Date Unknown: Congo (Democratic Republic of the): Duma: ZMH: 2 [2 - 2 - 2].

Total Specimens for Tr. z. U., Mr. Ad.: 2

Tranier, Michel et al.

12 February 1994: Mali: Samaye: MNHN: 1 [1 - 1 - 1].

Total Specimens for Tranier, Michel et al.: 1

Transvaal Museum

7 June 1973: South Africa: Transvaal Museum workshop: TM: 1 [1 - 1 - 1].

Total Specimens for Transvaal Museum: 1

Transvaal Museum Expedition

Collection Date Unknown: South Africa: Farm Secheili's Oude Stad 6: TM: 1 [1 - 1].

Zimbabwe: Chikupo Caves: TM: 1 [1] - Zimbabwe ruins: TM: 1 [1 - 2 - 3].

7 October 1981: Zimbabwe: Umtali mine adit [=Umtali Old mine]: TM: 26 [26 - 26 - 26].

17 October 1981: Zimbabwe: Umtali mine adit [=Umtali Old mine]: TM: 4 [4 - 4 - 4].

17 November 1981: Zimbabwe: Umtali mine adit [=Umtali Old mine]: TM: 8 [8 - 8 - 8].

Total Specimens for Transvaal Museum Expedition: 41

Traub and Ash, J.S.

Collection Date Unknown: Ethiopia: Koka: CM: 5 [5 - 5 - 5].

24 February 1973: Ethiopia: Koka: CM: 1 [1 - 1 - 1].

25 February 1973: Ethiopia: Koka: CM: 1 [1 - 1 - 1].

Total Specimens for Traub and Ash, J.S.: 7

Traylor, M.A.

Collection Date Unknown: Zambia: Lueti River, S: FMNH: 1 [1] - Sihole: FMNH: 3 [3] - Sikongo: FMNH: 2 [2 - 6 - 6].

Total Specimens for Traylor, M.A.: 6

Tree, A.J.

Collection Date Unknown: Zambia: Kafue River: FMNH: 1, NHMZ: 4 [5] - Lochinvar Ranch: NHMZ: 2 [2] - Mindolo dam:

NHMZ: 2 [2] - Mkwisi: NHMZ: 3 [3] - Mwekera: NHMZ: 2 [2] - Pwira Pan: BMNH: 1, NHMZ: 4 [5] - Wusikili Bridge:

NHMZ: 1 [1] - XXX: NHMZ: 1 [1 - 21 - 21].

2 September 1962: Zambia: Nkane-Kitwe: NHMZ: 1 [1 - 1 - 1].

17 August 1963: Zambia: Pwira Pan: BMNH: 1 [1 - 1 - 1].

25 August 1963: Zambia: Machiya ferry: BMNH: 1 [1 - 1 - 1].

Total Specimens for Tree, A.J.: 24

Trevor-Roper, G.D.

Collection Date Unknown: Kenya: Kilifi: BMNH: 1 [1 - 1 - 1].

Total Specimens for Trevor-Roper, G.D.: 1

Tribe, A.R.

Collection Date Unknown: Somalia: Dowa: BMNH: 1 [1 - 1 - 1].

Total Specimens for Tribe, A.R.: 1

Tristram, H.B.J. (Rév.)

Collection Date Unknown: Egypt: Jabal Musa: BMNH: 1 [1 - 1 - 1].

Total Specimens for Tristram, H.B.J. (Rév.): 1

Trujillo, Domingo

1 September 1987: Canary Islands [Spain]: La Guancha, "Barranco de La Cantera": MNHN: 1 [1 - 1 - 1].

Total Specimens for Trujillo, Domingo: 1

Tucker, Mr. J.J.

19 January 1973: Zambia: Kabulonga: HZM: 1 [1 - 1 - 1].

Total Specimens for Tucker, Mr. J.J.: 1

Turco, Dr.

1 January 1950: Congo (Democratic Republic of the): Kere Kere: RMCA: 2 [2 - 2 - 2].

Total Specimens for Turco, Dr.: 2

Turnbull, J.K.

29 December 1932: South Africa: Kaggasmoudt: NM: 1 [1 - 1 - 1].

Total Specimens for Turnbull, J.K.: 1

Turner, A.

Collection Date Unknown: Kenya: Yala river: NRM: 1 [1 - 1 - 1].

5 October 1915: Kenya: Yale River: NMK: 2 [2 - 2 - 2].

20 October 1915: Kenya: Yale River: NMK: 3 [3 - 3 - 3].

9 November 1915: Kenya: Yala river: NRM: 1 [1 - 1 - 1].

10 November 1915: Kenya: Yala river: NRM: 3 [3 - 3 - 3].

11 November 1915: Kenya: Yala river: NRM: 1 [1 - 1 - 1].

12 November 1915: Kenya: Yala river: NRM: 1 [1 - 1 - 1].

13 November 1915: Kenya: Yala river: NRM: 4 [4 - 4 - 4].

19 November 1915: Kenya: Yala river: NRM: 2 [2 - 2 - 2].

30 November 1915: Kenya: Yala river: NRM: 1 [1 - 1 - 1].

Total Specimens for Turner, A.: 19

Turner, H.J.A.

9 November 1913: Kenya: Yala river: BMNH: 1 [1 - 1 - 1].

13 November 1913: Kenya: Yala river: USNM: 1 [1 - 1 - 1].

18 November 1913: Kenya: Yala river: USNM: 1 [1 - 1 - 1].

20 November 1913: Kenya: Yala river: USNM: 1 [1 - 1 - 1].

Total Specimens for Turner, H.J.A.: 4

Twomey, A.C.

Collection Date Unknown: Kenya: Karibiti: CM: 3 [3] - Shimoni: CM: 1 [1 - 4 - 4].

23 July 1960: Uganda: Bwamba Forest: CM: 2 [2 - 2 - 2].

15 September 1960: Tanzania: Morogoro, 20 mi N: CM: 1 [1 - 1 - 1].

Total Specimens for Twomey, A.C.: 7

Uhlenhuth

Collection Date Unknown: Ethiopia: Dire Dawa: ZMB: 2 [2 - 2 - 2].

Total Specimens for Uhlenhuth: 2

Uhlenruth

16 April 1936: Ethiopia: Dire Daoua [=Dire Dawa]: RMCA: 1 [1 - 1 - 1].

6 June 1936: Ethiopia: Dire Daoua [=Dire Dawa]: RMCA: 1 [1 - 1 - 1].

Total Specimens for Uhlenruth: 2

Umlauff

Collection Date Unknown: Gabon: no specific locality: ZMB: 1 [1 - 1 - 1].

Total Specimens for Umlauff: 1

Unger

Collection Date Unknown: Ghana: Accra: ZMB: 6 [6 - 6 - 6].

Total Specimens for Unger: 6

University of Cape Town

5 August 1966: South Africa: Wynberg cave: SAMC: 1 [1 - 1 - 1].

Total Specimens for University of Cape Town: 1

University Venda Staff

Collection Date Unknown: South Africa: Huhea cave: TM: 3 [3 - 3 - 3].

Total Specimens for University Venda Staff: 3

Uys, J.M.C.

Collection Date Unknown: Zambia: Kaungashi stream, source of: BMNH: 1 [1 - 1 - 1].

Total Specimens for Uys, J.M.C.: 1

Uys, K.

Collection Date Unknown: South Africa: Cape Vidal: DNSM: 2 [2 - 2 - 2].

Total Specimens for Uys, K.: 2

Uys, P.J.

6 April 1973: South Africa: Farm Bordeaux: TM: 1 [1 - 1 - 1].

8 April 1973: South Africa: Bordeaux Farm: TM: 1 [1] - Farm Bordeaux: TM: 3 [3 - 4 - 4].

Total Specimens for Uys, P.J.: 5

v. Heuglin

Collection Date Unknown: Ethiopia: Adowa: SMNS: 1 [1 - 1 - 1].

Total Specimens for v. Heuglin: 1

V.L.K.E.

Collection Date Unknown: Botswana: Maun: TM: 2 [2 - 2 - 2].

Total Specimens for V.L.K.E.: 2

Vaden, R.E.

Collection Date Unknown: Burkina Faso: Azly: USNM: 1 [1] - Boussouma, 5 km N: USNM: 2 [2] - Cella, 1 km N: USNM: 2 [2] - Founzan: USNM: 9 [9] - Koutoura, 5 km SW: USNM: 5 [5] - Natiaboani: USNM: 2 [2] - Ouagadougou: USNM: 7 [7] - Ougarou: USNM: 7 [7 - 35].

 19 July 1916: Malawi: Chiromo: BMNH: 2 [2 - 2 - 2].
 23 July 1916: Malawi: Chiromo: BMNH: 1, KU: 1 [2 - 2 - 2].
 2 October 1916: Malawi: Chiromo: BMNH: 1 [1 - 1 - 1].
 18 December 1916: Malawi: Chiromo: BMNH: 1 [1 - 1 - 1].
 7 May 1918: Malawi: Chiromo: BMNH: 1 [1 - 1 - 1].
 3 August 1919: Malawi: Chiromo: BMNH: 1 [1 - 1 - 1].

Total Specimens for Wood, Rodney C., Esq.: 31

Woosnam, R.B.

Collection Date Unknown: Botswana: Ngami, lake: BMNH: 1 [1 - 1 - 1].
 19 April 1904: South Africa: Kuruman: BMNH: 1 [1 - 1 - 1].
 22 January 1906: Uganda: Ruwenzori East: USNM: 1 [1 - 1 - 1].
 11 May 1906: Congo (Democratic Republic of the): Ruwenzori SE: BMNH: 1 [1 - 1 - 1].

Total Specimens for Woosnam, R.B.: 4

Worth

Collection Date Unknown: Tanzania: Dar-es-Salaam: ZMB: 1 [1 - 1 - 1].

Total Specimens for Worth: 1

Wortzel, J.

Collection Date Unknown: South Africa: Pretoria: TM: 1 [1 - 1 - 1].

Total Specimens for Wortzel, J.: 1

Wright and Rautenbach, Ignatius L. (Dr.) [=Naas]

15 October 1981: Zimbabwe: Rustio River: TM: 1 [1 - 1 - 1].
 17 October 1981: Zimbabwe: Umtali mine adit [=Umtali Old mine]: TM: 2 [2 - 2 - 2].
 26 October 1981: Zimbabwe: Chirisa cave: TM: 1 [1] - Sengwa Wildlife area: NHMZ: 1 [1 - 2 - 2].
 29 October 1981: Zimbabwe: Falls road: TM: 16 [16 - 16 - 16].
 1 November 1981: Zimbabwe: Rhodes Matopos national park: NHMZ: 1 [1 - 1 - 1].

Total Specimens for Wright and Rautenbach, Ignatius L. (Dr.) [=Naas]: 22

Wright, Peter J.

28 February 1975: Namibia: Namibia Desert Research Station [=DERU]: NHMZ: 1 [1 - 1 - 1].

Total Specimens for Wright, Peter J.: 1

Yunker, C.E. and Hoogstraal, Harry H.

22 August 1956: Uganda: Kigumba: FMNH: 1 [1 - 1 - 1].**Total Specimens for Yunker, C.E. and Hoogstraal, Harry H.: 1**

Zaphiro, Ph.C. (coll), McMillan, W.N., Esq. (pres).

Collection Date Unknown: Ethiopia: Addis Ababa and Lake Rudolf, between: BMNH: 1 [1 - 1 - 1].**Total Specimens for Zaphiro, Ph.C. (coll), McMillan, W.N., Esq. (pres): 1**

Zech, Graf

Collection Date Unknown: Ghana: Kete Krachi: ZMB: 6 [6] - Kete Kratchi: ZMB: 4 [4 - 10].Togo: no specific locality: ZMB: 12 [12 - 12 - 22].**Total Specimens for Zech, Graf: 22**

Zedlitz

Collection Date Unknown: Algeria: Umasch [=Oumach]: ZMB: 1 [1 - 1 - 1].**Total Specimens for Zedlitz: 1**

Zeller, Leydig

Collection Date Unknown: Guinea: no specific locality: ZMB: 1 [1 - 1 - 1].**Total Specimens for Zeller, Leydig: 1**

Zenker

Collection Date Unknown: Cameroon: Bipindi, Kribi, Bez: ZMB: 47 [47] - no specific locality: ZMB: 4 [4] - Yaounde: ZMB: 5 [5 - 56 - 56].**Total Specimens for Zenker: 56**

Zerny

1 January 1936: Tanzania: Ugano plantation: NMW: 1 [1 - 1 - 1].**Total Specimens for Zerny: 1**

Zimmer, J.T.

14 August 1926: Tanzania: Dar es Salaam: FMNH: 2 [2 - 2 - 2].**18 October 1926:** Tanzania: Ulanga: FMNH: 1 [1 - 1 - 1].**9 December 1926:** Congo (Democratic Republic of the): Katobwe: FMNH: 1 [1 - 1 - 1].**24 December 1926:** Congo (Democratic Republic of the): Kabengere: FMNH: 1 [1 - 1 - 1].**22 March 1927:** Uganda: Masindi: FMNH: 1 [1 - 1 - 1].**28 March 1927:** Uganda: Rhino Camp: FMNH: 1 [1 - 1 - 1].**24 June 1938:** Tanzania: Ugano plantation: NMW: 1 [1 - 1 - 1].**Total Specimens for Zimmer, J.T.: 8**

Zink, G.

30 May 1952: Tanzania: Usangi: SMNS: 1 [1 - 1 - 1].**14 July 1952:** Tanzania: Misingi: SMNS: 1 [1 - 1 - 1].**9 September 1952:** Tanzania: Nashallo: SMNS: 1 [1 - 1 - 1].**Total Specimens for Zink, G.: 3**

Zoo Antwerpen

17 October 1950: "Congo": : KBIN: 1 [1 - 1 - 1].**Total Specimens for Zoo Antwerpen: 1**

Zoological Survey

Collection Date Unknown: South Africa: Onderstepoort: TM: 2 [2 - 2 - 2].

Total Specimens for Zoological Survey: 2

Zumpt, F. (dr.)

Collection Date Unknown: Botswana: Kanye: ZFMK: 4 [4 - 4].

Namibia: Namibia: SMNS: 3 [3] - Outjo: BMNH: 3, SMNS: 2 [5 - 8].

Tanzania: Kondo: ZMB: 2 [2 - 2 - 14].

1 March 1952: South Africa: Marone: BMNH: 1 [1 - 1 - 1].

1 January 1953: South Africa: Nelspruit: SMNS: 1 [1 - 1 - 1].

25 April 1953: South Africa: Nelspruit: SMNS: 1 [1 - 1 - 1].

19 January 1956: Botswana: Dibete: SMNS: 1 [1 - 1 - 1].

15 April 1961: Namibia: Windhoek: ZFMK: 2 [2 - 2 - 2].

9 March 1965: South Africa: Hluhluwe Game Reserve: ZFMK: 1 [1 - 1 - 1].

5 April 1965: South Africa: Hluhluwe Game Reserve: ZFMK: 2 [2 - 2 - 2].

Total Specimens for Zumpt, F. (dr.): 23

Grand total: 24891

Appendix 4b: Chronological

Voucher specimen records sorted by collection date, country and locality and collector.

Underlined numbers indicate the number of specimens collected by a collector. Bold numbers represent the number of specimens for the locality, and bold and underlined numbers represent the totals for the specific country.

Total Specimens for Collection Date Unknown: 9795

1 July 1834

Ethiopia: Simien mountains: Rüppell, Edward (dr.): SMF: 1 [1 - 1 - 1].

Total Specimens for 1 July 1834: 1

17 July 1838

Botswana: Artesia: ? : Collector Unknown: ZFMK: 1 [1 - 1 - 1].

Total Specimens for 17 July 1838: 1

4 April 1839

The Gambia: Gambia river: ?: Collector Unknown: BMNH: 1 [1]; Rendall, Percy (dr.): BMNH: 1 [1 - 2 - 2].

Total Specimens for 4 April 1839: 2

1 January 1840

Sudan: Sennar [=Sennaar]: Rüppell, Edward (dr.): SMF: 1 [1 - 1 - 1].

The Gambia: Gambia: Steinmann: SMNS: 1 [1 - 1 - 1].

Total Specimens for 1 January 1840: 2

27 November 1842

South Africa: Tugela river: Wahlberg, J. (Stockholm Museum): NRM: 1 [1 - 1 - 1].

Total Specimens for 27 November 1842: 1

27 November 1843

South Africa: Tugela river: ?: Collector Unknown: NRM: 1 [1 - 1 - 1].

Total Specimens for 27 November 1843: 1

3 April 1854

Ethiopia: Bellegaz valley: Von Heuglin, Theodor: NMW: 1 [1 - 1 - 1].

Total Specimens for 3 April 1854: 1

1 January 1855

Sudan: Bellegas: Von Heuglin, Theodor: SMNS: 1 [1 - 1 - 1].

Total Specimens for 1 January 1855: 1

8 August 1859

Namibia: Olifant's Vlei [= Elephant Vlei / Vley]: Andersson, C.J.: BMNH: 1 [1 - 1 - 1].

Total Specimens for 8 August 1859: 1

10 August 1859

Namibia: Olifant's Vlei [= Elephant Vlei / Vley]: Andersson, C.J.: BMNH: 1 [1 - 1 - 1].

Total Specimens for 10 August 1859: 1

1 October 1863

Sudan: Bongo: Von Heuglin, Theodor: SMNS: 1 [1 - 1 - 1].

Total Specimens for 1 October 1863: 1

1 January 1871

South Africa: Natal: Schlüter, Wm.: SMNS: 1 [1 - 1 - 1].

Total Specimens for 1 January 1871: 1

10 December 1872

Egypt: Cairo: Roosevelt, T.: USNM: 1 [1 - 1 - 1].

Total Specimens for 10 December 1872: 1

24 June 1881

Tanzania: Zanzibar: de Ville: KBIN: 1 [1 - 1 - 1].

Total Specimens for 24 June 1881: 1

9 December 1882

Tanzania: Zanzibar: de Ville: KBIN: 1 [1 - 1 - 1].

Total Specimens for 9 December 1882: 1

1 January 1884

Congo (Democratic Republic of the): Semmio: Bohndorff: RMNH: 1 [1 - 1 - 1].

Total Specimens for 1 January 1884: 1

22 July 1884

Liberia: Schieffelinville: Stampfli, F.X.: RMNH: 1 [1 - 1 - 1].

Total Specimens for 22 July 1884: 1

30 November 1884

Ethiopia: Let Marefia: Antinori: MNHN: 1 [1 - 1 - 1].

Total Specimens for 30 November 1884: 1

21 January 1885

Gabon: Ssibange [Sibange] farm: Soyaux, H.: ZMB: 1 [1 - 1 - 1].

Total Specimens for 21 January 1885: 1

11 July 1885

Liberia: Schieffelinville: Stampfli, F.X.: RMNH: 1 [1 - 1 - 1].

Total Specimens for 11 July 1885: 1

3 April 1887

Tanzania

: 19 1/17: TM: 1 [1 - 1] - 19 2/20: ? : Collector Unknown: TM: 3 [3 - 3 - 4].
"Mosambiro", but actually Usambiro: 18 9/09: ? : Collector Unknown: BMNH: 1 [1 - 1 - 1].
Amani: Collection Date Unknown: ? : Collector Unknown: TM: 2, ZMB: 3 [5]; Awernizew: ZMB: 1 [1]; Hubbard, C.H.: TM: 1 [1]; Scheffler: ZMB: 1 [1]; Vossler: ZMB: 8 [8 - 16] - 19 4/04: Hubbard, C.A.: TM: 1 [1 - 1] - 19 4/04: Taylor, R.H.: TM: 1 [1 - 1] - 19 4/30: ? : Collector Unknown: TM: 1 [1 - 1] - 19 5/01: Hubbard, C.A.: TM: 1 [1 - 1] - 19 7/16: ? : Collector Unknown: TM: 2 [2 - 2] - 19 9/01: McInnery: BMNH: 1 [1 - 1 - 23].
Amani Nature Forest Reserve, NW-side: 20 2/09: Frontier: SMF: 2 [2 - 2] - 20 2/10: Frontier: SMF: 1 [1 - 1 - 3].
Amani West Forest Reserve: Collection Date Unknown: Howell, K.M. and Stuart, S.N.: BMNH: 1 [1 - 1 - 1].
Amani, 4.5 km WNW: 19 8/04: Goodman, Steven M.: FMNH: 1 [1 - 1 - 1].
Amani, 8 km WNW: 19 8/10: Goodman, Steven M.: FMNH: 2 [2 - 2 - 2].
Ambangulu Estate: 19 2/20: Howell, K.M.: SMF: 1 [1 - 1 - 1].
Ambangulu Estates: Collection Date Unknown: ? : Collector Unknown: ZMB: 3 [3]; Martienssen: ZMB: 8 [8 - 11 - 11].
Ambani caves: Collection Date Unknown: Taylor, R.H.: TM: 3 [3 - 3 - 3].
Arusha: 19 7/26: Kulzer, Edwin: SMF: 2 [2 - 2 - 2].

- Arusha, 6 mi S:** 19 7/24: Hoogstraal, Harry H.: FMNH: 3 [3 - 3 - 3].
- Arusha, 8 mi S:** 19 7/24: Hoogstraal, Harry H.: FMNH: 1 [1 - 1 - 1].
- Bagamoyo:** Collection Date Unknown: ?; Collector Unknown: ZMB: 2, ZMH: 1 [3]; Fischer: ZMB: 12 [12]; Langheld: ZMB: 4 [4]; Van Barneveld, H.W.P.: RMNH: 21 [21 - 40] - 19 1/30: ?; Collector Unknown: RMNH: 8 [8 - 8] - 19 1/30: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/01: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/02: ?; Collector Unknown: RMNH: 2 [2 - 2] - 19 2/02: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/02: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/03: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/04: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/04: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/05: ?; Collector Unknown: RMNH: 3 [3 - 3] - 19 2/06: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/06: ?; Collector Unknown: RMNH: 8 [8]; Van Barneveld, H.W.P.: RMNH: 1 [1 - 9] - 19 2/07: ?; Collector Unknown: RMNH: 3 [3 - 3] - 19 2/08: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/09: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/09: ?; Collector Unknown: RMNH: 2 [2 - 2] - 19 2/11: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/12: ?; Collector Unknown: RMNH: 1 [1 - 1] - 19 2/29: Brooks, A.C.: BMNH: 2 [2 - 2] - 19 4/10: Van Barneveld, H.W.P.: RMNH: 1 [1 - 1] - 19 6/01: Van Barneveld, H.W.P.: RMNH: 2 [2 - 2 - 84].
- Bamba-Mlungi Forest Reserve:** Collection Date Unknown: Bayliss, J. et al. (Frontier-Project): SMF: 1 [1 - 1] - 19 9/02: Bayliss, J.: SMF: 1 [1 - 1 - 2].
- Banagi:** 19 1/16: Plisnier, J.: KBIN: 1 [1 - 1] - 19 1/30: Brooks, A.C.: BMNH: 1 [1 - 1] - 19 1/31: Brooks, A.C.: BMNH: 1 [1]; Swynnerton, G.H.: BMNH: 1 [1 - 2] - 19 2/11: Brooks, A.C.: BMNH: 1 [1 - 1] - 19 2/18: Plisnier, J.: KBIN: 5 [5 - 5] - 19 2/24: Plisnier, J.: KBIN: 3 [3 - 3] - 19 3/02: Brooks, A.C.: BMNH: 1 [1 - 1] - 19 3/05: Brooks, A.C.: BMNH: 1 [1 - 1] - 19 3/21: Brooks, A.C.: BMNH: 1 [1 - 1] - 19 9/13: Swynnerton, G.H.: BMNH: 2 [2 - 2 - 18].
- Behobeho:** 19 6/01: Msuya, C.A.: SMF: 1 [1 - 1 - 1].
- Bet El Ras:** Collection Date Unknown: Pakenham, R.H.W.: BMNH: 6 [6 - 6 - 6].
- Bismarckburg [=Kasanga]:** Collection Date Unknown: Fromm: ZMB: 1 [1 - 1 - 1].
- Bologonja:** 19 9/04: Plisnier, J.: KBIN: 1 [1 - 1 - 1].
- Bugagi:** Collection Date Unknown: Pakenham, R.H.W.: BMNH: 1 [1 - 1 - 1].
- Bukoba:** Collection Date Unknown: Carl, J.: MHNG: 6 [6]; Eggert: ZMB: 1 [1]; Emir Pascha: ZMB: 4 [4]; Mecklenburg, Adolf Fritz zu (Herzog): ZMB: 7 [7 - 18 - 18].
- Bungi:** Collection Date Unknown: Pakenham, R.H.W.: BMNH: 2 [2 - 2 - 2].
- Capri Point:** 19 1/15: Luttkik, R.: ZMA: 3 [3 - 3 - 3].
- Chimala:** 19 0/22: Knipper: SMNS: 4 [4 - 4] - 19 6/04: Knipper: LNK: 11 [11 - 11 - 15].
- Chita, 3 km N:** 19 8/03: Stanley, William (Bill) T.: FMNH: 3 [3 - 3 - 3].
- Chuaka:** Collection Date Unknown: Swinny, H.H.: BMNH: 1 [1 - 1 - 1].
- Dali:** 19 7/11: Andersen, Th.: ZFMK: 1 [1 - 1] - 19 7/12: Andersen, Th.: ZFMK: 1 [1 - 1 - 2].
- Dar es Salaam:** 19 0/22: Dinkelacker: SMNS: 1 [1 - 1] - Collection Date Unknown: ?; Collector Unknown: BMNH: 1 [1]; Loveridge, Arthur: BMNH: 3 [3]; Swaythling: BMNH: 1 [1 - 5] - 19 1/20: Loveridge, Arthur: BMNH: 2 [2 - 2] - 18 2/08: Rautenberg: ZMH: 1 [1 - 1] - 19 6/06: Pommeroy: RMCA: 2 [2 - 2] - 19 6/25: Howell, K.M. and Otindo, B.L.: BMNH: 1 [1 - 1] - 19 7/25: Andersen: ZFMK: 3 [3 - 3] - 19 8/06: Mduma: SMF: 1 [1 - 1] - 19 8/14: Zimmer, J.T.: FMNH: 2 [2 - 2 - 18].
- Dar-es-Salaam:** Collection Date Unknown: ?; Collector Unknown: ZMB: 5 [5]; Biedermann, Mr.: ZMB: 2 [2]; Hürstel: MZStrasbourg: 1 [1]; Stuhlmann, Franz (dr.): ZMB: 8 [8]; Werth: ZMB: 4 [4]; Willems: ZMB: 1 [1]; Worth: ZMB: 1 [1 - 22] - 19 2/08: ?; Collector Unknown: TM: 1 [1 - 1 - 23].
- Engaruka:** Collection Date Unknown: Swynnerton, G.H.: SMF: 1 [1 - 1 - 1].
- Genda Genda South forest reserve:** 19 0/18: Cockle, A.: SMF: 1 [1 - 1] - Collection Date Unknown: Cockle, A.: SMF: 1 [1 - 1] - 19 1/28: Cockle, A.: SMF: 1 [1 - 1] - 19 8/14: Hart, A.: SMF: 1 [1 - 1 - 4].
- Gibbs farm:** 19 9/01: Howell, K.M.: SMF: 1 [1 - 1 - 1].
- Gombe Stream National Park:** 19 2/12: Howell, K.M. and Wrangham, R.W.: BMNH: 1 [1 - 1 - 1].
- Grummetti:** 19 0/03: Ingles, Jane M.: BMNH: 1 [1 - 1] - 19 8/23: Plisnier, J.: KBIN: 1 [1 - 1 - 2].
- Gulwe Station:** 19 1/07: Loveridge, Arthur: BMNH: 1 [1 - 1 - 1].
- Handajega:** 19 0/28: Plisnier, J.: KBIN: 2 [2 - 2 - 2].
- Igalula:** 19 5/07: Rees, A.F.?: HZM: 1 [1 - 1 - 1].
- Ikungi:** 19 0/03: Loveridge, Arthur: BMNH: 1 [1 - 1 - 1].
- Ilonga Research and Training Centre:** 19 3/02: Lambert, R.R.K.: BMNH: 1 [1 - 1 - 1].
- Inwale:** Collection Date Unknown: Ionides, C.J.P.: BMNH: 1 [1 - 1 - 1].
- Iraqu:** 19 7/25: Kohl-Larsen expedition, the: SMF: 5 [5 - 5 - 5].
- Iringa:** Collection Date Unknown: Jörgens: ZMB: 3 [3 - 3 - 3].
- Iringa, near:** 19 7/23: Knipper: LNK: 1 [1 - 1 - 1].
- Itende:** 19 1/14: Loveridge, Arthur: BMNH: 1 [1 - 1 - 1].
- Kafukola:** 19 0/22: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 2/10: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 4/16: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 4/25: Vesey-FitzGerald, L.D.E.F. (Col.): HZM: 1 [1 - 1] - 19 6/06: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 7/06: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 7/13: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 8/05: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 8/15: Robertson, I.A.D.: HZM: 1 [1 - 1] - 19 8/16: Robertson, I.A.D.: BMNH: 1 [1 - 1] - 19 9/03: Robertson, I.A.D.: HZM: 1 [1 - 1 - 11].
- Kafukola C. Rukwa:** 19 7/17: ?; Collector Unknown: TM: 1 [1 - 1] - 19 8/13: ?; Collector Unknown: TM: 1 [1 - 1] - 19 8/20: ?; Collector Unknown: TM: 1 [1 - 1] - 19 8/23: ?; Collector Unknown: TM: 1 [1 - 1 - 4].
- Kalambo Falls:** 19 6/15: Holliday, C.S.: NHMZ: 1 [1 - 1 - 1].
- Kalembo:** 19 4/10: Robertson, I.A.D.: HZM: 1 [1 - 1 - 1].
- Kambai Forest Reserve:** Collection Date Unknown: Frontier-Project: SMF: 1 [1 - 1 - 1].
- Kampi Ya Mawe:** 19 2/02: Swynnerton, G.H.: BMNH: 4 [4 - 4 - 4].
- Karema:** Collection Date Unknown: Fromm: ZMB: 1 [1 - 1 - 1].
- Karugu:** 19 2/16: Swynnerton, G.H.: BMNH: 4 [4 - 4 - 4].
- Kawe:** 19 1/06: Williams, John G.: ROM: 1 [1 - 1 - 1].
- Kazimzumbwi forest reserve:** 19 1/18: Cockle, A.: SMF: 1 [1 - 1] - 19 1/20: Cockle, A.: SMF: 1 [1 - 1] - 19 3/11: Cockle, A.: SMF: 1 [1 - 1 - 3].
- Kebandio island:** Collection Date Unknown: ?; Collector Unknown: ZMB: 1 [1 - 1 - 1].
- Kibebe farms:** 20 8/09: Stanley, William (Bill) T.: FMNH: 1 [1 - 1 - 1].
- Kichanjane:** 19 2/07: Rees, A.F.?: HZM: 1 [1 - 1 - 1].
- Kidugallo:** Collection Date Unknown: Anderson, Th.: SMF: 1 [1 - 1] - 19 2/07: Andersen, Th.: SMNS: 1 [1 - 1] - 19 2/08:

- Andersen, Th.: ZFMK: 1 [1 - 1] - 19 2/23: Andersen, Th.: SMNS: 1 [1 - 1] - 19 2/28: Andersen: ZFMK: 1 [1 - 1] - 19 8/19: Von Nagy: ZFMK: 1 [1 - 1 - 6].
- Kigoma:** 19 2/04: Easton, E.R.: BMNH: 1 [1 - 1 - 1].
- Kilombero Valley:** Collection Date Unknown: Frontier: SMF: 1 [1 - 1] - 19 7/22: Frontier: SMF: 1 [1 - 1 - 2].
- Kilondoni:** 19 9/23: Swynnerton, G.H.: BMNH: 1 [1 - 1] - 19 9/25: Swynnerton, G.H.: BMNH: 3 [3 - 3 - 4].
- Kilosa:** Collection Date Unknown: Loveridge, Arthur: BMNH: 1 [1 - 1] - 19 1/17: Rees, A.F.?: HZM: 1 [1 - 1] - 19 1/24: Rees, A.F.?: ZFMK: 1 [1 - 1] - 19 2/19: Rees, A.F.?: HZM: 1 [1 - 1] - 19 5/02: ?: Collector Unknown: SMF: 1 [1 - 1] - 19 5/04: Loveridge, Arthur: BMNH: 1, USNM: 1 [2 - 2] - 19 5/08: Loveridge, Arthur: BMNH: 1 [1 - 1] - 19 5/10: Loveridge, Arthur: KM: 2 [2 - 2] - 19 5/10: Loveridge, Arthur: BMNH: 3 [3 - 3 - 13].
- Kilossa, weitere Umgebuhg [=near Kilosa]:** Collection Date Unknown: Fachlehrer, A. Horn: NMW: 1 [1 - 1 - 1].
- Kilulu Hill:** 19 2/25: Cockle, A.: SMF: 1 [1 - 1 - 1].
- Kinole:** Collection Date Unknown: Schlüter, A.: ZMB: 1 [1 - 1 - 1].
- Kiraboga:** 19 8/11: Harrison, David Lakin (Dr.): SMF: 1 [1 - 1 - 1].
- Kisaki:** Collection Date Unknown: Buchanan, Angus: BMNH: 1 [1 - 1 - 1].
- Kisarawe:** Collection Date Unknown: ?: Collector Unknown: ZFMK: 1 [1 - 1] - 19 1/10: Howell, K.M.: BMNH: 1 [1 - 1] - 19 2/02: Howell, K.M.: BMNH: 1 [1 - 1] - 19 2/22: Howell, K.M. and Msuya, C.A.: USNM: 2 [2 - 2] - 19 3/09: Howell, K.M.: USNM: 1 [1 - 1] - 19 7/21: Andersen, Th.: ZFMK: 2 [2 - 2] - 19 8/18: Andersen, Th.: ZFMK: 1 [1 - 1] - 19 9/06: Andersen, Th.: ZFMK: 1 [1 - 1] - 19 9/08: Cozens, G.P. and Swinny, H.H.: BMNH: 1 [1 - 1 - 11].

Total Specimens for Zimbabwe: 1458

Grand total: 24891

Appendix 5: Keys from the Literature

Previously published keys for African Chiroptera. The keys are presented in chronological order, and within the same year alphabetically per author.

The keys do not include drawings or figures included in the original publications. If the identification in the published key was not equal to that used in the African Chiroptera Report, the current name is also mentioned in **BLUE**. Some notes in **GREEN** refer to identifications found in error by other publications. The most recent published name for this taxon is given in **ORANGE**. If the identification has been modified, this modified name has been used to link it with the name used in the African Chiroptera Report. The ability of the published keys to allow accurate identifications has not been checked.

Appendix 5a: Lataste (1885). Etude de la faune des Vertébrés de Barbarie (Algérie, Tunisie et Maroc)

- | | | |
|----|---|--|
| 1 | a | Queue épaisse, dépassant considérablement la membrane interfémorale et coupant son bord libre à angle droit. Première phalange du doigt médian, au repos, repliée en dessus du métacarpien (Famille Emballonuridés)..... 29 |
| | b | Queue grêle, dépassant au plus de deux vertèbres la membrane interfémorale et coupant son bord libre à angle aigu. Première phalange du doigt médian, au repos, repliée en dessous du métacarpien. 2 |
| 2 | a | Des appendices membraneux sur le nez (un fer à cheval horizontal et une feuille nasale verticale). Pas d'oreillon (tragus) dans l'intérieur de l'oreille (Famille Rhinolophidés)..... 3 |
| | b | Pas d'appendices membraneux sur le nez. Un oreillon distinct de l'oreille (Famille Vespertilionidés). 8 |
| 3 | a | Le premier orteil à deux, les quatre autres à trois phalanges. Feuille nasale développée surtout dans le sens antéro-postérieur (Genre <i>Rhinolophus</i>)..... 4 |
| | b | Tous les orteils à deux phalanges. Feuille nasale développée surtout dans le sens transversal (Genre <i>Phyllorhina</i>). <i>Phyllorhina tridens</i>
African Chiroptera name <i>Asellia tridens</i> |
| 4 | a | Canine et deuxième prémolaire supérieures contiguës, la première prémolaire minuscule et rejetée en dehors de l'alignement dentaire (1)..... 5 |
| | b | Première prémolaire petite, mais en alignement entre la canine et la deuxième prémolaire qu'elle sépare 6 |
| 5 | a | Longueur de l'avant-bras, 54 à 57 mill. Oreilles effilées à la pointe..... <i>Rhinolophus ferrum-equinum</i>
African Chiroptera name <i>Rhinolophus ferrumequinum</i> |
| | b | Avant-bras, environ 44 mill. Oreilles pointues, mais non effilées. <i>Rhinolophus clivosus</i> |
| 6 | a | Longueur avant-bras, 35 à 38 mill..... <i>Rhinolophus hipposideros</i> |
| | b | Longueur avant-bras, de 46 à 50 mill..... 7 |
| 7 | a | Bord libre de la membrane alaire s'insérant au talon. Côtés de la sella (face antérieure de la feuille nasale) convergents..... <i>Rhinolophus Blasii</i> |
| | b | Bord libre de la membrane alaire s'insérant au tibia, au-dessus du talon. Côtés de la sella parallèles ou très légèrement concaves..... <i>Rhinolophus euryale</i> |
| 8 | a | Front très convexe et brusquement élevé au-dessus du museau. Un intervalle entre les incisives et les canines supérieures (groupe C Miniopteri) (Genre <i>Miniopterus</i>).
..... <i>Miniopterus Schreibersi</i>
African Chiroptera name <i>Miniopterus schreibersi</i> |
| | b | Front presque sur le même plan que le museau. Incisives supérieures contiguës aux canines. 9 |
| 9 | a | Oreilles soudées l'une à l'autre près de leurs bases (groupe A Plecoti)..... 10 |
| | b | Oreilles libres (groupe B Vespertiliones). 12 |
| 10 | a | Une seule incisive de chaque côté à la mâchoire supérieure. Tout au plus une fente prolongeant légèrement en arrière l'orifice nasal. Robe très pâle (Genre <i>Otonycteris</i>).
..... <i>Otonycteris Hemprichi</i>
African Chiroptera name <i>Otonycteris hemprichii</i> |
| | b | Deux incisives de chaque côté à la mâchoire supérieure. Museau profondément excavé derrière les narines. Robe plus ou moins brune..... 11 |
| 11 | a | Trois prémolaires de chaque côté à la mâchoire inférieure. Les excavations post- |

- nasales isolées l'une de l'autre. Oreille très grande, presque de la longueur du corps, non dentelée, son bord externe naissant auprès et en arrière de l'angle de la bouche (Genre *Plecotus*)..... *Plecotus auritus*
African Chiroptera name *Otonycteris hemprichii*
- b Deux prémolaires de chaque côté et la mâchoire inférieure. Les excavations post-nasales confluentes. Oreille courte, large, dentelée, son bord externe naissant en avant et au-dessus de l'angle de la bouche (Genre *Synotus*). ... *Synotus barbastellus*
African Chiroptera name *Barbastella barbastellus*
- 12 a Une ou deux prémolaires seulement de chaque côté à la mâchoire supérieure, deux à l'inférieure. Oreillon peu allongé, obtus et plus ou moins recourbé en dedans (Genre *Vesperugo*). 13
b Trois prémolaires de chaque côté et à chaque mâchoire (38 dents). Oreillon (sauf pour *dasychneme*) long, aigu et droit ou recourbé en dehors (Genre *Vespertilio*)... 22
- 13 a Seulement une prémolaire supérieure, en tout 32 dents (Sous-genre *Vesperus*).. 14
b Deux prémolaires supérieures, en tout 34 dents (Sous-genre *Vesperugo*). 17
- 14 a Avant-bras, de 38 à 45 mill. 15
b Avant-bras, plus de 45 et jusqu'à 55 mill. 16
- 15 a Oreillon atténué au sommet, atteignant sa plus grande largeur vers le milieu de son bord interne..... *Vesperugo (Vesperus) borealis*
b Oreillon dilaté par le haut, atteignant sa plus grande largeur au-dessus du milieu de son bord interne. *Vesperugo (Vesperus) discolor*
- 16 a Plus grande largeur de l'oreillon, environ moitié moindre que la hauteur de son bord interne. Couleur, brunnoirâtre, un peu plus pâle en dessous. *Vesperugo (Vesperus) serotinus*
African Chiroptera name *Eptesicus serotinus*
b Plus grande largeur de l'oreillon, presque égale à la hauteur de son bord interne. Couleur, isabelle, très pâle en dessous. *Vesperugo (Vesperus) isabellinus*
African Chiroptera name *Eptesicus serotinus*
- 17 a Longueur avant-bras, plus de 38, jusqu'à 65 mill. et plus. Oreillon nettement élargi au sommet, sècuriforme. Membrane alaire s'insérant au talon. 18
b Longueur avant-bras, 30 à 36 mill. Oreillon non dilaté par en haut. Membrane alaire s'insérant aux orteils. 19
- 18 a Longueur avant-bras, de 50 à 65 mill. et plus. *Vesperugo (Vesperugo) noctula*
African Chiroptera name *Nyctalus noctula*
b Longueur avant-bras, de 38 à 42 mill. *Vesperugo (Vesperugo) Leisleri*
African Chiroptera name *Nyctalus leisleri*
- 19 a Oreillon atteignant sa plus grande largeur vers le milieu de son bord interne. *Vesperugo (Vesperugo) Savii*
African Chiroptera name *Hypsugo savii*
b Oreillon atteignant sa plus grande largeur immédiatement au-dessus de l'origine de son bord interne. 20
- 20 a Incisive supérieure interne simple; l'externe très petite. *Vesperugo (Vesperugo) Kühli*
African Chiroptera name *Pipistrellus kuhlii*
b Incisive supérieure interne bilobée; l'externe très apparente. son sommet s'écartant peu du niveau du lobe externe de l'interne..... 21
- 21 a Bord externe de l'oreille à peu près rectiligne dans son tiers supérieur. Pénis de longueur moyenne (environ 1/2 centim.). Longueur avant - bras, 30 à 33 mill. *Vesperugo (Vesperugo) pipistrellus*
African Chiroptera name *Pipistrellus pipistrellus*
b Bord externe de l'oreille légèrement excavé en haut. Pénis très long (13 mill. environ). Longueur avant-bras, 35 à 36 mill. *Vesperugo (Vesperugo) abramus*
- 22 a Calcanéum très long, occupant environ les trois quarts de la distance du tarse à l'angle postérieur de la membrane interfémorale; cet angle très aigu. Membrane alaire insérée au talon ou au métatarse. 23
b Calcanéum n'occupant guère que la moitié de ladite distance et membrane interfémorale terminée en arrière par un angle obtus. Membrane alaire insérée à la base des orteils..... 25
- 23 a Aile insérée au métatarse. Avant-bras, environ 38 mill. *Vespertilio Daubentoni*
b Aile insérée au talon. Avant-bras, plus de 40 mill. 24
- 24 a Oreillon à pointe très aiguë et recourbée en dehors. Avant-bras, environ 41 mill.

- *Vespertilio Capaccinii*
 African Chiroptera name *Myotis capaccinii*
- 25 b Oreillon obtus et recourbé en dedans. Avant-bras, 43 à 46 mill. *Vespertilio dasycneme*
 a Avant-bras, environ 60 mill. *Vespertilio murinus*
 b Avant-bras, au plus 43 mill. environ. 26
- 26 a Oreillon assez aigu, droit. Avant-bras, 32 à 34 mill. *Vespertilio mystacinus*
 b Oreillon très aigu et plus ou moins recourbé en arrière. Avant-bras, 38 mill. au moins.
 27
- 27 a Hauteur de l'oreillon, environ les trois quarts de celle de l'oreille. Bord libre de la
 membrane interfémorale cilié de poils raides. *Vespertilio Nattereri*
 African Chiroptera name *Myotis nattereri*
 b Hauteur de l'oreillon, au plus la moitié de celle de l'oreille. Bord libre de la membrane
 interfémorale nu ou ne présentant que des poils ordinaires. 28
- 28 a Oreille profondément échancrée sur son bord externe et sensiblement plus courte que
 la tête. *Vespertilio emarginatus*
 African Chiroptera name *Myotis emarginatus*
 b Oreille non échancrée et beaucoup plus longue que la tête. *Vespertilio Bechsteini*
- 29 a Narines valvulées, en fentes transversales; derrière elles, une feuille nasale
 rudimentaire. Deux phalanges à l'index (Genus *Rhinopoma*). *Rhinopoma*
microphyllum
 b Narines simples; pas de feuille nasale. Une seule phalange à l'index (Genre
Nyctinomus). *Nyctinomus Cestonii*
 African Chiroptera name *Tadarida ventralis*

Appendix 5b: Monard (1935). Contribution à la mammalogie d'Angola et prodrome d'une faune d'Angola.

- 1 a Couronnes des molaires aplaties, sans tubercules nets. Premier et second doigts terminés par des griffes. Queue nulle ou rudimentaire. Frugivores, dd grande taille. (Megachiroptères, Pteropodidae)..... 15
- b Couronnes des molaires hérissées de cônes aigus, normalement 4 ou 5. Deuxième doigt non terminé par une griffe. Queue développée, comprise au moins en partie dans la membrane. Insectivores de petite taille. (Microchiroptères)..... 2
- 2 a Nez surmonté d'un feuillet nasal compliqué, muni d'un lobe aigu à sa partie supérieure. Orteils II à V il trois phalanges (Famille Rhinolophidae). *Rhinolophus aethiops*
African Chiroptera name *Rhinolophus fumigatus*
- b Nez surmonté d'un feuillet nasal tronqué à sa partie supérieure. Orteils II à V à deux phalanges (Famille Hipposideridae)..... *Hipposideros angolensis*
- c Nez compliqué d'un profond sillon médian longitudinal. Oreilles très grandes (Famille Nycteridae). *Nycteris capensis*
African Chiroptera name *Nycteris thebaica*
- d Nez simple, sans ornement et sans fente longitudinale. 3
- 3 a Queue perforant la membrane et saillant à sa surface supérieure (Famille Emballonuridae)..... *Taphozous mauritanus*
- b Queue dépassant longuement la membrane (Famille Molossidae). (genres *Nyctinomus* et *Chaerephon*) 21
- c Queue comprise entièrement dans la membrane, ou la dépassant seulement d'une partie de dernière vertèbre (Famille Vespertilionidae)..... 4
- 4 a Vertex très bombé élevé au-dessus du rostre. Incisives supérieures séparées des canines. Deuxième phalange du doigt III environ trois fois plus longue que la première..... *Miniopterus schreibersii*
- b Vertex plat ou peu bombé. Deuxième phalange du doigt III non extraordinairement allongée. 5
- 5 a Trois prémolaires supérieures et 3 molaires. 6
- b Deux prémolaires supérieures et 3 molaires. 8
- c Une prémolaire supérieure et 3 molaires. 9
- 6 a Ouvertures nasales circulaires. Les trois prémolaires presque égales. *Kerivoula brunnea* / *Kerivoula lanosa*
- b Ouvertures nasales en croissant. Troisième prémolaire plus grande que les deux premières..... 7
- 7 a Des glandes sur le côté externe de l'avant-bras..... *Cistugo seabrae*
- b Pas de glandes particulières sur les ailes. *Myotis bocagei* / *Myotis welwitschi*
- 8 a Incisive supérieure externe très petite, sa pointe ne dépassant pas le cingulum de l'interne, et située extérieurement à la ligne incisive intercanine. . *Scotozous trüppellii*
African Chiroptera name *Pipistrellus rueppellii*
- b Incisive supérieure externe plus petite que l'interne mais dépassant le cingulum. *Pipistrellus rüppellii* / *Pipistrellus nanus* / *Pipistrellus kühli* / *Pipistrellus anchietae* / *Pipistre*
- 9 a Deux paires d'incisives supérieures. 10
- b Une paire d'incisives supérieures..... 14
- 10 a Lèvre inférieure munie de lobes commissuraux. Hauteur du crâne, avec bulles, égalant environ la distance qui sépare les incisives de la racine postérieure du zygomatique. *Glauconycteris congicus*
African Chiroptera name *Glauconycteris argentata*
- b Lèvre inférieure sans lobes commissuraux. Hauteur du crâne plus petite que cette distance 11
- 11 a Crâne remarquablement large et plat, avec région lacrymale renflée. Ailes remarquablement courtes et réduites..... *Mimetillus bernerii*
African Chiroptera name *Mimetillus thomasi*
- b Crane normal. Ailes développées. 12
- 12 a Rostre convexe latéralement. Nasaux ne s'étendant pas jusqu'à mi-chemin de la constriction interorbitaire. Emargination palatale plus profonde que large. 13
- b Rostre concave latéralement. Nasaux s'étendant jusqu'à mi-chemin de la constriction

- interorbitaire. Emargination palatale plus large que profonde. *Vespertilio murinus*
- 13 a Oreilles normales *Eptesicus minutus* / *Eptesicus capensis*
 b Oreilles grandes *Laephotis angolensis*
- 14 a Première et seconde molaires supérieures avec mésostyle (petit tubercule se trouvant sur le côté externe de la dent, en son milieu) réduit, le W formé par les cônes principaux tordu ou peu net *Pachyotus borbonicus*
 African Chiroptera name *Scotophilus borbonicus*
 b Mésostyle présent. W non déformé *Scotoecus albigula*
- 15 a 5 molaires supérieures 16
 b 4 molaires supérieures *Plerotes anchietae*
 c 3 molaires supérieures 19
- 16 a Un court meat auditif osseux *Eidolon helvum*
 b Non 17
- 17 a Longueur du rostre (du bord antérieur de l'orbite à l'extrémité de nasaux) plus grande que la largeur lacrymale (genre *Rousettus*) 18
 b Longueur du rostre égalant sa largeur. *Myonycteris torquata*
 African Chiroptera name *Myonycteris (Myonycteris) torquata*
- 18 a Avant-bras 89 – 99 mm. 4, 3, 1 plis palataux. Brun foncé et gris. .. *Rousettus leachi*
 African Chiroptera name *Rousettus aegyptiacus*
 b Avant-bras 88 – 99 mm. 4, 4, 1 plis palataux. Brun et gris. ... *Rousettus aegyptiacus*
 c Avant-bras 78 – 83 mm. 3, 4, 2 plis palataux. Brun châtain et brun foncé. *Rousettus angolensis*
 African Chiroptera name *Lissonycteris angolensis*
- 19 a Rostre plus long que la largeur lacrymale. 20
 b Rostre environ égal à cette largeur. *Micropteropus pusillus*
- 20 a Partie postérieure du palais concave. *Epomophorus zenkeri*
 African Chiroptera name *Kerivoula lanosa*
 b Partie postérieure du palais plane *Epomophorus (Epomops) comptus*
 African Chiroptera name *Epomops franqueti*
- 21 a Deux prémolaires supérieures et inférieures. Oreilles épaisses, opaques, jointes par un large bandeau. Lèvres sillonnées verticalement. (Genre *Chaerephon*) 22
 b genre *Nyctinomus* *Nyctinomus bocagei*
 African Chiroptera name *Tadarida aegyptiaca bocagei*
- 22 a Première prémolaire supérieure située dans la ligne dentaire 23
 b Première prémolaire supérieure située extérieurement à la ligne dentaire. Avant-bras 46 mm *Chaerephon angolensis*
- 23 a Région inférieure de la poitrine et ventre blancs. Avant-bras 38 mm. *Chaerephon limbatus*
 African Chiroptera name *Chaerephon pumilus*
 b Poitrine et ventre roussâtres. 24
- 24 a Avant-bras 38 mm *Chaerephon pumilus*
 b Avant-bras 47 – 50 mm *Chaerephon spillmanni*
 African Chiroptera name *Chaerephon nigeriae spillmanni*

Appendix 5c: Malbrant and Maclatchy (1949). Faune de l'équateur Africain français.

- 1 a Couronne des molaires aplatie et lisse sans tubercules marqués. Pouce et second doigt des membres antérieurs terminés par des griffes. Taille variable, souvent grande ou très grande, mais parfois très petite. Queue absente ou rudimentaire. (Sous-ordre des Megachiroptères; Chauves-souris frugivores: Pteropidae). 7
- b Couronne des molaires pourvue de tubercules aigus. Deuxième doigt des membres antérieurs non terminé par une grille. Queue en général bien développée, incluse au moins en partie dans la membrane interfémorale. Taille faible. (Sous-ordre des Microchiroptères, Chauves-souris insectivores)..... 2
- 2 a Queue à l'extrémité libre, dépassant sensiblement la membrane interfémorale..... 3
- b Queue entièrement incluse dans la membrane interfémorale ou ne la dépassant que d'une partie de la dernière vertèbre caudale. 4
- 3 a Un tragus auriculaire petit et arrondi mais bien visible. Pas de feuilles nasales. Museau légèrement allongé. Membres postérieurs grêles. Queue grêle perforant la membrane interfémorale et saillant sur sa face supérieure. Oreilles largement séparées (Famille Emballonuridae)..... 18
- b Tragus auriculaire petit, parfois même rudimentaire. Pas de feuilles nasales. Museau tronqué obliquement. Membres postérieurs trapus. Queue épaisse à la base débordant la membrane interfémorale, qui est étroite, d'au moins un tiers de sa longueur. Oreilles très rapprochées et souvent même reliées entre elles par une bande cutanée sur le front, à bords postérieurs bien descendus sur la joue (Famille Molossidae). 48
- 4 a Pas de feuilles nasales. Un tragus auriculaire grêle et droit. Oreilles en général petites et largement séparées (Famille Vespertilionidae)..... 31
- b Feuilles nasales plus ou moins développées, mais toujours présentes..... 5
- 5 a Queue beaucoup plus courte que la membrane interfémorale dont elle ne dépasse pas le bord d'insertion. Oreilles très grandes soudées à leur base avec tragus allongé en pointe et bifurqué. Membranes. oreilles et tragus de couleur orangé brun (Famille Megadermidae). *Lavia frons*
- b Queue dépassant le bord d'insertion de la membrane interfémorale. Oreilles plus petites, non soudées à la base; tragus arrondi ou absent. 6
- 6 a Feuilles nasales présentes; nez compliqué d'un profond sillon médian longitudinal. Oreilles grandes: tragus de grandeur variable mais généralement petit. Queue atteignant l'extrémité de la membrane interfémorale, formant un Y renversé à sa jonction avec celle-ci (Famille Nycteridae). 19
- b Feuilles nasales compliquées, affectant en général la forme d'un fer à cheval. Pas de sillon nasal. Queue se terminant en pointe dans la membrane interfémorale (Famille Rhinolophidae). 25
- 7 a Langue très extensible fixée au plancher de la bouche par son tiers postérieur, sa partie terminale étant couverte en dessus de papilles filiformes. Cinquième métacarpien beaucoup plus court que le troisième. Très petite taille. Longueur de l'avant-bras ne dépassant pas 45 mm. Molaires 5/5. *Megaloglossus Woermanni*
- b Langue simple fixée au plancher de la bouche par sa moitié postérieure et sans papilles filiformes à l'extrémité. Taille plus grande. Longueur de l'avant-bras dépassant toujours 45 mm..... 8
- 8 a Molaires 4-6. Palais plat. Quatre sillons palataux. Deux taches blanches à la base des oreilles..... *Plerotes Anchietae*
- b Molaires 5-6. Tête sans taches ni touffes blanches..... 9
- c Molaires 3-5. Tête du mâle parfois pourvue de taches ou de touffes blanches. 12
- 9 a Axe des deux rangées de molaires supérieures passant à travers ou au-dessous du condyle occipital. Petite taille: longueur de l'avant-bras variant de 55 à 60 mm. Pelage brun, plus clair dessous, à l'exception de la collerette, qui est jaune roussâtre. *Myonycteris torquata*
African Chiroptera name *Myonycteris (Myonycteris) torquata*
- b Axe de chaque rangée de molaires supérieures passant au-dessus du condyle occipital. Taille plus grande: longueur de l'avant-bras dépassant 65 mm. Museau long. 10
- 10 a Bulles tympaniques pourvues d'un méat auditif osseux bien développé. Grande taille.

- Longueur de l'avant-bras comprise entre 110 et 132 mm. Pelage jaunâtre ou brun jaunâtre dans l'ensemble. M1 de la mâchoire inférieure aussi longue que les deux suivantes réunies. *Eidolon helvum*
- b Pas de tube auditif externe osseux. Taille plus faible. Longueur de l'avant-bras comprise entre 75 et 100 mm. Pelage brun noirâtre dans l'ensemble. M1 de la mâchoire inférieure plus courte que les deux suivantes réunies. 11
- 11 a Quatre sillons palataux simples et trois sillons brisés et incurvés. Première prémolaire inférieure beaucoup plus grande que les incisives inférieures. Pelage court, réduit à une étroite bande sur le milieu de la région dorsale. Avant-bras: 88-100 mm. *Rousetus aegyptiacus*
African Chiroptera name *Rousettus aegyptiacus*
- b Trois sillons palataux simples et quatre sillons brisés. Première prémolaire inférieure à peu près de la même taille que les incisives inférieures. Pelage plus long et plus abondant sur le dos. Avant-bras 78-83 mm. *Rousetus angolensis*
African Chiroptera name *Lissonycteris angolensis*
- 12 a Rostre (du bord antérieur de l'orbit à l'extrémité des nasaux) plus long que la largeur palatale au niveau des dernières molaires, Taille grande ou assez grande. Longueur totale dépassant toujours 130 mm. 13
- b Rostre court, à peu près de la même longueur que la largeur palatale au niveau des dernières molaires. Taille très faible. Longueur totale ne dépassant pas 100 mm. 16
- 13 a Grande taille. Longueur de l'avant-bras dépassant 110 mm. Tête grosse à museau terminé par de vastes expansions foliacées. Pas de queue. Palais très étendu. Molaires inférieures pourvues de deux ou trois tubercules. *Hypsignathus monstrosus*
African Chiroptera name *Hypsignathus monstrosus*
- b Taille moins grande. Queue rudimentaire mais toujours présente. Pas d'expansions foliacées à l'extrémité du museau. Molaires inférieures non tuberculées. 14
- 14 a Palais largen aplati et arqué. Quatrième métacarpien plus court que le cinquième. Quatre sillons palataux bien marqués en avant suivis de plusieurs autres sillons beaucoup plus irréguliers. Avant-bras 85-97 mm. *Epomops Franqueti*
- b Palais plus étroit et très déprimé. Quatrième métacarpien à peu près de la même longueur ou plus long que le cinquième. 15
- 15 a Un seul sillon palatal en arrière de la dernière molaire. Avant-bras 74-87 mm. *Epomophorus Wahlbergi*
- b Deux sillons palataux en arrière de la dernière molaire. Rostrum et palais très longs et étroits. Quatrième sillon palatal situé à égale distance entre le troisième et le cinquième. Avant-bras 81-93 mm. *Epomophorus gambianus*
- 16 a Voûte des os palatins non sensiblement prolongée en arrière de la dernière molaire. Une tache blanche en arrière du nez et en arrière des yeux et lèvre supérieure bordée de blanc. Longueur totale atteignant environ 90 mm. *Casinycteris argynnis*
- b voûte des os palatins fortement prolongée en arrière de la dernière molaire. Taille un peu plus faible. 17
- 17 a Dernière molaire supérieure située au niveau du bord antérieur de l'orbite. Palais présentant sur l'animal en chair, un profond sillon médian allant en se rétrécissant vers l'arrière. Museau relativement large. Des touffes blanchâtres à la base des oreilles et des épaules. *Micropteropus pusillus*
- b Dernière molaire supérieure située sensiblement en avant du niveau du bord antérieur de l'orbite. Palais présentant sur l'animal en chair une saillie médiane. Museau plus droit que dans l'espèce précédente. Pas de tache blanche en arrière des oreilles et des épaules. *Nanonycteris Veldkampi*
African Chiroptera name *Micropteropus pusillus*
- 18 a Taille petite: tête et corps 75-90 mm.; avant bras 58-65 mm. Pelage gris brunâtre clair tiqueté dessus. Dessous blanc. *Taphozous mauritanus*
- b Taille plus grande; tête et corps 103-126 mm.; avant-bras 84-95 mm. Pelage brun plus ou moins foncé dessus et dessous. *Saccolaimus Peli*
- 19 a Petite taille: avant-bras n'atteignant pas 40 mm. *Nycteris nana*
- b Taille plus grande: avant-bras dépassant 53 mm. *Nycteris grandis*
- c Taille moyenne. 20
- 20 a Avant-bras 47-50 mm. environ. 21
- b Avant-bras ne dépassant pas 47 mm. 23
- 21 a Tragus court et ovalaire. Pelage brun foncé dessus, brun grisâtre dessous. *Nycteris*

- macrotis*
- 22 b Tragus plus développé, bien dégagé en hauteur et convexe sur son bord interne. 22
 a Dessus marron foncé et dessous blanchâtre. Taille relativement faible. Avant-bras ne dépassant pas 48 mm. *Nycteris thebaica*
 African Chiroptera name *Nycteris thebaica*
 b Dessus et dessous brun sombre. Taille plus grande, avant-bras dépassant 48 mm. *Nycteris major*
- 23 a Dessus brun pâle. Une bande étroite blanchâtre bordant le nez dessus et latéralement. *Nycteris pallida*
 African Chiroptera name *Nycteris hispida*
 b Dessus brun foncé; pas de bande blanchâtre nasale. 24
- 24 a Dessus brun foncé, presque noirâtre sur la partie médiane du dos; dessous plus clair que le dessus. *Nycteris hispida*
 b Dessus et dessous brun sombre. Feuille nasale recouverte de poils épais. . *Nycteris arge*
- 25 a Deux phalanges à chaque doigt. Feuilles nasales arrondies ou tronquées à la partie supérieure, mais non prolongées en pointe. Oreille sans lobe marginal à la base (Genre *Hipposideros*). 26
 b Trois phalanges à chaque doigt, excepté au pouce. Feuille nasale prolongée en pointe dans sa partie supérieure. Un lobe marginal à la base de l'oreille (Genre *Rhinolophus*). *Rhinolophus ferrum-equinum obscurus*.
 African Chiroptera name *Rhinolophus ferrumequinum*
- 26 a Taille moyenne: avant-bras n'atteignant pas 55 mm. 27
 b Taille plus grande: avant-bras atteignant ou dépassant 55 mm. 28
- 27 a Longueur de l'avant-bras comprise entre 46,5 et 53,8 mm. *Hipposideros caffer*
 b Longueur de l'avant-bras comprise entre 42,2 et 44,2 mm. *Hipposideros beatus*
- 28 a Taille relativement très grande: avant-bras 107 mm. environ. Pelage brun olive dessus. Une marque en Y irrégulièrement présente sur le dos... *Hipposideros gigas*
 African Chiroptera name *Hipposideros commersoni*
 b Avant-bras plus court. 29
- 29 a Avant-bras: 92 mm. environ. Coloration générale blanchâtre. Une tache blanche à l'insertion des membranes. *Hipposideros Commersoni*
 b Avant-bras inférieur à 92 mm. 30
- 30 a Pelage d'apparence laineuse de couleur générale brun pourpré. *Hipposideros cyclops*
 b Couleur générale roux cannelle vif. *Hipposideros fuliginosus*
- 31 a Six molaires supérieures et six molaires inférieures de chaque côté de la mâchoire. 32
 b Quatre ou cinq molaires seulement de chaque côté de la mâchoire supérieure. ... 33
- 32 a Boîte crânienne haute et bombée et rostre grêle et déprime. Avant-bras, jambes et pieds bien velus. Pelage long et laineux. Oreilles disposées en entonnoir. Ouvertures nasales circulaires. Les trois prémolaires presque égales. Membrane interfémorale garnie en général de poils sur son bord terminal (Genre *Kerivoula*). 47
 b Boîte crânienne de hauteur normale et plus bombée. Rostre plus épais. Avant-bras et pattes peu velues. Oreilles non disposées en entonnoir. Tragus allongé. Ouvertures nasales en croissant. Troisième prémolaire plus grande que les deux premières (Genre *Myotis*). 37
- 33 a Molaires 5/6. Première phalange du troisième doigt courte, n'atteignant pas la moitié de la longueur de la seconde. Doigts 3 et 4 notablement plus longs que chez les autres Vespertilionidae (Genre *Miniopterus*). *Miniopterus inflatus*
 b Molaires 5/5. Première phalange du troisième doigt plus longue que la seconde (Genre *Pipistrellus*). 40
 c Molaires 4/5. 34
- 34 a Incisives 1-1/3-3. Triangle antérieur de la première et de la deuxième molaire plus grand que le postérieur. Membrane alaire épaisse (Genre *Scotophilus*). *Scotophilus nigrata nux* ou *Scotophilus nigrata herero*.
 b Incisives 2-2/3-3. 35
- 35 a Lèvre inférieure munie de lobes commisuraux. Rostre étroit. Hauteur du crâne avec les bulles dépassant les deux tiers de sa longueur basilaire. Dessus clair (Genre *Glauconycteris*). 39
 b Lèvre inférieure sans lobes commissuraux. Rostre large. Hauteur du crâne avec les bulles beaucoup moins grande que les deux tiers de sa longueur basilaire. 6

- 36 a Crâne plat et large. Ailes remarquablement courtes et réduites, le troisième doigt n'étant pas plus long que la longueur de la tête et du corps (Genre *Mimetillus*).
.....*Mimetillus Moloneyi*
- b Crâne de longueur normale et pas spécialement aplati. Ailes grandes. Oreilles de taille moyenne (Genre *Eptesicus*). 44
- 37 a Pelage entièrement noir. *Myotis megalopus*
- b Pelage roux cannelle ou grisâtre dessus, gris cannelle ou blanchâtre dessous. 38
- 38 a Dessus roux cannelle. Dessous gris cannelle. Avant-bras 33-40 mm. environ. *Myotis Bocagei*
African Chiroptera name *Myotis bocagii*
- b Dessus grisâtre. Dessous blanchâtre. Avant-bras 54 mm. environ. *Myotis africanus*
- 39 a Couleur générale gris argenté. *Glauconycteris argentatus*
African Chiroptera name *Glauconycteris argentata*
- b Dessus crème. Dessous blanchâtre. *Glauconycteris variegata*
- c Couleur générale brun noirâtre uniforme. *Glauconycteris beatrix*
- 40 a Avant-bras 24 à 25 mm. *Pipistrellus musciculus*
African Chiroptera name *Hypsugo musciculus*
- b Avant-bras dépassant 25 mm. 41
- 41 a Dessous blanc teinté de jaunâtre. *Pipistrellus Rüppelli*
African Chiroptera name *Pipistrellus rueppellii*
- b Dessous plus sombre. 42
- 42 a Avant-bras 28 mm. environ. Tête et corps 47 mm. Dessus brun fumeux. Dessous un peu plus clair. *Pipistrellus crassulus*
African Chiroptera name *Hypsugo crassulus*
- b Avant-bras 30-33 mm. Tête et corps 37-47. Dessus brun sépia ou noirâtre. Dessous plus clair. *Pipistrellus nanus*
- c Taille plus faible. Tête et corps ne dépassant généralement pas 41 mm. 43
- 43 a Oreilles longues et pointues, le bord externe étant près des commissures labiales.
..... *Pipistrellus Pagenstecheri*
African Chiroptera name *Pipistrellus nanus*
- b Oreilles assez courtes et franchement arrondies. *Pipistrellus nanulus*
- 44 a Avant-bras 55 mm. environ. Dessus brun foncé et dessous blanc jaunâtre. *Eptesicus serotinus gabonensis*
African Chiroptera name *Eptesicus serotinus*
- b Avant-bras n'atteignant pas 55 mm. 45
- 45 a Tête et corps 31 mm. environ. Teinte générale brun noirâtre foncé. Dessous légèrement plus clair que le dessus. *Eptesicus pusillus*
African Chiroptera name *Neoromicia "incertae-sedis"*
- b Tête et corps dépassant 35 mm. Teinte générale non brun noirâtre. 46
- 46 a Tête et corps 40-46 mm. Dessus brun plus ou moins foncé et dessous cendré blanchâtre. *Eptesicus tenuipennis*
African Chiroptera name *Neoromicia tenuipinnis*
- b Tête et corps 37 mm. Dessus brun rougeâtre et dessous plus clair. *Eptesicus Grandidieri*
African Chiroptera name *Neoromicia capensis*
- 47 a Avant-bras 27 mm. Une frange de poils sur le bord postérieur de la membrane interfémorale. *Kerivoula muscilla*
African Chiroptera name *Kerivoula lanosa*
- b Avant-bras 34-35 mm. Pas de frange sur le bord postérieur de la membrane interfémorale. *Kerivoula cuprosa*
- 48 a Troisième molaire complète à tubercules formant une marque en N sur sa surface (Genre *Mops*). 52
- b Troisième molaire incomplète à tubercules formant une marque en V sur sa surface. 49
- 49 a Prémaxillaires complets couvrant complètement la zone située entre les incisives médianes. Incisives supérieures non en contact l'une avec l'autre. Une touffe de poils sur la nuque chez le mâle. Un bandeau interauriculaire bien marqué et formant parfois un bourrelet frontal (Genre *Choerophon*). 50
- b Prémaxillaires incomplets et laissant apparaître une émargination entre les incisives medianes. Incisives supérieures en contact l'une avec l'autre. Pas de bandeau

- interauriculaire marqué. Oreilles de forme plutôt carrée (Genre *Nyctinomus*).
 *Nyctinomus brunneus*
 African Chiroptera name *Tadarida aegyptiaca bocagei*
- 50 a Pas de bande blanche sur les flancs le long de la membrane alaire. *Choerophon frater*
 African Chiroptera name *Chaerephon leucogaster*
- b Une bande blanche sur les flancs en bordure de l'insertion de la membrane alaire. 51
- 51 a Une zone blanche sur la partie médiane du dessous, couvrant le ventre et la région
 inguinale. *Choerophon limbatus*
 African Chiroptera name *Chaerephon pumilus*
- b Zone blanche limitée à la zone médiane. *Choerophon cristatus*
 African Chiroptera name *Chaerephon leucogaster*
- 52 a Avant-bras 31 mm. environ. Dessus brun noir; dessous blanc jaunâtre sale. ... *Mops*
leonis
 African Chiroptera name *Mops (Xiphonycteris) brachypterus*
- b Avant-bras dépassant 31 mm. 53
- 53 a Avant-bras 47-49 mm. Dessus brun foncé clair et dessous plus clair. .*Mops Osborni*
 African Chiroptera name *Mops (Mops) condylurus*
- b Avant-bras 41 mm. environ. Couleur général brun noisette. *Mops thersites*
 African Chiroptera name *Mops (Xiphonycteris) thersites*

Appendix 5d: Roberts (1951). The mammals of South Africa

1	a	Megachiroptera	2
	b	Microchiroptera	4
2	a	Size largest, forearm about 100 mm, skull length about 50 mm, no white patch at the base of ears; jugal bone not broadened opposite the supraorbital process; 3 premolars and 2 molars above; M/1 twice the size of M/2.....	<i>Eidolon helvum</i>
	b	Size smaller, forearm less than 100 mm, skull length less than 45 mm, no white patch at base of ears; jugal bone not broadened opposite the supraorbital process; 3 premolars and 2 molars above; M/1 equal to M/2	<i>Rousettus leachii</i>
		African Chiroptera name	<i>Rousettus aegyptiacus</i>
	c	Size large or small, but forearm less than 90 mm, skull length over 50 mm, a white patch present at the base of ear; the jugal broadened opposite the supraorbital process; only 2 premolars and one molar above.....	3
3	a	With one post-dental palate ridges; palate shorter (MM: 29.5 - 30.5), but broader at M ¹ (14.8 - 16) (FF 25 - 27 x 13.6 - 15)	<i>Epomophorus wahlbergi wahlbergi</i>
		African Chiroptera name	<i>Epomophorus wahlbergi</i>
	b	With two post-dental palate ridges; palate longer (MM 32 - 34), but narrower at m ¹ (13.3 - 14.5) (FF 29 - 31.5 x 12.8 - 13.5)	<i>Epomophorus crypturus</i>
		African Chiroptera name	<i>Epomophorus gambianus crypturus</i>
4	a	With horseshoe nose-leaves.....	5
	b	Without horseshoe nose-leaves.....	6
5	a	A median sella and posterior lancet-like, erect, cutaneous processes; frontal region of skull narrowly constricted; nasal bulbs higher than frontals (Rhinolophidae).....	9
	b	No median sella, though posterior erect processes may be present; frontal region of skull narrowly constricted by nasal bulbs hardly raised above the level of the frontals (Hipposideridae)	22
6	a	Nostrils situated in a slit on th face, ears long and spatulate; frontal region of skull broad and hollowed by raised, thin, laterally expanded, plates (Nycteridae)	23
	b	Nostrils simple	7
7	a	Nostrils exposed at the end of the muzzle; tail, when present, to the interfemoral membrane, projecting slightly beyond in some genera; premaxilla more or less divided distally by a space between the lateral sections, which ar ecushed against the maxilla and bear incisors; suprapostorbital processes absent (Vespertilionidae)	26
	b	Tail protruding from the interfemoral membrane	8
8	a	Tail protruding from the upper surface of the interfemoral membrane; premaxilla a thin bone on each side, wide apart, not clearly visible, situated close up against the maxillaries, which are narrow in front and bear strong canines; frontals flat; suprapostorbital processes absent (Emballonuridae).....	<i>Taphozous mauritanus</i>
	b	Tail protruding from the middle of the margin of the interfemoral membrane; premaxilla present as thin bone bearing a large incisor on each side, a wide space between them; frontals hollowed; cranium vrey large and high above the muzzle; no supraorbital processes (Molossidae).....	53
9	a	Width of horseshoe over 9 mm, skull length from canines over 23 mm.....	10
	b	Width of horseshoe less than 9 mm, skull length from canines under 23 mm	11
10	a	Size larger; forearm 62 - 67, skull length from canines 26 - 28; length c-m ³ 9.2 - 10.1; ears larger, length 29 - 32.....	<i>Rhinolophus hildebrandti hildebrandti</i>
		African Chiroptera name	<i>Rhinolophus hildebrandtii</i>
	b	Size smaller, forearm 56 - 58, skull length from canines 24; c-m ³ 8.7 - 9; ears shorter, 21 - 22.5.....	<i>Rhinolophus aethiops</i>
		African Chiroptera name	<i>Rhinolophus fumigatus</i>
11	a	p ³ outside the toothrow, c and p ⁴ in contact.....	12
	b	p ³ within the toothrow, c and p ⁴ not in contact	17
12	a	Tibia and hind-foot 30 - 34.5	13
	b	Tibia and hind-foot 26 - 30	15
13	a	Skull length from canines 22 - 23; upper c-m ³ length 8.1 - 9; lower c-m/3: 8.8 - 9.4	14
	b	Skull length from canines 20.7 - 22.4; upper c-m ³ 7.8 - 8.4; lower c-m/3 8.2 - 9..	16
14	a	Forearm 54 - 57	<i>Rhinolophus geoffroyi augur</i>
		African Chiroptera name	<i>Rhinolophus clivus</i>
	b	Forearm 51 - 54.5	<i>Rhinolophus geoffroyi geoffroyi</i>

- 15 a African Chiroptera name *Rhinolophus clivosus*
 General colour lighter *Rhinolophus geoffroyi zuluensis*
 African Chiroptera name *Rhinolophus clivosus*
 b General colour darker *Rhinolophus geoffroyi zambesiensis*
 African Chiroptera name *Rhinolophus clivosus*
- 16 a Average length of forearm 47, of skull from canines 20, of upper c-m³ 7.3, of lower c-m/3 7.9; colour drab-grey below *Rhinolophus darlingi darlingi*
 African Chiroptera name *Rhinolophus darlingi*
 b Average length of forearm 46, of skull length from canines 19.2, of upper c-m³ 7.1, of lower c-m/3 7.4; colour drab grey below *Rhinolophus darlingi barbertonensis*
 African Chiroptera name *Rhinolophus darlingi*
 c Average length of forearm 49, of skull from canines 20, of upper c-m³ 7.4, of lower c-m/3 7.9; colour paler above and whiter below *Rhinolophus darlingi damarensis*
 African Chiroptera name *Rhinolophus darlingi*
- 17 a Saddle rising to a narrow and high point in the posterior half (as seen from the side) 18
 b Saddle not rising to a narrow and high point in the posterior half (as seen from the side) 19
- 18 a Anterior face of the saddle rounded above, posterior connecting process broad at the base; forearm 44 - 46; skull length from canines 18 - 18.6; width across m³ about 7 mm; p/3 outside tooththrow *Rhinolophus lobatus*
 African Chiroptera name *Rhinolophus landeri*
 b Anterior face of saddle pointed above, posterior connecting process narrow at the base, the process like a horn, curving forward; forearm 46.5 - 48; skull length from canines 19 - 19.8; width across m³ only 6.1 - 6.4; p/3 within the tooththrow *Rhinolophus empusa*
 African Chiroptera name *Rhinolophus blasii*
- 19 a Forearm 47 - 51; skull length from canines 20 - 21.3, upper c-m³ 7.5 - 7.8, lower c-m/3 8 - 8.5 *Rhinolophus capensis*
 b Forearm less than 47, skull length from canines less than 19, c-m³ less than 7, c-m/3 less than 7.5 20
- 20 a Wing membrane from the lower third of the tibia; tail 21 - 30, ear 19 - 21; size larger, forearm 42.5 - 45, skull length from canines 18 - 18.7, c-m³ 6.4 - 7, c-m/3 6.8 - 7.3 *Rhinolophus simulator*
 b Wing membrane from lower third of tibia; tail 21, ear 20; size smaller, forearm 42, skull length 17, c-m³ 5.9, c-m/3 6.6 *Rhinolophus denti*
 c Wing membrane from near the ankle; tail 18 - 22, ear 15 - 18, size small, forearm 40 - 43.75; skull length from canines under 18, c-m³ 6 - 6.7, c-m/3 6.3 - 7 21
- 21 a Size largest, forearm 42.5 - 43.75, tail 19.5; colour as in swinnyi swinnyi *Rhinolophus swinnyi piriensis*
 African Chiroptera name *Rhinolophus swinnyi*
 b Size smaller, forearm 40 - 42; H & B 42 - 47, tail 18 - 19, skull length from canines 17.2 - 17.7, upper c-m³ 6 - 6.7, lower c-m/3 6.3 - 7, colour wood brown above, below avellaneous *Rhinolophus swinnyi swinnyi*
 African Chiroptera name *Rhinolophus swinnyi*
 c Size smallest, forearm 40, H & B 52, tail and foot, c.u. 24, ear 15, skull length from canines 17, upper c-m³ 6.3, lower c-m/3 6.5; colour near salmon-orange above and below, tipped with orange-rufous above *Rhinolophus swinnyi rhodesiae*
 African Chiroptera name *Rhinolophus swinnyi*
- 22 a Size largest, forearm over 75, skull length from canines over 30 mm, ears fairly long and pointed; hair short; back of nose-leaf in a transverse tickened ridge; skull powerful, broad in the muzzle, canines long and strong, sagittal crest from frontals to occiput as a high keel. *Phyllorhina commersoni marungensis*
 African Chiroptera name *Hipposideros commersoni*
 b Size intermediate, much smaller, forearm between 45 and 55, skull length between 16 and 20 mm; ears short and round, with only a slight tip; hair longer; back of nose-leaf with a thin transverse ridge; skull much lighter, narrower in the muzzle, the sagittal crest is not so high and extending only to the back of frontals. *Hipposideros caffer*
 c Size very small, forearm less than 36; skull length less than 14 mm; ears short, rounded and hardly rising above the level of the hair; back of nose-leaf with a trident-like set of processes; skull very high, broad in the muzzle, but canines not very large;

		sagittal crest not much developed and not extending behind the frontals. <i>Cloeotis percivali</i>	
23	a	Forearm less than 41 mm.....	24
	b	Forearm over 41 mm	25
24	a	Size smallest, forearm 38; ear 17 mm; upper and lower incisors trifurcate <i>Nycteris hispida villosa</i>	
		African Chiroptera name	<i>Nycteris hispida</i>
	b	Size small, forearm 40, ear 32 - 34; incisors bifurcate.....	<i>Nycteris woodi sabiensis</i>
		African Chiroptera name	<i>Nycteris woodi</i>
25	a	Size large, forearm 42 - 49; ear 28 - 32; upper tooththrow 6.5 - 7; colour buffy to orange-rufous on head and below.....	<i>Nycteris capensis capensis</i>
		African Chiroptera name	<i>Nycteris thebaica</i>
	b	Forearm 48 - 49; ear 33 - 37; upper tooththrow 7.3 - 7.5; colour white on head and below	<i>Nycteris capensis damarensis</i>
		African Chiroptera name	<i>Nycteris thebaica</i>
26	a	Surface of forearm, tail and tibia thickly sprinkled with pointed excrescences.	<i>Rhinopterus notius</i>
		African Chiroptera name	<i>Neoromicia capensis</i>
	b	Forearm, tail and tibia without pointed excrescences.....	27
27	a	Second phalanx of third finger not more than two-and-a-half times the length of the first phalanx	28
	b	Second phalanx of third finger nearly three times the length of the first phalanx; cranium much swollen; 2 upper and 3 lower pairs of incisors, 2 upper and 3 lower pairs of premolars; ears square (genus <i>Miniopterus</i>)	37
28	a	Frontal region of the skull much swollen, high above the muzzle, which is rather narrow, and above the parietals; hair inclined to be curly on the back; 2 upper and 3 lower pairs of incisors, 3 upper and 3 lower pairs of premolars; ears pointed (genus <i>Kerivoula</i>).....	38
	b	Frontal region not so swollen, if above the level of the muzzle then not above the level of the parietals; hair above not inclined to be curly	29
29	a	Outer upper incisor in contact with the canine; a fleshy lobe at the angle of the mouth connected by a ridge with the lobe of the ear; wing membranes with dark-rayed markings (genus <i>Glauconycteris</i>).....	52
	b	Outer upper incisor not in contact with the canine; no fleshy lobe at the angle of the mouth, if present then not connected with lobe of the ear; wing membranes plainly uniform.....	30
30	a	Cranium raised above the level of the muzzle.....	31
	b	Cranium practically level with the muzzle.....	34
31	a	Forearm over 40 mm, ear length over 13 mm (genus <i>Myotis</i>).....	43
	b	Forearm under 40, ear under 13 mm	32
32	a	Two minute premolars above, placed transverse to the tooththrow between the canine and large premolar (genus <i>Cistugo</i>).....	44
	b	Only one minute premolar above, in the tooththrow between the canine and large premolar.....	33
	c	No minute premolar above -only one large premolar.	<i>Neoromicia zuluensis</i>
33	a	Outer upper incisors more than half the height of the inner incisor; inner upper incisor unicuspid.....	<i>Pipistrellus nanus</i>
	b	Similar, but inner upper incisor bicuspid.....	<i>Vansonia vernayi</i>
		African Chiroptera name	<i>Pipistrellus rueppellii vernayi</i>
	c	Outer upper incisor less than half the height of the inner incisor. <i>Romicia kuhlii broomi</i> (This should be <i>Pipistrellus hesperidus</i> . See Kock (2001))	
		African Chiroptera name	<i>Pipistrellus hesperidus</i>
34	a	Skull with a keel-like lambdoid process.....	35
	b	Skull without a keel-like lambdoid process.....	36
35	a	Size larger, forearm over 45 mm, one upper incisor and one upper premolar on each side (genus <i>Scotophilus</i>).....	49
	b	Lambdoid process can be absent; its size variable, typically forearm over 45 mm, but others much less; two upper incisors, but only one upper premolar on each side (genus <i>Eptesicus</i>)	46
36	a	Size very small, forearm under 34 mm, only one upper incisor and one upper premolar	

- on each side. *Scoteinus schlieffenii*
 African Chiroptera name *Nycticeinops schlieffenii*
- 37 b No lambdaoid crest; forearm under 31 mm; two upper incisors and two upper premolars
 on each side (genus *Eptesicops*) 45
- 37 a Size slightly larger, skull length from premaxilla over 15, upper c-m³ series 5.6 - 5.9
 mm..... *Miniopterus natalensis natalensis*
 African Chiroptera name *Miniopterus natalensis*
- 38 b Size slightly smaller, skull length from premaxilla under 15, upper c-m³ series 5.3 -
 5.5 mm..... *Miniopterus fraterculus*
- 38 a Size small, forearm 30 - 33, wingspan 250 - 260, greatest skull length 12.9 - 13.5,
 width of braincase 6.1 - 7.3 39
- 38 b Size larger, forearm 34 - 39, wingspan 265 - 300, greatest skull length from canines
 15 or more mm, width of brain-case 7.3 - 7.7 40
- 39 a Colour darker, below grey for the greatest part..... *Kerivoula lanosa lanosa*
 African Chiroptera name *Kerivoula lanosa*
- 39 b colour lighter, below white for the greatest part..... *Kerivoula lanosa lucia*
 African Chiroptera name *Kerivoula lanosa*
- 40 a Hair of upper parts of body grey at the base; outer upper incisors rudimentary
 *Kerivoula aerea*
- 40 b Hair of upper parts of body white at the base, outer upper incisor nearly as large as
 the inner..... 41
- 41 a Long-winged, forearm 39, wingspan about 280 - 300 .. *Kerivoula argentata argentata*
 African Chiroptera name *Kerivoula argentata*
- 41 b Shorter-winged, forearm 35.5, wingspan about 265 - 280..... 42
- 42 a Colour below buffy-white..... *Kerivoula argentata nidicola*
 African Chiroptera name *Kerivoula argentata*
- 42 b Colour below smoky greyish-white *Kerivoula argentata zuluensis*
 African Chiroptera name *Kerivoula argentata*
- 43 a Size larger, forearm over 53 mm, interfemoral membrane red *Myotis welwitschii*
- 43 b Size smaller, forearm under 53; interfemoral membrane brown..... *Myotis tricolor*
- 44 a Size smaller, forearm 32.5, skull length 13.2..... *Cistugo seabrae*
- 44 b Size larger, forearm 34.5, skull length 14.4 *Cistugo lesueuri*
- 45 a Size larger; skull length 11.5 - 11.8 mm *Eptesicops rusticus*
 African Chiroptera name *Pipistrellus rusticus*
- 45 b Size smaller, skull length 11 mm *Eptesicops subtilis* / *Eptesicops fouriei*
- 46 a Size larger, forearm over 40; skull with a keel-like lambdaoid crest 47
- 46 b Size smaller, forearm under 40, skull without a keel-like lambdaoid crest..... 48
- 47 a Colour dark, above brownish-olive, tips of hair honey-yellow *Eptesicus hottentota*
hottentota
 African Chiroptera name *Eptesicus hottentotus*
- 47 b Colour very light and yellowish, lighter than "clay colour" *Eptesicus hottentota pallidior*
 African Chiroptera name *Eptesicus hottentotus*
- 48 a Forearm 34.5 - 38; skull length form canines 14.7 - 15.7; width of braincase 7.1 - 7.9;
 colour "sayal brown" *Eptesicus melckorum*
 African Chiroptera name *Neoromicia melckorum*
- 48 b Forearm 32.5 - 34.5; skull length 13.5 - 14; width of braincase 6.7 - 7.2; colour
 yellowish-brown *Eptesicus capensis capensis*
 African Chiroptera name *Neoromicia capensis*
- 48 c Forearm 32 - 35; skull length 14 - 14.9; width of braincase 6.8 - 7.2; colour paler
 yellowish-brown and white below *Eptesicus capensis damarensis*
 African Chiroptera name *Neoromicia capensis*
- 48 d Forearm 30-32; skull length 13 - 13.8; width of braincase 6.5 - 7; colour yellowish-
 brown, less whitish below *Eptesicus capensis gracilior*
 African Chiroptera name *Neoromicia capensis*
- 48 e Forearm 31-33.5; skull length 13.3 - 13.5; width of braincase 6.5 - 7; colour paler
 brown, especially below, which is whiter *Eptesicus capensis nkatiensis*
 African Chiroptera name *Neoromicia capensis*
- 49 a Forearm length 49.5 - 58, skull length 20.5 - 23; width of braincase 9.2 - 10.5 50
- 49 b Forearm length 46.5 - 52; skull length 17 - 19.2; width of braincase 8.9 - 9 51
- 50 a Colour white below..... *Scotophilus herero*

- African Chiroptera name *Scotophilus dinganii*
- b Colour lighter yellow below *Scotophilus nigrita dinganii*
(This should be *Scotophilus dinganii*. See Robbins (1978))
- African Chiroptera name *Scotophilus dinganii*
- c Colour darker yellow below *Scotophilus nigrita pondoensis*
- African Chiroptera name *Scotophilus dinganii*
- 51 a Colour dark yellow below *Scotophilus viridis viridis*
- African Chiroptera name *Scotophilus viridis*
- b Colour white below *Scotophilus viridis damarensis*
- African Chiroptera name *Scotophilus leucogaster*
- 52 a Creamy coloured below *Glauconycteris variegata papilio*
- African Chiroptera name *Glauconycteris variegata*
- b White below *Glauconycteris variegata variegata*
- African Chiroptera name *Glauconycteris variegata*
- 53 a Ears very large, over 30 mm in length *Otomops icarus*
- African Chiroptera name *Otomops martiensseni icarus*
- b Ears shorter than 30 mm 54
- 54 a Ears joined at the base, premaxilla fused anteriorly 55
- b Ears separated at the base, premaxilla divided anteriorly 56
- 55 a Forearm under 45 mm, skull length under 18 mm, two premolars above (genus
Chaerephon) 58
- b Forearm over 45 mm, skull length over 18 mm, only one upper premolar *Mops condylurus*
- African Chiroptera name *Mops (Mops) condylurus*
- 56 a Ears pointed, with 3 lower pairs of incisors (genus *Mormopterus*) Null
- b Ears squared, only 2 pairs of lower incisors 56
- 57 a Skull not so flattened, height of braincase about half its width (genus *Tadarida*) ... 59
- b Skull much flattened, height of braincase about one-third of its width (genus
Platymops) 60
- 58 a Middle of lower breast to abdomen white *Chaerephon limbatus limbatus*
- African Chiroptera name *Chaerephon pumilus*
- b White below confined to lower abdomen and border of membrane; colour above
brown to dark brown; crest in MM 4 mm *Chaerephon limbatus elphicki*
- African Chiroptera name *Chaerephon pumilus*
- c White below confined to lower abdomen and border of membranes; colour above
dusky drab, crest in MM 9 mm *Chaerephon limbatus langi*
- African Chiroptera name *Chaerephon pumilus*
- d No pure white below, but whitish; above drab; crest in MM 13 mm *Chaerephon limbatus shorridgei*
- African Chiroptera name *Chaerephon chapini*
- 59 a Lips not wrinkled; colour bright orange-chestnut above and below; larger, forearm 64
..... *Tadarida africana*
- African Chiroptera name *Tadarida ventralis*
- b Lips not wrinkled; colour chocolate-brown to orange-chestnut above and below, but
with a broad white line on the integument from forearm to the pubic region and thence
up to middle of body to the chest; rather smaller, forearm 57 *Tadarida mastersoni*
- African Chiroptera name *Tadarida fulminans*
- c Lips wrinkled; colour chocolate-brown above and below, with the throat darker;
forearm 45, skull length about 19, lower tooththrow 8.3; lower canines in contact
..... *Tadarida rhodesiae*
- African Chiroptera name *Chaerephon ansorgei*
- d Lips wrinkled; colour greyish-brown above and below; forearm 47 - 51.5, skull length
19 - 20.5, lower tooththrow 8 - 8.5; lower canines wide apart *Tadarida aegyptiaca*
- African Chiroptera name *Tadarida aegyptiaca*
- e Lips wrinkled; colour greyish-brown above and below; forearm 42 - 47, skull length
17.3 - 18.6, lower tooththrow 6.8 - 7.5; lower canines wide apart *Tadarida bocagei*
- African Chiroptera name *Tadarida aegyptiaca bocagei*
- 60 a Size larger, forearm 38 - 42, skull length 16.8 - 18, c-m³ series 6.1 - 6.5 61
- b Size smaller, forearm 36 - 37; skull length 16 - 16.4, c-m³ series 5.6 - 5.8 62
- 61 a Colour tawny-olive above, lighter tawny-olive below *Platymops petrophilus petrophilus*

- African Chiroptera name *Sauromys petrophilus petrophilus*
- b Colour paler above, especially on head and neck, more whitish below..... *Platymops petrophilus fitzsimonsi*
- African Chiroptera name *Sauromys petrophilus umbratus*
- c Colour considerably paler above all over, and below much more whitish... *Platymops petrophilus erongensis*
- African Chiroptera name *Sauromys petrophilus erongensis*
- 62 a Colour above pale tawny-olive, below whitish, ears paler brown. *Platymops haagneri haagneri*
- African Chiroptera name *Sauromys petrophilus haagneri*
- b Colour above smoky seal-brown, below paler and more buffy; ears blackish *Platymops haagneri umbratus*
- African Chiroptera name *Sauromys petrophilus umbratus*

Appendix 5e: Malbrant (1952). Faune du Centre African français (Mammifères et Oiseaux).

- 1 a Couronne des molaires aplatie et lisse sans tubercules marqués. Pouce et second doigt des membres antérieurs terminés par des griffes. Taille variable, souvent grande ou très grande mais parfois très petite. Queue absente ou rudimentaire (Sous-ordre des Megachiroptères, Chauves-souris frugivores: Famille Pteropidae). 8
- b Couronne des molaires pourvue de tubercules aigus. Deuxième doigt des membres antérieurs non terminés par une griffe. Queue en général bien développée, incluse au moins en partie dans la membrane interfémorale. Taille faible (Sous-ordre des Microchiroptères, Chauves-souris insectivores). 2
- 2 a Queue à extrémité libre dépassant sensiblement la membrane interfémorale. 3
- b Queue entièrement incluse dans la membrane interfémorale ou ne la dépassant que d'une partie de la dernière vertèbre caudale. 4
- 3 a Un tragus auriculaire petit et arrondi mais bien visible. Pas de feuilles nasales. Museau légèrement allongé. Membres postérieurs glèles. Queue grêle perforant la membrane interfémorale et saillant sur la face supérieure. Oreilles largement séparées (Famille Emballonuridae)..... *Taphozous mauritanus*
- b Tragus auriculaire petit, parfois même rudimentaire. Pas de feuilles nasales. Museau tronqué obliquement. Membres postérieurs trapus. Queue épaisse à la base débordant la membrane interfémorale, qui est étroite, d'au moins un tiers de sa longueur. Oreilles très rapprochées et souvent même reliées entre elles par une bande cutanée sur le front, à bords postérieurs bien descendus sur la joue (Famille Molossidae). 15
- 4 a Pas de feuilles nasales. Un tragus auriculaire grêle et droit. Oreilles en général petites et largement séparées (Famille Vespertilionidae)..... 12
- b Feuilles nasales plus ou moins développées mais toujours présentes. 5
- 5 a Queue beaucoup plus courte que la membrane interfémorale dont elle ne dépasse pas le bord d'insertion. Oreilles très grandes soudées à leur base avec un tragus allongé en pointe et bifurqué. Membranes, oreilles et tragus de couleur orangé. Feuilles nasales bien développées (Famille Megadermidae). *Lavia frons*
- b Queue dépassant le bord d'insertion de la membrane interfémorale. Oreilles plus petites, non soudées à la base. Tragus arrondi quand il existe, ou absent. 6
- 6 a Feuilles nasales présentes. Nez compliqué d'un profond sillon médian longitudinal. Oreilles grandes. Tragus de grandeur variable mais généralement petit. Queue atteignant l'extrémité de la membrane interfémorale et formant un Y renversé à sa jonction avec celle-ci (Famille Nycteridae). *Nycteris aethiopica*
African Chiroptera name *Nycteris macrotis*
- b Feuilles nasales développées et compliquées, affectant, en général la forme d'un fer à cheval. Pas de sillon nasal. Pas de tragus. Queue se terminant en pointe dans la membrane interfémorale. 7
- 7 a Feuilles nasales pourvues d'un lobe aigu à la partie supérieure. Trois phalanges aux orteils II à V (Famille Rhinolophidae). 10
- b Feuilles nasales à lobe supérieur tronqué, non aigu. Deux phalanges seulement aux orteils II à V (Famille Hipposideridae). *Hipposideros caffer* ou *Asellia tridens*.
- 8 a Molaires 5/6. Tête sans taches, ni touffes blanches. Grande taille, Longueur de l'avant-bras comprise entre 110 et 130 mm. Pelage jaunâtre ou brun jaunâtre dans l'ensemble. M1 de la mâchoire supérieure aussi longue que les deux suivantes réunies. *Eidolon helvum*
- b Molaires. 3/5. Tête du mâle souvent pourvue de taches ou de touffes blanches. Taille moyenne. Longueur de l'avant-bras ne dépassant pas 100 mm. Rostre (du bord antérieur de l'orbite à l'extrémité des nasaux) plus long que la largeur palatale au niveau des dernières molaires. 9
- 9 a Dessus brun jaunâtre légèrement teinté de grisâtre, plus clair dessous. *Epomophorus Pousarguesi*
African Chiroptera name *Epomophorus gambianus pousarguesi*
- b Dessus plus clair, café au lait plus ou moins foncé. *Epomophorus gambianus*
- 10 a Taille assez grande. Longueur de l'avant-bras atteignant 50 mm. . *Rhinolophus Foxi*
African Chiroptera name *Rhinolophus fumigatus*
- b Taille plus faible. Longueur de l'avant-bras n'atteignant pas 47 mm. 11

- 11 a Dessous gris manron clair..... *Rhinolophus acrotis* Schwarzzi
African Chiroptera name *Rhinolophus clivosus*
b Dessous jaune. *Rhinolophus Dobsoni*
African Chiroptera name *Rhinolophus landeri*
- 12 a Molaires 5/5. Deux paires d'incisives à la mâchoire supérieure. Première phalange du troisième doigt plus longue que la seconde (Genre *Pipistrellus*). *Pipistrellus deserti* ou *Pipistrellus marrensis* ou *Pipistrellus Rüppelli* ou *Pipistrellus Kuhli*
b Molaires 4/5. Une seule paire d'incisives à la mâchoire supérieure. 13
- 13 a Mésostyle (petit tubercule placé en partie médiane sur le côté externe de la dent) de la première et seconde molaire supérieure réduit, et marque en W formée par les cônes principaux rétrécie en son milieu. Triangle antérieur de la 1re et 2e molaire plus grand que le postérieur (Genre *Scotophilus*). *Scotophilus nigrita leucogaster*
African Chiroptera name *Scotophilus leucogaster*
b Marque en W de la 1re et 2e molaire normale. Triangle antérieur de la première et deuxième molaire plus petit que le postérieur. 14
- 14 a Couronne de la troisième molaire pourvue d'une marque en W (Genre *Scotoecus*).
..... *Scotoecus falabae*
African Chiroptera name *Scotoecus hindei*
b Couronne de la troisième molaire pourvue d'une marque en V (Genre *Scoteinus*).
..... *Scoteinus Schlieffeni*
African Chiroptera name *Nycticeinops schlieffenii*
- 15 a Incisives supérieures séparées; prémaxillaires complets couvrant complètement la zone située entre les incisives médianes. Une touffe de poils sur la nuque chez le mâle. Oreilles unies à leur base par un bandeau interauriculaire bien marqué formant parfois un bourrelet frontal (Genre *Choerophon*). *Chaerophon Websteri*
African Chiroptera name *Chaerophon leucogaster*
b Incisives supérieures en contact l'une avec l'autre..... 16
- 16 a Une émargination profonde entre les incisives médianes s'étendant en arrière de leur racine. Oreilles très rapprochées, parfois même réunies à leur base, mais sans bandeau interauriculaire marqué. Tragus petit, aplati, généralement tronqué et carré à l'extrémité (Genre *Nyctinomus*). *Nyctinomus tongaensis*
b Pas d'émargination entre les incisives médianes, on seulement une petite encoche qui ne s'étend pas en arrière de leur racine. Oreilles nettement séparées à leur base. Tragus assez grand, aplati, généralement arrondi à l'extrémité (Genre *Myopterus*).
..... *Myopterus albatius*
African Chiroptera name *Myopterus daubentonii*

Appendix 5f: Hoogstraal (1962). A brief review of the contemporary land mammals of Egypt (including Sinai). 1. Insectivora and Chiroptera.

- 1 a Second finger with claw. Forearm 88 - 99. Fruit bat. *Rousettus aegyptiacus aegyptiacus*
African Chiroptera name *Rousettus aegyptiacus*
- 2 a Second finger lacking claw. Forearm much shorter. Insectivorous bats. 2
b Tail not projecting through center of membrane. 4
- 3 a Tail projecting through center of membrane. (Genus *Taphozous*) 3
b Lower back furred. Tail 24 - 32. *Taphozous perforatus perforatus*
African Chiroptera name *Taphozous perforatus*
- 4 a Lower back not furred. Tail 35 - 40. *Taphozous nudiventris nudiventris*
African Chiroptera name *Taphozous nudiventris*
- 5 a Muzzle with nose leaf or leaves. 5
b Muzzle lacking nose leaves. 10
- 6 a Nose leaves in three parts. Tail and ears not as following. 7
b Nose leaf single, short triangular. Tail exceedingly long and slender. Ears united (Genus *Rhinopoma*). 6
- 7 a Tail (59 - 80) longer than forearm (54 - 62). *Rhinopoma hardwickei cystops*
African Chiroptera name *Rhinopoma hardwickii*
- 8 a Tail (56 - 71) shorter than forearm (62 - 72). *Rhinopoma microphyllum microphyllum*
African Chiroptera name *Rhinopoma microphyllum*
- 9 a Anterior nose leaf flat against muzzle and not notched anteriorly; posterior nose leaf tridentate. Approximately one-fourth of length of tail extending beyond wing-membrane, Forearm 47 - 53. *Asellia tridens tridens*
African Chiroptera name *Asellia tridens*
- 10 a Anterior nose leaf horizontal and deeply notched anteriorly; posterior nose leaf triangular. Little if any of tail extending beyond wing membrane. (Genus *Rhinolophus*). 8
b Second phalanx of 3rd and 4th fingers more than 1.5 times length of first phalanges; one mental groove. (*Rhinolophus clivosus* subsp.). 9
- 11 a Pale. Forearm 46 - 51. Eastern Desert and Sinai. *Rhinolophus clivosus clivosus*
African Chiroptera name *Rhinolophus clivosus*
- 12 a Dark. Forearm .44 - 48. Nile Valley. *Rhinolophus clivosus brachygnatus*
African Chiroptera name *Rhinolophus clivosus*
- 13 a Second phalanx of 3rd finger more than 1.5 times length of first phalanx, second phalanx of 4th fin-twice length of first phalanx; three mental grooves. Forearm 43 - 50. *Rhinolophus mehelyi*
- 14 c Second phalanges of all fingers 1.5 times (or nearly so) length of first phalanges. Forearm 24 - 38. *Rhinolophus hipposideros minimus*
African Chiroptera name *Rhinolophus hipposideros*
- 15 a Upper lips not wrinkled. Ears with tragus. 12
b Upper lips wrinkled. Ears broad, tragus lacking. Medium to large bats. (Genus *Tadarida*). 11
- 16 a Forearm 50 - 55. *Tadarida aegyptica aegyptiaca*
African Chiroptera name *Tadarida aegyptiaca aegyptiaca*
- 17 a Forearm 59 - 65. *Tadarida teniotis ruppelli*
African Chiroptera name *Tadarida teniotis*
- 18 a Ears much longer than head. 13
b Ears shorter than or only slightly longer than head. 15
- 19 a Muzzle traversed by longitudinal furrow containing nostrils and bordered by valvular folds. Forearm 41 - 47. *Nycteris thebaica thebaica*
African Chiroptera name *Nycteris thebaica*
- 20 b Muzzle not as above. 14
- 21 a Forearm 37.7 - 39.2 *Plecotus auritus christiei*
African Chiroptera name *Plecotus christii*
- 22 a Forearm 57 - 65. *Otonycteris hemprichi hemprichi*
African Chiroptera name *Otonycteris hemprichii*
- 23 a Muzzle with a pair of swellings above nostrils. Ears very close together, almost joined across forehead. Forearm about 40. (Rare, Red Sea area only). *Barbastella*

- leucomelas leucomelas*
- 16 b Muzzle lacking pair of swellings above nostrils. Ears well separated. 16
 - 16 a Two upper incisors. Ears clearly longer than broad. 17
 - 16 b One upper incisor. Ears about as broad as long. Forearm 30 - 32.. (Known only by 2 specimens). *Nycticeius schlieffeni schlieffeni*
African Chiroptera name *Nycticeinops schlieffenii*
 - 17 a Forearm more than 37 (40 - 44). *Eptesicus isabellinus innesi*
African Chiroptera name *Eptesicus bottae*
 - 18 b Forearm less than 37 (30 - 35). (Genus *Pipistrellus*)..... 18
 - 18 a Underparts white, sharply set off from dark brown upper parts. Forearm 30 - 34.
..... *Pipistrellus ruppelli ruppelli*
African Chiroptera name *Pipistrellus rueppellii rueppellii*
 - 18 b Underparts light brown, grading into dark brown upper parts. Outer upper incisor less than one half height of inner upper incisor. Wing periphery usually white. Forearm 30 - 36..... *Pipistrellus kuhli kuhli*
African Chiroptera name *Pipistrellus kuhlii*
 - 18 c Outer upper incisor more than one half height of inner upper incisor. Wing periphery brown. Forearm 30. (Known only from Southeastern Desert). *Pipistrellus ariel*
African Chiroptera name *Hypsugo ariel*

Appendix 5g: Hayman et al. (1966). The bats of the Congo and of Rwanda and Burundi

1	a	Cheekteeth without W-pattern of cusps ; second finger with claw; tail absent or rudimentary (suborder Megachiroptera; fam. Pteropidae).....	8
	b	Cheekteeth with W-pattern of cusps; second finger entirely included in patagium and without claw; tail generally well developed (suborder Microchiroptera)	2
2	a	Tail completely included in uropatagium (in certain forms the last vertebra can be free)	3
	b	Tail not completely included in uropatagium	7
3	a	No nasal appendages; tragus present ; ears not fused in the mediosagittal plane (fam. Vespertilionidae)	51
	b	Nasal appendages present	4
4	a	No tragus; ears not fused mediosagittally	5
	b	Tragus present (sometimes small); ears fused or very close to each other mediosagittally	6
5	a	Posterior leaflet of nose-leaf low, rounded or tridentate (fam. Hipposideridae)	37
	b	Posterior leaflet of nose-leaf high, erect, pointed (fam. Rhinolophidae)	44
6	a	Tail shorter than uropatagium; no postorbital processes; no premaxillae present (fam. Megadermidae).....	<i>Lavia frons</i>
	b	Tail as long as uropatagium; last vertebra Y or T shaped; postorbital process and premaxillae present (fam. Nycteridae)	28
7	a	Basal part of tail included in uropatagium ; distal part of tail resting free on the dorsal side of the uropatagium; ears not fused (fam. Emballonuridae)	24
	b	Distal part of tail not included in uropatagium and not resting on the dorsal side of the uropatagium; ears mostly united to each other by a cutaneous wall (fam. Molossidae)	82
8	a	Tongue simple, fixed to floor of mouth by posterior half, and without unfringed filiform papillae at tip (subfam. Pteropinae).....	9
	b	Tongue more extensible, fixed to floor of mouth by its posterior third, its terminal fourth or fifth covered above with unfringed filiform papillae (subfam. Macroglossinae)	<i>Megaloglossus woermanni</i>
9	a	No white tufts present at base of ears.....	10
	b	White tufts at base of ears	13
10	a	3 upper cheekteeth; forearm 48 - 54 mm	<i>Scotonycteris zenkeri</i>
	b	5 upper cheekteeth	11
11	a	Facial axis of skull not noticeably deflected against basicranial axis; forearm less than 67 mm.....	<i>Myonycteris wroughtoni</i>
		African Chiroptera name	<i>Myonycteris (Myonycteris) torquata wroughtoni</i>
	b	Facial axis of skull more or less strongly deflected against basicranial axis; forearm 75 - 130 mm.....	12
12	a	Forearm 115 - 130 mm; M/1 equal in length to M/2 and M/3 combined; tympanic forming a short auditory meatus; premaxillae spaced in front	<i>Eidolon helvum</i>
	b	Forearm 79 - 99 mm; M/1 shorter than M/2 and M/3 combined; no long auditory meatus; premaxillae in contact or co-ossified in front (g. Rousettus)	18
13	a	Cheekteeth 4/6 unusual weak dentition; interfemoral membrane greatly reduced absence or rudimentary condition of calcar.....	<i>Plerotes anchietae</i>
	b	Cheekteeth 3/5	14
14	a	Distance of anterior border of orbit to tip of nasals much longer than lacrymal breadth	15
	b	Distance of anterior border of orbit to tip of nasals less than lacrymal breadth (at most equal to).....	17
15	a	Postdental palate flattened posteriorly; rostrum long and broad.....	16
	b	Postdental palate deeply depressed posteriorly; rostrum long and narrow (g. <i>Epomophorus</i>)	20
16	a	Rostrum considerably increased in depth; premaxillae ankylosed together anteriorly; lower incisors and canines closing some distance in front of upper; outer ridge of lower molars bilobed or trilobed; upper lip with cutaneous leaves; tail absent; no shoulder pouches or tufts in either sex; forearm 118 - 137 mm.....	<i>Hypsignathus monstrosus</i>

- b Rostrum not deeper than usual; premaxillae in simple contact anteriorly; lower incisors and canines biting against corresponding upper teeth; outer ridge of lower molars simple; muzzle without cutaneous leaves; tail rudimentary; males with shoulder pouches and erectile shoulder tufts; forearm 88 - 96 mm (g. *Epomops*) 22
- 17 a No postzygomatic palate, the mesopterygoid fossa continued forward nearly to level of posterior molar *Casinycteris argynnus*
- b Postzygomatic palate present; soft palate with a deep median groove, narrowing posteriorly (g. *Micropteropus*) 23
- 18 a Pm/1 subequal in bulk to a lower incisor; premaxillae co-ossified braincase slightly deflected; wings from second toe; fur long and silky; forearm 79 - 83.5 mm *Rousettus angolensis*
African Chiroptera name *Lissonycteris angolensis*
- b Pm/1 much larger in bulk than a lower incisor; premaxillae in contact; braincase conspicuously deflected; forearm at least 88.0 mm 19
- 19 a Braincase moderately deflected; width of last upper premolar about 1/3 of palate between fronts of last upper premolars; wings from first toe; antitragal lobe distinct *Rousettus aegyptiacus*
- b Braincase strongly deflected; cheekteeth excessively narrow; width of last upper premolar about 1/5 of that of the palate between fronts of last upper premolars; wings from second toe; antitragal lobe obsolete; fur long and coarse *Rousettus lanosus*
- 20 a One conspicuous postdental palate-ridge; total length skull 44 - 50.5 mm (MM), 47 - 55.5 mm (FF); forearm 72 - 86 mm (FF), 77 - 89 mm (MM) *Epomophorus wahlbergi*
- b Two conspicuous postdental palate-ridges 21
- 21 a Forearm 60 - 65.5 mm; total length skull 35.8 - 39.7 mm; no sexual differences in dimensions *Epomophorus labiatus*
African Chiroptera name *Epomophorus labiatus minor*
- b Forearm 66.5 - 74 mm (FF), 71.5 - 78 mm (MM); total length skull 40 - 45 mm (FF), 46 - 48.8 mm (MM) *Epomophorus anurus*
African Chiroptera name *Epomophorus labiatus*
- c Forearm 79 - 80 mm (FF), 81 - 85.5 mm (MM); total length skull 46 - 49.7 mm (FF), 52 - 55 mm (MM) *Epomophorus crypturus*
African Chiroptera name *Epomophorus gambianus crypturus*
- d Forearm 81 - 86.5 mm (FF), 87 - 93 mm (MM); total length skull 52 - 55 mm (FF), 59.7 - 62 mm (MM) *Epomophorus gambianus*
- 22 a 4 thick prominent interdental and about 5 - 7 thinner postdental palate ridges *Epomops franqueti*
- b 3 thick and prominent interdental palate ridges; postdental palate with two pairs of prominent, triangular ridges at middle and one or a few thin and serrate ridges at palation border *Epomops dobsoni*
African Chiroptera name *Epomops dobsonii*
- 23 a Forearm 50 - 53 mm; total skull length 29 - 29.8 mm *Micropteropus pusillus*
- b Forearm 59 - 63 mm; total skull length 33.2 - 33.4 mm *Micropteropus intermedius*
- 24 a Forearm normally less than 52 mm *Coleura afra*
- b Forearm more than 52 mm 25
- 25 a Forearm more than 80 mm (83 - 96 mm); fur dark to base *Taphozous peli*
African Chiroptera name *Saccolaimus peli*
- b Forearm less than 80 mm; fur light at base 26
- 26 a Forearm more than 70 mm, posterior part of body naked above and below *Taphozous nudiventris*
- b Forearm less than 70 mm; body fully haired 27
- 27 a Dorsally light brown, ventrally light greyish-brown *Taphozous sudani*
African Chiroptera name *Taphozous perforatus sudani*
- b Dorsally grizzled grey, ventrally pure white *Taphozous mauritanus*
- 28 a Second premolar of lower jaw large (equal to or larger than half of the first lower premolar); I¹-2 bifid (I² exceptionally trifold) (*arge*-group) 31
- b Second lower premolar small (smaller than half of the first lower premolar) 29
- 29 a I¹-2 bifid 30
- b I¹-2 trifold (*hispid*a-group) 34
- 30 a Tragus semilunate (*aethiopic*a-group) 35
- b Tragus pyriform (free portion narrowest at base; its outer and inner margin evenly

- convex) (*thebaica*-group) 36
- 31 a Forearm length more than 39 mm; skull length less more 19 mm 32
 b Forearm length less than 38 mm; skull length less than 19 mm 33
- 32 a Forearm length 47.3 - 50 mm; skull length 20.9 - 22.4 mm; ear length measuring 50 - 65 % of forearm length *Nycteris major*
 b Forearm length 39.5 - 46 mm; skull length 19.3 - 20.9 mm; ear length measuring 63 - 77 % of forearm length *Nycteris arge*
- 33 a Forearm length 36.5 - 37 mm; skull length 18 - 18.7 mm; tibia longer than half the forearm length *Nycteris intermedia*
 b Forearm length 32 - 36.2 mm; skull length 15.9 - 16.6 mm; tibia shorter than half the forearm length *Nycteris nana*
- 34 a Forearm length 39 - 43 mm *Nycteris hispida*
 b Forearm length about 57 mm *Nycteris grandis*
- 35 a Ear length 22 - 26 mm *Nycteris aethiopica*
 African Chiroptera name *Nycteris macrotis*
 b Ear length 28 - 34 mm *Nycteris macrotis*
- 36 a Second lower premolar included in the toothrow; forearm length about 45 mm *Nycteris capensis*
 African Chiroptera name *Nycteris thebaica*
 b Second lower premolar on the lingual side of toothrow; forearm length about 47 mm *Nycteris thebaica*
- 37 a Rostrum less than half as long as braincase; nasal inflation inconspicuous; ears low; tridentate nose-leaf small, forearm 31 - 35.0 mm *Cloeotis percivali*
 b Rostrum at least half as long as braincase; nasal inflation conspicuous; ears more prominent; no tridentate nose-leaf; larger, forearm about 42 mm and more (g. *Hipposideros*) 38
- 38 a Ears long and narrow, pointed; cochleae greatly expanded, their width equal to at least 4 times their distance apart 41
 b Ears short, broad, rounded or triangular; cochleae not expanded, their width approximately equal to their distance apart 39
- 39 a Ears rounded or broadly triangular, bluntly pointed upper incisors weak, the outer lobe obsolescent or obsolete; crown area of outer lower incisors equal to or only slightly greater than that of the inner lower incisors 42
 b Ears triangular, pointed upper incisors strong, usually retaining much of the outer lobe; crown area of the outer lower incisors much greater than that of the inner lower incisors 40
- 40 a Ears with a small projection at the antitragal fold; sphenoidal bridge narrow, not concealing lateral apertures; pterygoid wings underdeveloped ; forearm from 58 - 66 mm *Hipposideros abae*
 b Ears without antitragal modification; sphenoidal bridge wide, partially concealing lateral apertures; pterygoid wings expanded; forearm from 78 - 114 mm *Hipposideros commersoni*
- 41 a Smaller, length of forearm less than 74.0 mm; anteorbital foramen relatively large *Hipposideros cyclops*
 b Larger, length of forearm exceeding 74.0 mm; anteorbital foramen relatively small *Hipposideros camerunensis*
- 42 a Posterior nose-leaf without a transverse supplementary structure developed from its posterior face or with such a structure low, undeveloped and lacking a serrated upper edge *Hipposideros fuliginosus*
 b Posterior nose-leaf having a transverse supplementary structure with a serrated upper edge developed from its posterior face 43
- 43 a Anterior upper premolar small, slightly extruded from toothrow, or compressed between canine and second upper premolar *Hipposideros caffer*
 b Anterior upper premolar minute, extruded from toothrow, canine and second upper premolar in contact or nearly so *Hipposideros beatus*
- 44 a First upper premolar placed between the upper canine and second premolar 45
 b First upper premolar missing or very reduced and external to toothrow; the canine and second premolar touching each other or nearly so 49
- 45 a Connecting process of nose-leaf rises to a distinct point 46
 b Connecting process of nose-leaf low or obsolete 47

- 46 a First phalange of fourth finger long, more than half as long as second ... *Rhinolophus blasii*
 b First phalange of fourth finger shorter *Rhinolophus landeri*
- 47 a Connecting process of nose-leaf obsolete; forearm 55 mm or more *Rhinolophus ruwenzorii*
 b Connecting process of nose-leaf low and rounded 48
- 48 a Forearm length 49 - 54 mm; skull length 22.4 - 23.3 mm *Rhinolophus alcyone*
 b Forearm length 40 - 45 mm; skull length 17.6 mm or less..... *Rhinolophus swinnyi*
- 49 a Face and edges of sella naked; forearm length 50 - 56 mm *Rhinolophus clivosus*
 b Face and edges of sella with long hairs 50
- 50 a Forearm 58 - 65 mm *Rhinolophus hildebrandti*
 African Chiroptera name *Rhinolophus hildebrandtii*
 b Forearm 48-58 mm *Rhinolophus fumigatus*
- 51 a Second phalange of third digit nearly 3 times as long as the first (subfam. Miniopterinae; g. *Miniopterus*) 60
 b Second phalange of the third digit shorter 52
- 52 a Ear slightly but evidently funnel-formed; very high braincase (subfam. Kerivoulinae; g. *Kerivoula*) 61
 b Ears largely open at their base and not funnel-formed; normal braincase (subfam. Vespertilioninae) 53
- 53 a 6 Pm and M in upper and lower jaw (g. *Myotis*) 64
 b Less than 6 Pm and M 54
- 54 a 5 Pm and M in upper and lower jaw (g. *Pipistrellus*) 66
 b 4 Pm and M in upper and 5 in lower jaw 55
- 55 a 1 upper incisor 56
 b 2 upper incisors 57
- 56 a M¹ and M² with W-pattern distorted or nearly absent (g. *Scotophilus*) 70
 b M¹ and M² with W-pattern normal (g. *Nycticeius*) 72
- 57 a Ears very enlarged, about 18 mm and more *Laephotis wintoni*
 b Ears normally much less enlarged 58
- 58 a Very short and broad rostrum; the height of the braincase (with the bullae) more than 2/3 of the condylo-basal length; lower lip with fleshy lobes at angle of mouth (g. *Glauconycteris*) 74
 b Height of the braincase (bullae included) much less than the distance from incisors to posterior zygoma root 59
- 59 a Very shortened wings; the third digit not longer than head and body length; skull much flattened *Mimetillus moloneyi*
 b Normal wings; skull not especially flattened (g. *Eptesicus*) 80
- 60 a Forearm 43 - 47 mm *Miniopterus schreibersi*
 African Chiroptera name *Miniopterus schreibersii*
 b Forearm 45 - 50 mm *Miniopterus inflatus*
 c Forearm 37 - 39 mm *Miniopterus minor*
- 61 a Interfemoral fringe scarcely developed 62
 b Interfemoral fringe well developed 63
- 62 a Forearm 34 mm *Kerivoula smithi*
 African Chiroptera name *Kerivoula smithii*
 b Forearm 26 - 30 mm *Kerivoula phalaena*
- 63 a Size larger, forearm 34 - 40 mm; colour bright orange-rufous above, whitish below *Kerivoula argentata*
 b Size smaller, forearm 26 - 34 mm; colour dark grey or brownish above, dusky below *Kerivoula harrisoni*
 African Chiroptera name *Kerivoula lanosa*
- 64 a With dichromatic wing membranes; forearm 52 - 58 mm *Myotis welwitschi*
 African Chiroptera name *Myotis welwitschii*
 b Wing membranes uniformly dark 65
- 65 a Larger, forearm 47 - 51 mm *Myotis tricolor*
 b Smaller, forearm 33 - 40 mm *Myotis bocagei*
 African Chiroptera name *Myotis bocagii*
- 66 a Outer upper incisor greatly reduced ; entire underside white .*Pipistrellus (Scotozous) rüppelli*

- African Chiroptera name *Pipistrellus rueppellii*
 67 b Outer upper incisor not greatly reduced; underside dark or grey-tipped..... 67
 a Outer edge of tragus angular; fur bicolored above and below *Pipistrellus (Pipistrellus) nanus*
 African Chiroptera name *Pipistrellus nanus*
 68 b Outer edge of tragus curved; fur not bicolored above and below 68
 a Fur bicolored below only *Pipistrellus (Pipistrellus) nanulus*
 African Chiroptera name *Pipistrellus nanulus*
 69 b Fur unicolored above and below 69
 a Size extremely small, forearm 23 - 24 mm; skull not flattened *Pipistrellus (Pipistrellus) musciculus*
 African Chiroptera name *Hypsugo musciculus*
 b Size not so reduced, forearm 28 mm ; skull broad and flattened..... *Pipistrellus (Pipistrellus) crassulus*
 African Chiroptera name *Hypsugo crassulus*
 70 a Very large, forearm about 80 mm *Scotophilus gigas*
 African Chiroptera name *Scotophilus nigrita*
 b Smaller, forearm not over 58 mm..... 71
 71 a Forearm 50 - 58 mm; skull total length 18 - 21 mm *Scotophilus nigrita*
 (This should be *Scotophilus dinganii*. See Robbins (1978))
 African Chiroptera name *Scotophilus dinganii*
 b Forearm 43 - 50 mm; skull total length 16 - 18 mm *Scotophilus leucogaster*
 72 a Breadth across upper canines 4 mm; M³ reduced *Nycticeius (Scoteinus) schlieffeni*
 African Chiroptera name *Nycticeinops schlieffenii*
 b Breadth across upper canines 5 mm or more; M³ not reduced 73
 73 a Wing membranes dark *Nycticeius (Scotoecus) hirundo*
 African Chiroptera name *Scotoecus hirundo*
 b Wing membranes light *Nycticeius (Scotoecus) albofuscus*
 African Chiroptera name *Scotoecus albofuscus*
 74 a Wing and interfemoral membranes conspicuously veined ... *Glauconycteris variegata*
 b Wing and interfemoral membranes not conspicuously veined 75
 75 a Body colour black and white *Glauconycteris superba*
 b Body colour not black and white 76
 76 a Wing and interfemoral membranes pale brown..... *Glauconycteris argentata*
 b Wing and interfemoral membranes dark brown..... 77
 77 a No light lateral markings on body; colour dark brown..... *Glauconycteris beatrix*
 b Light lateral markings on body; colour dark brown or pale buff 78
 78 a Colour buffy *Glauconycteris poensis*
 b Colour dark brown..... 79
 79 a White spot on shoulder *Glauconycteris humeralis*
 b White spot on shoulder and white flank band..... *Glauconycteris alboguttata*
 African Chiroptera name *Glauconycteris alboguttata*
 80 a Wings pale 81
 b Wings dark; Forearm 26 - 36 mm..... *Eptesicus capensis*
 African Chiroptera name *Neoromicia capensis*
 81 a Dorsal colour dark brown; forearm 28 - 32 mm *Eptesicus tenuipinnis*
 African Chiroptera name *Neoromicia tenuipinnis*
 b Dorsal colour light brown ; forearm 35 - 38 mm *Eptesicus rendalli*
 African Chiroptera name *Neoromicia rendalli*
 82 a A prominent vertical projection on the zygomatic arch; ears very large, about 38 mm
 *Otomops martiensseni*
 b Not combining these characters..... 83
 83 a 4 post-canine upper cheek teeth, 1 lower incisor; upper incisors in contact with
 canines; ears translucent and widely separated (g. *Myopterus*)..... 86
 b 5 post-canine upper cheek teeth (first upper premolar often minute, sometimes
 deciduous); generally two lower incisors, upper incisors not in contact with canines;
 ears not translucent or widely separated (g. *Tadarida*) 84
 84 a M³ reduced, cusps forming V pattern, 3rd. enamel crest, when present, less than half
 length of 2nd. Ears normally conjoined, sometimes with interaural crest (subgenus
Mops)..... 87

	b	M ³ little reduced, cusps forming W pattern, 3rd. enamel crest little reduced; ears conjoined or separate	85
85	a	Palate normally without conspicuous premaxillary emargination, a small notch may be present, not extending back to level of canine roots; ears conjoined, often with interaural crests (subgenus <i>Chaerephon</i>)	94
	b	Palate with conspicuous premaxillary emargination, extending back to level of canine roots; ears generally separate, without interaural crests (subgenus <i>Tadarida</i>)	100
86	a	Size smaller, forearm 33 - 36 mm	<i>Myopterus whitleyi</i>
	b	Size larger, forearm 51 - 56 mm	<i>Myopterus albatrus</i>
		African Chiroptera name	<i>Myopterus daubentonii</i>
87	a	Size smallest, forearm under 31 mm (28 - 31 mm)	<i>Tadarida (Mops) nanula</i>
		African Chiroptera name	<i>Mops (Xiphonycteris) nanulus</i>
	b	Size larger, forearm longer than 35 mm.....	88
88	a	Size largest, forearm over 59 mm (59 - 66 mm.).....	<i>Tadarida (Mops) midas</i>
		African Chiroptera name	<i>Mops (Mops) midas</i>
	b	Size intermediate, forearm under 59 mm	89
89	a	Ears not joined at base; forearm 52 mm	<i>Tadarida (Mops) niangarae</i>
		African Chiroptera name	<i>Mops (Mops) niangarae</i>
	b	Ears joined at base	90
90	a	Males with paired scent glands bordering penis; forearm 42 - 46 mm <i>Tadarida (Mops) demonstrator</i>	
		African Chiroptera name	<i>Mops (Mops) demonstrator</i>
	b	Males without such glands	91
91	a	Forearm over 45 mm	92
	b	Forearm under 45 mm (37 - 41 mm)	93
92	a	Forearm 45 - 50 mm	<i>Tadarida (Mops) condylura</i>
		African Chiroptera name	<i>Mops (Mops) condylurus</i>
	b	Forearm 52 - 57 mm	<i>Tadarida (Mops) congica</i>
		African Chiroptera name	<i>Mops (Mops) congicus</i>
93	a	Underparts brownish, flanks below deep blackish brown ... <i>Tadarida (Mops) thersites</i>	
		African Chiroptera name	<i>Mops (Xiphonycteris) thersites</i>
	b	Underparts whitish, flanks below not blackish brown	<i>Tadarida (Mops) leonis</i>
		African Chiroptera name	<i>Mops (Xiphonycteris) brachypterus</i>
94	a	Distinct projecting separate lobe or lappet between inner bases of ears..... <i>Tadarida (Chaerephon) major</i>	
		African Chiroptera name	<i>Chaerephon major</i>
	b	Without such a lobe or lappet.....	95
95	a	Size larger, forearm over 40 mm.....	96
	b	Size smaller, forearm under 40 mm	99
96	a	No white lateral band on lower border of wing membrane	97
	b	White lateral band on lower border of wing membrane	98
97	a	Forearm 42 - 46 mm	<i>Tadarida (Chaerephon) russata</i>
		African Chiroptera name	<i>Chaerephon russatus</i>
	b	Forearm 48 - 52 mm	<i>Tadarida (Chaerephon) aloysii-sabaudiae</i>
		African Chiroptera name	<i>Chaerephon aloysiisabaudiae</i>
98	a	Wing membranes dark above ; forearm 44 - 50 mm <i>Tadarida (Chaerephon) nigeriae</i>	
		African Chiroptera name	<i>Chaerephon nigeriae</i>
	b	Wing membranes pale above ; forearm 48 - 50 mm <i>Tadarida (Chaerephon) spillmanni</i>	
		African Chiroptera name	<i>Chaerephon nigeriae spillmanni</i>
99	a	Males with long sharply bicolored interaural crest; forearm 34 - 37 mm..... <i>Tadarida (Chaerephon) chapini</i>	
		African Chiroptera name	<i>Chaerephon chapini</i>
	b	Males with crest, when present, short and not bicolored; forearm 35 - 40 mm; Wing membranes and underside dark or light..... <i>Tadarida (Chaerephon) pumila (including limbata)</i>	
		African Chiroptera name	<i>Chaerephon pumilus</i>
100	a	Size very large, forearm 60 - 66 mm	101
	b	Size smaller, forearm under 53 mm	102
101	a	Little white on ventral surface..... <i>Tadarida (Tadarida) africana</i>	
		African Chiroptera name	<i>Tadarida ventralis</i>

- b Clear white ventral band *Tadarida (Tadarida) fulminans*
 African Chiroptera name *Tadarida fulminans*
- 102 a With pair of cutaneous glands opening on undersurface of tail membrane near tail root
 (in both sexes) ; forearm 44 - 47 mm *Tadarida (Tadarida) cistura*
 African Chiroptera name *Chaerephon bemmellini*
- b Without such glands..... 103
- 103 a With conspicuous black throat patch; forearm 45 - 48 mm..... *Tadarida (Tadarida)*
ansorgei
 African Chiroptera name *Chaerephon ansorgei*
- b Without such throat patch; forearm 52 mm *Tadarida (Tadarida) brunnea*
 African Chiroptera name *Tadarida aegyptiaca bocagei*

Appendix 5h: Hayman and Hill (1971). Order Chiroptera: The mammals of Africa

1	a	Second digit terminating in a claw in all African genera; margin of ear conch forming a complete ring; tragus always absent; interfemoral membrane greatly reduced, little more than a narrow band along inside margin of hind legs; tail absent or rudimentary in all African genera; cheek teeth simple, without well-developed cusp pattern (suborder MEGACHIROPTERA; family PTEROPODIDAE)	2
	b	Second digit without a claw; margin of ear conch not forming a complete ring; tragus generally present (absent in two families); interfemoral membrane generally well-developed; tail generally well-developed (absent in one family); cheek teeth cuspidate with generally clearly defined W-pattern (suborder MICROCHIROPTERA)	37
2	a	Tongue with tip rounded and not densely papillate, not highly extensible; cheek teeth not extremely reduced (subfamily PTEROPODINAE)	3
	b	Tongue with long pointed tip, densely papillate, highly extensible; cheek teeth extremely reduced (subfamily MACROGLOSSINAE) <i>Megaloglossus woermanni</i>	
3	a	Facial pattern of white nose and eye patches	4
	b	No facial pattern as above	5
4	a	Post-dental palate present (genus <i>Scotonycteris</i>)	14
	b	Post-dental palate absent <i>Casinycteris argynnis</i>	
5	a	Ears with white basal tufts.....	6
	b	Ears without white basal tufts.....	11
6	a	Size very large, forearm 118 or more; rostrum very deep, end of muzzle truncated, ending in fleshy plate; no white shoulder tuft in Male	<i>Hypsignathus monstrosus</i>
	b	Size smaller, forearm 45-100; rostrum shallow, end of muzzle simple; white shoulder tuft in adult Male.....	7
7	a	Cheek teeth 4/6, 4/5 or 5/6; interfemoral membrane greatly reduced, no more than a narrow flange; calcar absent	<i>Plerotes anchietai</i>
		African Chiroptera name	<i>Plerotes anchietae</i>
	b	Cheek teeth 3/5; interfemoral membrane well developed, calcar present	8
8	a	Forearm 60 - 100	9
	b	Forearm 45 - 55	10
9	a	Six prominent palatal ridges, not more than two being post-dental; the latter not differentiated from inter-dental ridges; post-dental palate strongly concave posteriorly (genus <i>Epomophorus</i>)	15
	b	Five, or 9-11, palatal ridges, with sometimes from 5 to 7 post-dental; latter strongly differentiated from inter-dental ridges; post-dental palate flattened posteriorly (genus <i>Epomops</i>)	22
10	a	Rostrum broad; 5-6 palatal ridges, obviously divided by median groove (genus <i>Micropteropus</i>)	24
	b	Rostrum slender; 12-13 palatal ridges, only posterior group narrowly divided	<i>Nanonycteris veldkampi</i>
11	a	Forearm generally more than 100; tail present or absent.....	12
	b	Forearm generally under 100; short tail present.....	13
12	a	Forearm generally more than 120; distinctive colour pattern, generally a red or yellowish mantle contrasting strongly with black or cream dorsal region, or entirely black; no sharp demarcation of dorsal fur; no tail occipital region of skull tubular; distribution entirely non-continental (genus <i>Pteropus</i>).....	26
	b	Forearm generally 110 - 130; colour generally tawny, with dorsal fur restricted to narrow median band, sharply demarcated from naked wing membranes; short tail; occipital region not tubular; distribution continental and Madagascar <i>Eidolon helvum</i>	
13	a	Forearm 65 - 102; muzzle longer; M ² not greatly reduced; ruff of stiff hair present or absent on lower neck in adult Male (genus <i>Rousettus</i>)	34
	b	Forearm 55 - 65; muzzle shorter; M ² greatly reduced; ruff of stiff hair on lower neck of adult Male (genus <i>Myonycteris</i>)	36
14	a	Forearm 45 - 55; total skull length 24 - 26; no white tuft at base of ears <i>Scotonycteris zenkeri</i>	
	b	Forearm 74 - 78; total skull length 38 - 40; white tuft at base of ears <i>Scotonycteris ophiodon</i>	
15	a	One post-dental palatal ridge; forearm 77 - 89 (males), 72 - 86 (females) <i>Epomophorus</i>	

		<i>wahlbergi</i>	
	b	Two post-dental palatal ridges	16
16	a	4th palatal ridge midway between 3rd and 5th	17
	b	4th palatal ridge much nearer 3rd than 5th	20
17	a	Smaller, no noticeable sexual size difference; forearm 60 - 66 <i>Epomophorus labiatus</i> African Chiroptera name	<i>Epomophorus labiatus minor</i>
	b	Larger, noticeable sexual size difference; forearm not less than 70 (males), 66 (females).....	18
18	a	Forearm 87 - 93 (males), 81 - 86 (females)	<i>Epomophorus gambianus</i>
	b	Forearm less than above	19
19	a	Forearm 71 - 78 (males), 66 - 74 (females)	<i>Epomophorus anurus</i>
		African Chiroptera name	<i>Epomophorus labiatus</i>
	b	Forearm 81 - 85 (males), 79 - 80 (females)	<i>Epomophorus crypturus</i>
		African Chiroptera name	<i>Epomophorus gambianus crypturus</i>
20	a	6th palatal ridge posterior to middle of post-dental palate; forearm 82 (females)	<i>Epomophorus reii</i>
		African Chiroptera name	<i>Epomophorus labiatus</i>
	b	6th palatal ridge anterior to middle of post-dental palate	21
21	a	Forearm 87 - 91 (males), 82 (females).....	<i>Epomophorus angolensis</i>
	b	Forearm 91 (females)	<i>Epomophorus pousarguesi</i>
		African Chiroptera name	<i>Epomophorus gambianus pousarguesi</i>
22	a	3 thick and prominent interdental palatal ridges, post-dental palate with two pairs of thick ridges, each with two triangular projections; forearm 88 (Male) <i>Epomops dobsoni</i> African Chiroptera name	<i>Epomops dobsonii</i>
	b	4 interdental and 5 - 7 post-dental palatal ridges; latter thin, serrate, arcuate	23
23	a	3rd interdental palatal ridge nearly always undivided; zygomatic breadth about three- fifths total skull length; forearm 88 - 96 (Males), 82 - 93 (Females) <i>Epomops franqueti</i>	
	b	3rd interdental palatal ridge broadly divided in centre; zygomatic breadth about half total skull length; forearm 92 - 100 (Males), 88 - 92 (Females) . <i>Epomops buettikoferi</i>	
24	a	Six palatal ridges; 2nd to 6th narrowly divided medially, arranged in two parallel lines of separate pairs; forearm 63 - 65.8, total skull length 36.5..... <i>Micropteropus grandis</i> African Chiroptera name	<i>Epomophorus grandis</i>
	b	Five palatal ridges.....	25
25	a	2 - 5 palatal ridges, widely separated anteriorly by a deep V-shaped groove, not arranged in separate pairs; smaller, forearm 48 - 54, total skull length c. 30	<i>Micropteropus pusillus</i>
	b	2 - 5 palatal ridges, divided medially, converging posteriorly in clearly separate pairs; larger, forearm 58 - 63.5, total skull length 32 - 33.4.....	<i>Micropteropus intermedius</i>
26	a	Forearm under 100; fur notably woolly and dense; ears hidden in fur (Réunion, Mauritius)	<i>Pteropus subniger</i>
	b	Forearm over 120; fur not woolly and dense; ears not hidden in fur.....	27
27	a	General colour above and below a dark seal-brown or black (sometimes a rufous shoulder spot); ears rounded; forearm 162 - 172 (Comoro Is.) .. <i>Pteropus livingstonei</i> African Chiroptera name	<i>Pteropus livingstonii</i>
	b	Mantle and back with strongly contrasting bicolor pattern; ears pointed.....	28
28	a	Mantle and median spinal tract blackish, contrasting with pale buff flanks; forearm 159 - 171 (Réunion, Mauritius).....	<i>Pteropus niger</i>
	b	Mantle red or yellow, back blackish.....	29
29	a	Forearm under 141	30
	b	Forearm over 141	31
30	a	Forearm 124 - 127 (Rodriguez).....	<i>Pteropus rodricensis</i>
	b	Forearm 130 - 141 (Aldabra I.).....	<i>Pteropus aldabrensis</i>
31	a	Ears longer, 37 - 38; forearm 158 - 171 (Madagascar)	<i>Pteropus rufus</i>
	b	Ears shorter, 32 or less; forearm 143 - 161.....	32
32	a	Ears 21 - 23; forearm 151 - 161 (Pemba I.).....	<i>Pteropus voeltzkowi</i>
	b	Ears 31 - 32	33
33	a	Back sprinkled with grey; forearm 143 - 154 (Seychelles).....	<i>Pteropus seychellensis</i>
	b	Back not sprinkled with grey; forearm 151 - 157 (Comoros: Mafia I.).....	<i>Pteropus comorensis</i>
		African Chiroptera name	<i>Pteropus seychellensis</i>

- 34 a Wings from first toe; hair short and sleek; cheek teeth heavy; forearm generally above 90 (up to 105); premaxillaries in contact, not co-ossified; adult males without collar of stiff hairs (Subgenus *Rousettus*) *Rousettus aegyptiacus*
 b Wings from second toe; hair longer and coarser; cheek teeth reduced in bulk; forearm generally below 90; premaxillaries either in contact, or co-ossified; adult males with or without differentiated collar of stiff hairs 35
- 35 a Braincase strongly deflected; cheek teeth very narrow; premaxillaries not co-ossified; no differentiated collar in adult males; forearm 65 - 90, tibia 39 - 40 (Subgenus *Stenonycteris*) *Rousettus lanosus*
 b Braincase slightly deflected; cheek teeth short and broad; premaxillaries co-ossified; collar of stiff hairs in adult males; forearm 66 - 83, tibia 25 - 34 (Subgenus *Lissonycteris*) *Rousettus angolensis*
 African Chiroptera name *Lissonycteris angolensis*
- 36 a Canines not shortened; lower canines clearly longer than P/3; outer and inner ridges of P/4 fused anteriorly; cheek teeth lighter; no sagittal crest (Subgenus *Myonycteris*) *Myonycteris torquata*
 African Chiroptera name *Myonycteris (Myonycteris) torquata*
 b Canines unusually shortened; lower canines conspicuously shorter than P/3; outer and inner ridges of P/4 widely separated; cheek teeth heavier; sagittal crest present (Subgenus *Phygetis*) *Myonycteris brachycephala*
 African Chiroptera name *Myonycteris (Phygetis) brachycephala*
- 37 a Tragus present (small in Molossidae) 38
 b Tragus absent 45
- 38 a Tail with terminal portion projecting to a marked degree free of interfemoral membrane 39
 b Tail entirely enclosed within interfemoral membrane (exceptions in *Asellia* and *Hipposideros jonesi*, both Hipposideridae, both with a slight degree of terminal projection); or entirely absent 42
- 39 a Free terminal portion of tail emerges above middle of upper surface of interfemoral membrane (family EMBALLONURIDAE) 47
 b Free terminal portion of tail projecting considerably beyond hind margin of interfemoral membrane 40
- 40 a Free portion of tail very slender and very long, much longer than interfemoral membrane (family RHINOPOMATIDAE; genus *Rhinopoma*) 46
 b Free terminal portion of tail stout, not appreciably longer than interfemoral membrane 41
- 41 a Sessile disc on thumb; ear with basal stalked mushroom-shaped process (family MYZOPODIDAE) *Myzopoda aurita*
 b Without such disc or process (family MOLOSSIDAE) 171
- 42 a Tail absent; nose-leaf present (family MEGADERMATIDAE) 65
 b Tail always present; nose-leaf present or absent 43
- 43 a Muzzle without nose-leaves of any kind (family VESPERTILIONIDAE) 100
 b Muzzle with nose-leaves 44
- 44 a Muzzle with deep central longitudinal slit lined with fleshy dermal outgrowths (family NYCTERIDAE) 55
 b Face with well-developed nose-leaves covering muzzle 45
- 45 a Posterior leaflet of nose-leaf subtriangular, with erect pointed tip; toes with three phalanges (family RHINOLOPHIDAE; genus *Rhinolophus*) 66
 b Posterior leaflet of nose-leaf with upper edge either elliptical in outline, or tridentate; toes with two phalanges (family HIPPOSIDERIDAE) 82
- 46 a Forearm generally over 60 (maximum 75); tail nearly always shorter than forearm; nasal inflation of skull relatively smaller *Rhinopoma microphyllum*
 b Forearm generally under 60 (minimum 46); tail generally longer than forearm; nasal inflation of skull relatively larger *Rhinopoma hardwicki*
 African Chiroptera name *Rhinopoma hardwickii*
- 47 a 4 lower incisors; 2 upper incisors (very minute, often absent); forearm more than 57; gular sac present or absent (genus *Taphozous*) 49
 b 6 lower incisors; 2 or 4 upper incisors; forearm not more than 57; no gular sac 48
- 48 a 2 upper incisors; forearm 45 - 57 (genus *Coleura*) 54
 b 4 upper incisors; forearm 38 *Emballonura atrata*

- 49 a Forearm not exceeding 70; skull with deep frontal depression; radio-metacarpal pouch present; bullae incomplete; total skull length at least 20, up to 22.5 (Subgenus *Taphozous*)..... 51
 b Forearm exceeding 70; skull with frontal depression shallow; bullae complete or incomplete; total skull length 26 - 33..... 50
- 50 a Forearm 70 - 75 (in S.W. Asia up to 82); skull 26 - 28; radio-metacarpal pouch present; bullae incomplete; body not fully haired, rump and pygal areas naked *Taphozous (Liponycteris) nudiventris*
 African Chiroptera name *Taphozous nudiventris*
 b Forearm 84 - 95; skull 30 - 33; bullae complete; no radio-metacarpal pouch; body fully haired..... *Taphozous (Saccolaimus) peli*
 African Chiroptera name *Saccolaimus peli*
- 51 a Entire dorsal fur conspicuously grizzled greyish; entire ventral surface clear white; forearm 58 - 64; large gular sac in male..... *Taphozous (Taphozous) mauritanus*
 African Chiroptera name *Taphozous mauritanus*
 b Dorsal fur never grizzled, either unicolor brownish or white-based with brownish tips; ventral surface either dusky or only partially white; forearm 60 or more; gular sac present or absent..... 52
- 52 a Adult male with conspicuous blackish-brown throat patch contrasting strongly with pale undersurface; Female with slight blackish wash on throat; wings whitish; no gular sac; underside often clear white except for throat area; forearm 65 - 70... *Taphozous (Taphozous) hildegardeae*
 African Chiroptera name *Taphozous hildegardeae*
 b No blackish throat patch; underside generally dusky, not whitish; wings either whitish or dark; forearm 60 - 67 53
- 53 a Skull very broad and heavily built; body and wings very dark; naked gular patch in Females (Male not known); forearm 66..... *Taphozous (Taphozous) hamiltoni*
 African Chiroptera name *Taphozous hamiltoni*
 b Skull not broad or heavily built; wings dark or pale, body paler; no gular patch in either sex; forearm 60 - 67 *Taphozous (Taphozous) perforatus*
 African Chiroptera name *Taphozous perforatus perforatus*
- 54 a Forearm generally below 52, not or only a little more than three times skull length *Coleura afra*
 b Forearm generally over 52 (maximum 57), more than 31 times skull length .. *Coleura seychellensis*
- 55 a Posterior lower premolar very small, its tip reaching approximately to cingulum of anterior premolar; no marked concavity at centre of the posterior margin of tragus 56
 b Posterior lower premolar large, its height equal or almost equal to that of anterior cusp of first molar; marked concavity at centre of posterior margin of tragus (*arge* group) 63
- 56 a Upper incisors trifid (tragus falciform or semilunate) (*hispidus* group)..... 57
 b Upper incisors bifid (tragus semilunate or pyriform) 58
- 57 a Forearm 36 - 45, ear 18 - 25 *Nycteris hispidus*
 b Forearm 57 - 66, ear 28 - 35 *Nycteris grandis*
- 58 a Tragus semi-lunate, base of its posterior margin not notched (*aethiopica* group) .. 59
 b Tragus pyriform, base of its posterior margin shallowly notched (*thebaica* group) . 62
- 59 a General colour greyish (forearm 37 - 42, ear 29 - 34) *Nycteris woodi*
 b General colour brownish 60
- 60 a Forearm 38 - 43, ear 19.2 - 21 *Nycteris parisii*
 b Forearm above 43, ear above 21 61
- 61 a Forearm 45 - 52, ear 22 - 28 *Nycteris aethiopica*
 African Chiroptera name *Nycteris macrotis*
 b Forearm 45 - 50, ear 28 - 34 *Nycteris macrotis*
- 62 a Forearm 42 - 52, ear 28 - 37 *Nycteris thebaica*
 b Forearm 39 - 43, ear 25 - 28 *Nycteris gambiensis*
- 63 a Forearm 32 - 36, ear 20 - 22 *Nycteris nana*
 b Forearm 36 and more, ear above 22..... 64
- 64 a Forearm 36 - 46, ear 28 - 33 *Nycteris arge*
 b Forearm 47 - 50, ear 27 - 32 *Nycteris major*
 African Chiroptera name *Nycteris macrotis*
- 65 a Noseleaf small, evenly rounded above, not more than 10 mm long; tragus with inner

- lobe quadrate or rounded, outer lobe pointed but less than half length of ear
 *Cardioderma cor*
- 66 b Noseleaf long, bluntly truncated at tip, about 20 mm long; tragus with inner lobe sharply pointed, outer lobe pointed and more than half length of ear *Lavia frons*
- 66 a Connecting process behind sella obsolescent, barely marked, very low; antitragus greatly developed..... 67
- 67 b Connecting process behind sella always well-developed, either rounded, erect or long and narrow; antitragus not greatly developed 68
- 67 a Forearm 57 - 68 (generally 63 and over); antitragus with anterior emargination and basal spur *Rhinolophus maclaudi*
- 67 b Forearm 55 - 57; antitragus without anterior emargination and basal spur *Rhinolophus ruwenzorii*
- 68 a Face and/or lateral margins of sella liberally furnished with long hairs; connecting process low, rounded; greatest breadth of horseshoe generally over 9 69
- 68 b Sella naked; connecting process rounded or pointed; greatest breadth of horseshoe generally under 9 70
- 69 a Forearm 62 - 67 *Rhinolophus hildebrandti*
 African Chiroptera name *Rhinolophus hildebrandtii*
- 70 b Forearm 50 - 60 *Rhinolophus fumigatus*
- 70 a Forearm less than 40; connecting process low and blunt; sella cuneate. *Rhinolophus hipposideros*
- 71 b Forearm over 40, except in *R. denti* knorri with forearm 37.5 to 40.5, but with erect connecting process and sella parallel-sided..... 71
- 71 a Anterior upper premolar, when present, external to toothrow; canine and p⁴ in contact; connecting process bluntly pointed..... 72
- 71 b Anterior upper premolar in toothrow; canine and p⁴ not in contact; connecting process blunt or sharply pointed 73
- 72 a Forearm 50 - 57 (See notes below under *R. clivosus*) *Rhinolophus clivosus*
- 72 b Forearm 45 - 50 *Rhinolophus darlingi*
- 72 c Forearm 53 - 60 *Rhinolophus ferrumequinum*
- 73 a 1st phalanx of 4th finger notably shortened in relation to metacarpal length 74
- 73 b 1st phalanx of 4th finger not notably shortened in relation to metacarpal length 76
- 74 a Connecting process rising to erect point; axillary glandular sac in many adult males 75
- 74 b Connecting process lower; rounded; no axillary sac; forearm 45 - 48 *Rhinolophus alticolus*
 African Chiroptera name *Rhinolophus simulator*
- 75 a Forearm 40 - 48 *Rhinolophus landeri*
- 75 b Forearm 49 - 54 *Rhinolophus alcyone*
- 76 a Connecting process rises to high and narrow horn 77
- 76 b Connecting process with low, bluntly pointed tip 79
- 77 a Sella cuneate or wedge-shaped; no marked contrast between crown areas of anterior and posterior lower premolars; forearm 44 - 48 *Rhinolophus blasii*
- 77 b Sella parallel-sided; strong contrast between crown area of anterior and posterior lower premolars 78
- 78 a Posterior lancet of noseleaf gradually narrowing; forearm 45 - 50 *Rhinolophus euryale*
- 78 b Posterior lancet of noseleaf abruptly narrowing to linear tip; forearm 48 - 51
 *Rhinolophus mehelyi*
- 79 a Larger, forearm 47 - 51; skull 20 or more *Rhinolophus capensis*
- 79 b Smaller, forearm 40 - 46; skull 18.7 or less 80
- 80 a Sella broader; ears longer *Rhinolophus simulator*
- 80 b Sella narrower; ears shorter 81
- 81 a Front edge of connecting process almost concave; lancet with sides almost convex; fur whitish at base *Rhinolophus denti*
- 81 b Front edge of connecting process convex; lancet with sides concave, tip pointed; fur nearly unicolored *Rhinolophus swinyi*
- 82 a Posterior leaflet on noseleaf simple in outline, elliptical or rounded, not tridentate; ears either separate or united by low band; rostrum at least half as long as braincase; small upper premolar present, with one exception, i.e. *H. megalotis*; zygoma not greatly expanded; forearm 34 - 115 (genus *Hipposideros*) 85
- 82 b Posterior leaflet of noseleaf tridentate; ears always separate; small upper molar

- present or absent; rostrum sometimes less than half as long as braincase; zygoma not or greatly expanded; forearm 31 - 54 83
- 83 a Tail projecting up to 7 mm beyond end of interfemoral membrane; ears large, 18 - 20, with pointed tip; small upper premolar absent; rostrum at least half as long as braincase; zygoma not greatly expanded; forearm 44 - 54 (genus *Asellia*) 96
- b Tail not projecting beyond end of interfemoral membrane; small upper premolar present..... 84
- 84 a Size very small, forearm 31 - 35; ears very low, rounded, rim-like, 8; noseleaf small and inconspicuous; thumbs minute; rostrum less than half length of braincase; zygoma not greatly expanded *Cloeotis percivali*
- b Size larger, forearm 50 - 54; ears short, 10 - 14, but pointed; noseleaf conspicuous; thumbs normal; rostrum more than half length of braincase; zygoma greatly expanded into wide plate; upper incisors bifid (genus *Triaenops*)..... 97
- 85 a Size very small, forearm less than 40 (34 - 38); ears very large, more than half length of forearm, linked at base by low fold of integument across crown; p² absent *Hipposideros megalotis*
- b Size larger, forearm more than 40; ears not obviously linked in any way; p² present 86
- 86 a Posterior and central noseleaves each bearing a median club-shaped process; size large, forearm 59 - 76; ears narrow and pointed; prominent longitudinal frontal sac in both sexes; colour very distinctive, fur blackish brown with tips frosted with greyish 87
- b Noseleaf without club-shaped process; frontal sacs present or absent 88
- 87 a Forearm 59 - 71 *Hipposideros cyclops*
- b Forearm 74 - 76 *Hipposideros camerunensis*
- 88 a Noseleaf with enlarged pad-like internarial septum, partly concealing nostrils 89
- b Internarial septum not enlarged, not concealing nostrils 91
- 89 a Posterior part of noseleaf elongated, subtriangular in outline; internarial septum large, broader than long; ears very large, about half length of forearm; forearm 44 - 55; no frontal sac *Hipposideros jonesi*
- b Posterior part of noseleaf f usual low arched outline; internarial septum smaller, longer than broad; ears less than half forearm length; frontal sac present 90
- 90 a Two poorly developed lateral leaflets; forearm 42 - 47 *Hipposideros curtus*
- b One rudimentary supplementary lateral leaflet; forearm 40 - 41 *Hipposideros marisae*
- 91 a Size very large, forearm 79 - 115; ears very narrow and pointed; longitudinal frontal sac in both sexes *Hipposideros commersoni*
- b Size moderate, forearm 40 - 66; ears broad..... 92
- 92 a Three secondary lateral leaflets; forearm 58 - 66; frontal sac in both sexes *Hipposideros abae*
- b Two secondary lateral leaflets; forearm 41 - 64; frontal sac present or absent..... 93
- 93 a Frontal sac absent; forearm 59 - 64 *Hipposideros fuliginosus*
- b Frontal sac present, opening transversely; forearm 41 - 58 94
- 94 a Forearm normally 41 - 44, exceptionally to 47; tail 19 - 25..... *Hipposideros beatus*
- b Forearm 44 - 58: tail 30 or more 95
- 95 a Forearm generally less than 48; colour greyish, or pale orange when in bright phase; median posterior narial compartment narrow, with wide lateral inflations *Hipposideros caffer*
- b Forearm generally exceeding 48; colour brownish, or rufous when in bright phase; median posterior narial compartment wide with narrow lateral inflations *Hipposideros ruber*
- 96 a Forearm 45 - 51 *Asellia tridens*
- b Forearm 38 - 41 *Asellia patrizii*
- 97 a Internal border of ear deeply notched; external lobes of trident deeply notched at external base; ears small, c. 12 - 14; forearm over 50 (51 - 55) 98
- b Internal border of ear not notched; external lobes of trident not notched basally; ears large, c 17; forearm under 50 (42 - 47) *Triaenops furculus*
- 98 a Colour pale (in both phases); mainland..... *Triaenops persicus*
- b Colour darker (in both phases); Madagascar 99
- 99 a Colour reddish *Triaenops rufus*
- b Colour greyish-brown *Triaenops humbloti*
- African Chiroptera name *Triaenops rufus*

- 100 a Second phalanx of third digit not especially elongated..... 101
 b Second phalanx of third digit about three times as long as first; braincase high and rounded (subfamily MINIOPTERINAE; genus *Miniopterus*) 168
- 101 a Ears not funnel-shaped, without deep emargination below tip; tragus short and broad, or long and narrow, but not sharply pointed; braincase not particularly high and rounded (subfamily VESPERTILIONINAE) 102
 b Ears funnel-shaped, with deep emargination below tip; tragus long, narrow, sharply pointed; braincase high and rounded (subfamily KERIVOULINAE; genus *Kerivoula*) . 161
- 102 a Six upper, six lower cheek teeth on each side (genus *Myotis*) 113
 b Less than six upper and six lower cheek teeth 103
- 103 a Five upper, six lower cheek teeth; ears much longer than head, nearly equal in length to forearm, joined by low band across crown *Plecotus austriacus*
 b Five upper, five lower cheek teeth; ears not lengthened 104
 c Four upper, five lower cheek teeth; ears only exceptionally notably lengthened.. 107
- 104 a Two upper incisors on each side..... 105
 b One upper incisor on each side (genus *Nycticeius*) (in part) 124
- 105 a Wing with fifth finger shortened, barely longer than metacarpals of 4th and 3rd (genus *Nyctalus*)..... 126
 b Wing with fifth finger not shortened..... 106
- 106 a Ears not joined at base (genus *Pipistrellus*) 127
 b Ears joined at base (genus *Barbastella*) 150
- 107 a Two upper incisors on each side..... 108
 b One upper incisor on each side 111
- 108 a Wing extremely narrow, third digit not longer than head and body; skull flattened; tragus extremely short and blunt..... *Mimetillus moloneyi*
 b Wing not narrowed; skull not flattened; tragus not extremely short and blunt..... 109
- 109 a Rostrum very short and broad; braincase very high more than two-thirds of condylobasal length; lower lip with lobe at posterior angle; frequently with body pattern of spots and/or stripes, or conspicuous reticulation of wing membranes (genus *Glauconycteris*) 151
 b Rostrum not shortened; braincase not elevated; no body or wing pattern..... 110
- 110 a Ear 18 or more, about half length of forearm..... *Laephotis wintoni*
 b Ears under 18, much less than half length of forearm (genus *Eptesicus*)..... 137
- 111 a Ears very large, ore than half length of forearm, separate; pelage almost white *Otonycteris hemprichi*
 African Chiroptera name *Otonycteris hemprichii*
 b Ear not enlarged; pelage brownish..... 112
- 112 a Size larger, forearm not less than 46; 1st and 2nd upper molars with W-pattern obsolescent; tragus long and tapering (genus *Scotophilus*) 159
 b Size smaller, forearm under 46; 1st and 2nd upper molars with normal W-pattern; tragus either sickle-shaped or short and broad (genus *Nycticeius*) 124
- 113 a Size larger, forearm above 52..... 114
 b Size smaller, forearm 52 or less..... 115
- 114 a Wing and interfemoral membranes not parti-coloured..... *Myotis (Myotis) blythii*
 African Chiroptera name *Myotis blythii*
 b Wing, interfemoral membranes and forearm conspicuously parti-coloured (black and red) *Myotis (Chrysopteron) welwitschii*
 African Chiroptera name *Myotis welwitschii*
- 115 a Wings with glands; first two upper premolars greatly reduced and closely crowded together laterally (subgenus *Cistugo*)..... 118
 b Wings without glands; first two upper premolars not greatly reduced, not crowded together laterally 116
- 116 a Feet enlarged, more than half length of tibia *Myotis (Leuconoe) capaccinii*
 African Chiroptera name *Myotis capaccinii*
 b Feet not enlarged, not more than half length of tibia 117
- 117 a Ears not lengthened; calcar usually with lobe; forearm 32 - 52 (subgenus *Selysius*) .. 119
 b Ears lengthened; calcar unlobed; forearm c. 38..... *Myotis (Isotus) nattereri*
 African Chiroptera name *Myotis nattereri*

- 118 a Size smaller, forearm 32.5 - 2.9 *Myotis (Cistugo) seabrai*
 African Chiroptera name [Cistugo seabrae](#)
- b Size larger, forearm 34.5 *Myotis (Cistugo) lesueuri*
 African Chiroptera name [Cistugo lesueuri](#)
- 119 a Size larger, forearm 47 - 52 *Myotis (Selysius) tricolor*
 African Chiroptera name [Myotis tricolor](#)
- b Size smaller, forearm less than 47 120
- 120 a Canines (upper and lower) much reduced, subequal in length to third premolars; tail long, equal to head and body length; braincase sharply elevated above rostrum; forearm 38 - 40 *Myotis (Selysius) scotti*
 African Chiroptera name [Myotis scotti](#)
- b Canines not reduced; tail length and braincase not as above 121
- 121 a Size smaller, forearm about 34 (32 - 35) *Myotis (Selysius) mystacinus*
- b Size medium, forearm 35 - 45 122
- 122 a Posterior border of ear with conspicuous angular emargination; forearm about 40 (37 - 43) *Myotis (Selysius) emarginatus*.
 African Chiroptera name [Myotis emarginatus](#)
- b Ear without conspicuous emargination 123
- 123 a Colour typically orange-rufous above; tragus blunt-tipped, not sharply pointed; forearm 36 - 40 *Myotis (Selysius) bocagei*
 African Chiroptera name [Myotis bocagei](#)
- b Colour brown, not orange-rufous; tragus tapering to sharp point; forearm 36 - 45 *Myotis (Selysius) goudoti*
 African Chiroptera name [Myotis goudoti](#)
- 124 a Skull with rostrum not broadened; palatal emargination narrow; upper cheek teeth four only; anterior lower premolar about half the size (in crown area) of the next premolar; upper canines with rounded anterior surface; tragus halfmoon-shaped; penis not enlarged; forearm 29 - 33 *Nycticeius (Scoteinus) schlieffeni*
 African Chiroptera name [Nycticeinops schlieffenii](#)
- b Skull with rostrum notably broadened, particularly across lachrymals; palatal emargination broader; upper cheek teeth four or five; lower premolars equal in crown area; upper canines with broad flat anterior face; tragus short and broad; penis greatly lengthened; forearm 28 - 38 (subgenus *Scotoecus*) 125
- 125 a Wings dark; four or five upper cheek teeth *Nycticeius (Scotoecus) hirundo*
 African Chiroptera name [Scotoecus hirundo](#)
- b Wings pale; four upper cheek teeth *Nycticeius (Scotoecus) albofuscus*
 African Chiroptera name [Scotoecus albofuscus](#)
- 126 a Size larger; forearm 47-55 *Nyctalus noctula*
- b Size smaller; forearm 43 *Nyctalus verrucosus*
 African Chiroptera name [Nyctalus leisleri](#)
- 127 a Inner upper incisor unicuspid or not very deeply bifid; ventral surface brown or grey (subgenus *Pipistrellus*) 128
- b Inner upper incisors deeply bifid; ventral surface pure white .. *Pipistrellus (Scotozous) rueppelli*
 African Chiroptera name [Pipistrellus rueppellii](#)
- 128 a Tragus hatchet-shaped (with sharp angle on posterior border) *Pipistrellus (Pipistrellus) nanus*
 African Chiroptera name [Pipistrellus nanus](#)
- b Tragus not hatchet-shaped (no sharp angle on posterior border) 129
- 129 a Tragus with greatest width equal to half length of anterior border *Pipistrellus (Pipistrellus) savii*
 African Chiroptera name [Hypsugo savii](#)
- b Tragus with greatest width much less than half length of anterior border 130
- 130 a Pelage unicoloured above and below 131
- b Pelage not unicoloured above and below 132
- 131 a Skull very broad and flat; forearm 28 *Pipistrellus (Pipistrellus) crassulus*
 African Chiroptera name [Hypsugo crassulus](#)
- b Skull very small, rounded, with short rostrum and high braincase; forearm 24 - 25 *Pipistrellus (Pipistrellus) musciculus*
 African Chiroptera name [Hypsugo musciculus](#)

- 132 a Pelage unicoloured above, bicoloured below 133
 b Pelage bicoloured above and below 134
- 133 a Size small, forearm 25.5 - 31.0, total length of skull 11.6 - 11.8, skull with uninflated supraorbital region *Pipistrellus (Pipistrellus) nanulus*
 African Chiroptera name *Pipistrellus nanulus*
 b Size large, forearm 33.7 - 35.1, total length of skull 14.0 - 14.3, skull with supraorbital region expanded laterally *Pipistrellus (Pipistrellus) eisentrauti*
 African Chiroptera name *Hypsugo eisentrauti*
- 134 a Both upper incisors conical and unicuspid; small upper premolar unusually minute, often hidden by gum *Pipistrellus (Pipistrellus) ariel*
 African Chiroptera name *Hypsugo ariel*
 b Upper incisors not as above; small upper premolar not unusually minute 135
- 135 a Outer upper incisors less than half height of inner incisor; large upper premolar in contact with canine; white border to wing membrane.... *Pipistrellus (Pipistrellus) kuhli*
 African Chiroptera name *Pipistrellus kuhlii*
 b Outer upper incisor more than half height of inner incisor; large upper premolar well separated from canine by small upper premolar . *Pipistrellus (Pipistrellus) pipistrellus*
 African Chiroptera name *Pipistrellus pipistrellus*
- 136 a Forearms, hind legs and tail without horny excrescences on upper surface (subgenus *Eptesicus*) 137
 b Forearm, hind legs and tail sprinkled with horny excrescences on upper surface (subgenus *Rhinopterus*) 148
- 137 a Wing membranes white or translucent 138
 b Wing membranes dark 140
- 138 a Dorsal pelage blackish-brown, in strong contrast to pale wings; forearm under 32 *Eptesicus (Eptesicus) tenuipinnis*
 African Chiroptera name *Neoromicia tenuipinnis*
 b Dorsal pelage pale to medium brown, not in strong contrast to pale wings; forearm over 32 139
- 139 a Pelage buffy-brown above, dirty white below; forearm 34 - 38; inner upper incisors with basal cusp *Eptesicus (Eptesicus) rendalli*
 African Chiroptera name *Neoromicia rendalli*
 b Pelage nearer reddish-brown above, paler brown below; forearm c. 33; inner upper incisors without accessory cusp *Eptesicus (Eptesicus) brunneus*
 African Chiroptera name *Neoromicia brunneus*
- 140 a Size larger, forearm more than 40 141
 b Size smaller, forearm less than 40 145
- 141 a Inner upper incisors unicuspid; colour dark brown; forearm 46 - 53 *Eptesicus (Eptesicus) hottentotus*
 African Chiroptera name *Eptesicus hottentotus*
 b Inner upper incisors bicuspid 142
- 142 a Tragus broad and blunt; forearm 46 - 51 *Eptesicus (Eptesicus) platypus*
 African Chiroptera name *Eptesicus platypus*
 b Tragus narrow 143
- 143 a Size larger, forearm 49 - 53 *Eptesicus (Eptesicus) serotinus*
 African Chiroptera name *Eptesicus serotinus*
 b Size smaller, forearm 40 - 46 144
- 144 a Forearm 46; colour above pale brown, below greyish brown *Eptesicus (Eptesicus) loveni*
 African Chiroptera name *Myotis tricolor*
 b Forearm 40 - 43; colour above pale buffy, below white .. *Eptesicus (Eptesicus) bottae*
 African Chiroptera name *Eptesicus bottae*
- 145 a Forearm 34.5 - 38 *Eptesicus (Eptesicus) melckorum*
 African Chiroptera name *Neoromicia melckorum*
 b Forearm 35 or less 146
- 146 a Cranial portion of skull elevated above rostrum *Eptesicus (Eptesicus) zuluensis*
 African Chiroptera name *Neoromicia zuluensis*
 b Cranial portion of skull not elevated above rostrum 147
- 147 a Size smallest, forearm 26 - 29 *Eptesicus (Eptesicus) pusillus*
 b Size medium, forearm 30 - 32; skull lacking posterior occipital "helmet" *Eptesicus*

- (*Eptesicus*) *somalicus*
 African Chiroptera name *Neoromicia somalicus*
 c Size larger, forearm 29 - 35; skull with posterior occipital "helmet" *Eptesicus*
- (*Eptesicus*) *capensis*
 African Chiroptera name *Neoromicia capensis*
 148 a Colour pale fawn above, buff or whitish below 149
 b Colour brown above and below *Eptesicus (Rhinopterus) notius*
 African Chiroptera name *Neoromicia capensis*
 149 a Colour buff below *Eptesicus (Rhinopterus) floweri*
 African Chiroptera name *Eptesicus floweri*
 b Colour whitish below *Eptesicus (Rhinopterus) lowei*
 African Chiroptera name *Eptesicus floweri*
- 150 a Posterior border of ear with small projecting lobe *Barbastella barbastellus*
 b Posterior border of ear without projecting lobe *Barbastella leucomelas*
- 151 a Wing and tail membranes conspicuously reticulated by pigmentation of veining; no pale flank-stripe 152
 b Wing and tail membranes not reticulated; either translucent or blackish-brown; pale flank-stripe sometimes present 153
- 152 a Dorsal colour pale buff or light tawny, head and neck generally paler; forearm 41 - 45 *Glauconycteris variegata*
 b Dorsal colour, including head and neck, dark brown; forearm 46 *Glauconycteris machadoi*
- 153 a Wing and tail membranes pale, translucent; dorsal colour clay-buff; pale cream flank-stripe usually present; forearm 41 - 43 *Glauconycteris argentata*
 b Wing and tail membranes blackish brown 154
- 154 a Body colour, above and below, black with conspicuous pattern of white stripes and spots; forearm 47 *Glauconycteris superba*
 b Body colour never black and white 155
- 155 a Pale flank-stripe or shoulder-spot or both generally present 156
 b Stripes or spots as above generally absent 158
- 156 a Body colour greyish fawn above and below, shoulder-spot and/or flank-stripe usually present; forearm 36 - 40 *Glauconycteris poensis*
 b Body colour brown above and below 157
- 157 a Shoulder-spot only; body colour hair brown; forearm 35 - 40 *Glauconycteris humeralis*
 b Shoulder-spot and/or flank-stripe; body colour seal brown; forearm 41 *Glauconycteris alboguttatus*
 African Chiroptera name *Glauconycteris alboguttata*
- 158 a Colour uniformly dark brown above and below; ears short, rounded; forearm 39 *Glauconycteris beatrix*
 b Colour as above; ears large, subquadrangular; forearm 38 *Glauconycteris egeria*
- 159 a Size very large, forearm 75 - 80; total skull length 30 or more *Scotophilus gigas*
 African Chiroptera name *Scotophilus nigrita*
 b Size smaller, forearm 43 - 65 160
- 160 a Forearm 50 - 65; skull 20 - 23 *Scotophilus nigrita*
 (This should be *Scotophilus dinganii*. See Robbins (1978))
 African Chiroptera name *Scotophilus dinganii*
 b Forearm 43 - 50; skull 16 - 19 *Scotophilus leucogaster*
- 161 a Interfemoral membrane with posterior edge lined with comb-like fringe of stiff hairs... 162
 b Interfemoral membrane without comb-like fringe, carrying only scattered hairs, if any 165
- 162 a Size large, forearm 34 - 39; skull 15 or more; colour above bright reddish-chestnut, below either whitish or buffy, never brown *Kerivoula argentata*
 b Size smaller, forearm 27 - 36; skull 13.5 or less; colour brownish or greyish-brown above and below 163
- 163 a Forearm 27 - 31; frosting or grizzling of dorsal pelage slight *Kerivoula muscilla*
 African Chiroptera name *Kerivoula lanosa*
 b Forearm 30 - 36; frosting or grizzling of dorsal pelage conspicuous 164
- 164 a Rostrum longer, C-M³ greater than M³-M³; forearm 30 - 32 ... *Kerivoula harrisoni*
 African Chiroptera name *Kerivoula lanosa*

- 165 b Rostrum shorter, C-M³ less than M³-M³ ; forearm 32 - 36 *Kerivoula lanosa*
 a Forearm 32 - 34; dorsal pelage grizzled..... 166
 b Forearm 27 - 29; dorsal pelage not grizzled (so far as known)..... 167
- 166 a Outer lower incisors unicuspid; upper incisors long *Kerivoula smithi*
 African Chiroptera name *Kerivoula smithii*
 b Outer lower incisors trilobed; upper incisors short..... *Kerivoula cuprosa*
- 167 a Fur uniformly light brown above and below; inner upper incisors clearly unicuspid
 *Kerivoula phalaena*
 b Fur dark brown basally, with tips greyish brown; inner upper incisors with distinct outer
 cusp *Kerivoula africana*
- 168 a Size very small, forearm less than 40 (35 - 39); condylobasal length of skull usually
 less than 13 *Miniopterus minor*
 b Size larger, forearm more than 40 (42 - 50); skull length approximately 14 - 16 .. 169
- 169 a Size largest, forearm 45 - 50; skull length 16 or more *Miniopterus inflatus*
 b Size medium, forearm c. 42 - 47; skull length c. 14 - 15..... 170
- 170 a Forearm 42 - 44; skull length c. 14..... *Miniopterus fraterculus*
 b Forearm c. 42 - 47; skull length c. 15..... *Miniopterus schreibersi*
 African Chiroptera name *Miniopterus schreibersii*
- 171 a Prominent vertical projection on zygoma; ears very large, 38 - 40, conjoined on
 extended snout; size very large, forearm 62 - 73; conspicuous bicolored dorsal pelage
 pattern, with pale collar separating dark anterior and posterior regions of body
 *Otomops martiensseni*
 b Not combining the above characters..... 172
- 172 a Skull conspicuously flattened, greatest depth of braincase not more than one-third of
 greatest width 173
 b Skull not conspicuously flattened 174
- 173 a Upper cheek teeth 4 or 5 (1st upper premolar either greatly reduced or absent); well-
 developed gular sac; wart-like granulations on forearm; ears widely spaced; forearm
 30 - 36 *Platymops setiger*
 b Upper cheek teeth 5 (1st upper premolar well-developed); no well-developed gular
 sac; no wart-like granulations on forearm; ears not widely spaced; forearm 36 - 42
 *Sauromys petrophilus*
- 174 a Ears widely separated; lower incisors 1-1, with concave crowns lengthened antero-
 posteriorly; upper cheek teeth 4; M³ much reduced; no palatal emargination; upper
 incisors in contact; ears and wing membranes translucent or whitish; underside of
 body entirely white (genus *Myopterus*)..... 176
 b Ears not widely separated, sometimes conjoined, never translucent 175
- 175 a Lower incisors 1-1; upper cheek teeth 5; canines greatly enlarged, particularly by
 basal expansion of cingula; lower canines meeting centrally above the minute and
 functionless lower incisors; ears separate; forearm under 30 .. *Xiphonycteris spurrelli*
 African Chiroptera name *Mops (Xiphonycteris) spurrelli*
 b Lower incisors 2-2 or 3-3; upper cheek teeth 4 or 5; canines not enlarged; ears
 separate or conjoined (in that case often with post-aural tufts or crests in adult males);
 forearm up to 66 and not less than 30, except in *Tadarida (Mops) nanulus* (genus
Tadarida) 178
- 176 a Size small, forearm 33 - 37; total skull length 17 - 19; pelage dark brown above
 *Myopterus whitleyi*
 b Size, larger, forearm more than 40..... 177
- 177 a Forearm 51 - 56; total skull length 24 - 25.7; dorsal pattern slaty-grey with two
 contrasting lateral bands of dirty white *Myopterus albatrus*
 African Chiroptera name *Myopterus daubentonii*
 b Forearm ? 44; total skull length 22; dorsal pelage brown *Myopterus daubentonii*
- 178 a Only 4 upper post-canine cheek teeth; M³ not reduced; upper incisors widely
 separated by large palatal emargination; lower incisors 3-3; ears separate; size small,
 forearm c. 38 (subgenus *Mormopterus*) 181
 b 5 upper post-canine cheek teeth (the small premolar very reduced, sometimes absent
 in *T. (Mops) condylura*, but in that case with M³ reduced, ears conjoined, palatal
 emargination rudimentary or absent, size large, forearm 43 - 49); lower incisors
 normally 2-2, rarely 3-3; ears conjoined or separate; forearm 27 - 66..... 179
- 179 a M³ reduced, cusps rarely more than V pattern; palatal emargination small or absent;

- ears generally conjoined, sometimes with post-aural tuft; size small to large, forearm 27 - 66 (subgenus *Mops*) 182
- 180 b M³ not reduced, cusps forming N pattern..... 180
- a Palatal emargination absent or rudimentary; ears conjoined, often with post-aural tuft, which is sometimes well developed; size medium, forearm 35 - 52 (subgenus *Chaerephon*)..... 190
- b Palatal emargination well-developed; ears generally separate; size medium to large, forearm 45 - 66 (subgenus *Tadarida*)..... 197
- 181 a Ears with anterior margin slightly emarginated below pointed tip; colour uniformly dark brown above and below; total skull length 14 - 15..... *Tadarida (Mormopterus) acetabulosus*
African Chiroptera name *Mormopterus acetabulosus*
- b Ears without emargination, tips broadly rounded; colour above dark brown but with pale bases, underside dirty white over part of throat and ventral area; total skull length 16 - 17 *Tadarida (Mormopterus) jugularis*
African Chiroptera name *Mormopterus jugularis*
- 182 a Size smallest, forearm 31 or less *Tadarida (Mops) nanula*
African Chiroptera name *Mops (Xiphonycteris) nanulus*
- b Size larger, forearm 35 or more 183
- 183 a Size largest, forearm 58 - 66; skull length 26 - 28 *Tadarida (Mops) midas*
African Chiroptera name *Mops (Mops) midas*
- b Size medium, forearm 35 - 58..... 184
- 184 a Forearm over 50 185
- b Forearm under 50 186
- 185 a Ears joined at base; forearm 52 - 57; skull 25 *Tadarida (Mops) congica*
African Chiroptera name *Mops (Mops) congicus*
- b Ears separated at base; forearm 52; skull c.23 *Tadarida (Mops) niangarae*
African Chiroptera name *Mops (Mops) niangarae*
- 186 a Male with scent gland at base of penis; forearm 42 - 44 *Tadarida (Mops) demonstrator*
African Chiroptera name *Mops (Mops) demonstrator*
- b Male without such gland; forearm 35 - 50 187
- 187 a Forearm 44 - 50 188
- b Forearm 35 - 41 189
- 188 a Crown darker than back; underside usually mainly white; skull with sagittal crest low, when present; 3rd commissure of M³ obsolete; deep basisphenoid pits; forearm 44 - 47..... *Tadarida (Mops) niveiventer*
African Chiroptera name *Mops (Mops) niveiventer*
- b Crown not darker than back; little or no white on underside; skull with well-developed sagittal crest; 3rd commissure of M³ present, though reduced; shallow basisphenoid pits; forearm 45 - 50..... *Tadarida (Mops) condylura*
African Chiroptera name *Mops (Mops) condylurus*
- 189 a Underside brownish, with blackish flanks; forearm 38 - 41. *Tadarida (Mops) thersites*
African Chiroptera name *Mops (Xiphonycteris) thersites*
- b Underside whitish, flanks not blackish; forearm 35 - 38 *Tadarida (Mops) leonis*
African Chiroptera name *Mops (Xiphonycteris) brachypterus*
- 190 a Distinct separate lobe or lappet projecting between inner bases of ears..... *Tadarida (Chaerephon) major*
African Chiroptera name *Chaerephon major*
- b Without such lobe or lappet..... 191
- 191 a Size larger, forearm 42 - 52 192
- b Size smaller, forearm 34 - 42 196
- 192 a Paired caudal glands opening as slits on either side of tail root below; forearm 46 - 47 *Tadarida (Chaerephon) cistura*
African Chiroptera name *Chaerephon bemmellini*
- b Without such glands..... 193
- 193 a Conspicuous white lateral band below, along flanks at junction with membrane, contrasting with very dark brown colour above and below; wings dark or pale; forearm 44 - 50 *Tadarida (Chaerephon) nigeriae*
African Chiroptera name *Chaerephon nigeriae*
- b No white lateral band 194

- 194 a Forearm 42 - 46; colour russet brown *Tadarida (Chaerephon) russata*
African Chiroptera name *Chaerephon russatus*
- b Forearm 46 - 52 195
- 195 a Colour umber-brown with variable pattern of white spots or short stripes arranged laterally on crown and sometimes also on shoulders and flanks; wings dark; skull with rostrum not elongated; forearm 46 - 51 *Tadarida (Chaerephon) bivittata*
African Chiroptera name *Chaerephon bivittatus*
- b Colour uniformly russet brown without white spots or stripes; wings dark; skull with elongated narrow rostrum; forearm 52 *Tadarida (Chaerephon) aloysiisabaudiae*
African Chiroptera name *Chaerephon aloysiisabaudiae*
- 196 a Males with long (13 - 14mm) bicolored post-aural crest (dark basally, pale apically); forearm 34 - 39; underside white or whitish-tipped..... *Tadarida (Chaerephon) chapini*
African Chiroptera name *Chaerephon chapini*
- b Males with short (10 m or less) unicolored post-aural crest; wings dark or light; colour below variable, with or without white on the median area; forearm 37 - 42 ... *Tadarida (Chaerephon) pumila*
African Chiroptera name *Chaerephon pumilus*
- 197 a Lower incisors 6; skull very narrow; lower canines widely separated at base; size large, forearm 54 - 64 *Tadarida (Tadarida) teniotis*
African Chiroptera name *Tadarida teniotis*
- b Lower incisors 4; skull generally broad, rarely narrow; lower canines almost touching at base or widely separated; size medium to large, forearm 45 - 66 198
- 198 a Size large, forearm 57 - 66..... 199
- b Size medium, forearm 45 - 53..... 201
- 199 a Ears very large, united at base very close to nostrils, projecting well beyond muzzle when laid forward; underside all white except for narrow brown flank-stripe; skull, particularly rostrum, very narrow; basisphenoid pits shallow; lower canines almost touching at base; forearm 63 *Tadarida (Tadarida) lobata*
African Chiroptera name *Tadarida lobata*
- b Ears smaller, not united at inner margin, well back from nostrils, barely projecting beyond muzzle when laid forward; underside without or with restricted white area; skull not narrowed in rostral region; basisphenoid pits deeper, sharply defined; forearm 57 - 66 200
- 200 a Skull very broad and heavy, particularly in rostral region, total length 23.5 - 25.7; deep, sharply defined basisphenoid pits; lower canines almost touching at base; underside mostly brownish, sometimes with median white area; forearm 63 - 66 *Tadarida (Tadarida) africana*
African Chiroptera name *Tadarida ventralis*
- b Skull much less broad in rostral region, total length 22 - 22.9; basisphenoid pits well-defined; lower canines almost touching at base; underside with variable white band on mid-ventral line; forearm 57 - 62 *Tadarida (Tadarida) fulminans*
African Chiroptera name *Tadarida fulminans*
- 201 a Size medium, forearm 44 - 53; total skull length 19 - 21; braincase flat; lower canines widely separated at base; no blackish area on chin and throat ... *Tadarida (Tadarida) aegyptiaca*
African Chiroptera name *Tadarida aegyptiaca*
- b Size smaller, forearm 47.5 or less; total skull length 18 - 20; braincase elevated; lower canines almost touching at base; chin and throat generally blackish *Tadarida (Tadarida) ansorgei*
African Chiroptera name *Chaerephon ansorgei*

Appendix 5i: Hill (1974). A review of *Scotoecus* Thomas, 1901 (Chiroptera: Vespertilionidae)

- 1 a Tragus long, relatively narrow; zygomata not cartilaginous; pm/2 reduced, its crown area one third to one half that of pm/4; this tooth not compressed in toothrow. *Scotoecus pallidus*
- b Tragus short, relatively wide ; zygomata cartilaginous ; pm/2 unreduced, its crown area subequal to that of pm/4; this tooth compressed in toothrow. 2
- 2 a Tragus more or less parallel-margined, the upper part of its anterior margin not prolonged anteriorly; outer part of wing membrane pale; ventral surface of body brown; braincase slightly flattened. *Scotoecus albofuscus*
- b Tragus slightly hatchet-shaped, the upper part of its anterior margin projected forward; outer part of wing membrane dark; ventral surface of body greyish, at most tinged with brown; braincase slightly elevated. 3
- 3 a Smaller, length of forearm generally less than 33.0, condylobasal length 13.2 or less, c-m³ 5.1 or less..... *Scotoecus hirundo*
- b Larger, length of forearm generally exceeding 32.0, condylobasal length 13.5 or more, c-m³ 5.2 or more..... *Scotoecus hindei*

Appendix 5j: Fenton (1975). Observations on the biology of some Rhodesian bats, including a key to the Chiroptera of Rhodesia.

1	a	Claw present on second finger; FA 66 - 130 (PTEROPODIDAE).....	7
	b	No claw on second finger; FA usually less than 66	2
2	a	Tail fully enclosed by interfemoral membrane	4
	b	Tail not fully enclosed by interfemoral membrane	3
3	a	Tail protruding through the interfemoral membrane; FA 58 - 67 (EMBALLONURIDAE)	12
	b	Tail extending beyond the end of the interfemoral membrane; FA 35 - 73 (MOLOSSIDAE).....	49
4	a	Tail terminating in a T-shaped cartilage; ears large; FA 37 - 66 (NYCTERIDAE)...	13
	b	Tail not terminating in a T-shaped cartilage	5
5	a	Nose-leaf ornamentation present	6
	b	Nose-leaves absent; FA 25 - 65 (VESPERTILIONIDAE)	29
6	a	Nose-leaves arranged as in Fig. 5; FA 37 - 67 (RHINOLOPHIDAE).....	17
	b	Nose-leaves not arranged as in Fig. 5; FA 31 - 115 (HIPPOSIDERIDAE)	26
7	a	FA greater than 110; narrow band of fur between wings on dorsum; FA 110 - 130 <i>Eidolon helvum</i>	
	b	FA less than 110	8
8	a	Ears with basal tufts of white fur	9
	b	Ears without basal tufts of white fur.....	11
9	a	One post-dental palatal ridge; FA 72 - 89	<i>Epomophorus wahlbergi</i>
	b	Two post-dental palatal ridges	10
10	a	FA males 87 - 93; females 81 - 86	<i>Epomophorus gambianus</i>
	b	FA males 81 - 85; females 79 - 80	<i>Epomophorus crypturus</i>
		African Chiroptera name	<i>Epomophorus gambianus crypturus</i>
11	a	Wing membranes insert on first toe; hair short and slick; FA 90 - 105.....	<i>Rousettus aegyptiacus</i>
	b	Wing membranes insert on second toe; hair longer and coarser; FA 66 - 83	<i>Rousettus angolensis</i>
		African Chiroptera name	<i>Lissonycteris angolensis</i>
12	a	Fur of dorsum grizzled greyish; venter white; FA 58 - 64	<i>Taphozous mauritanus</i>
	b	Fur of dorsum bicoloured, not grizzled; FA 60 - 67	<i>Taphozous perforatus</i>
13	a	FA over 55; restricted to closed forest; upper incisors trifold; E 28 - 35; FA 57 - 66	<i>Nycteris grandis</i>
	b	FA less than 55	14
14	a	Upper incisors trifold; E 18 - 25; FA 36 - 45	<i>Nycteris hispida</i>
	b	Upper incisors bifid	15
15	a	Tragus semilunate (Fig. 6A).....	16
	b	Tragus pyriform (Fig. 6B); E 28 - 37; FA 42 - 52	<i>Nycteris thebaica</i>
16	a	FA 37 - 42; E 29 - 34; colour greyish.....	<i>Nycteris woodi</i>
	b	FA 45 - 50; E 28 - 34; colour brownish.....	<i>Nycteris macrotis</i>
17	a	Face and/or lateral margins of sella (Fig. 5) with long hairs; connecting process low and rounded; greatest breadth of horseshoe usually over 9	18
	b	Face and/or lateral margins of sella without hairs; greatest breadth of horseshoe usually less than 9	19
18	a	FA 62 - 67	<i>Rhinolophus hildebrandti</i>
		African Chiroptera name	<i>Rhinolophus hildebrandtii</i>
	b	FA 50 - 60	<i>Rhinolophus fumigatus</i>
19	a	Anterior upper premolar external to tooth row; connecting process bluntly pointed; upper canine and p ⁴ in contact	20
	b	Anterior upper premolar in tooth row; upper canine and p ⁴ not in contact.....	21
20	a	FA 50 - 57	<i>Rhinolophus clivosus</i>
	b	FA 45 - 50	<i>Rhinolophus darlingi</i>
21	a	First phalanx of fourth digit shortened relative to metacarpal; (phalanx less than 8); connecting process to erect point (Fig. 7D); FA 40 - 48	<i>Rhinolophus landeri</i>
	b	First phalanx of fourth digit not shortened (over 8).....	22
22	a	Connecting process rises to high, narrow horn (Fig. 7E); FA 44 - 48	<i>Rhinolophus blasii</i>
	b	Connecting process low with bluntly pointed tip	23

- 23 a FA 47 - 51 *Rhinolophus capensis*
 b FA less than 45 24
- 24 a Ears relatively long; sella broad, venter white; FA 40 - 46; connecting process as in Fig. 7F *Rhinolophus simulator*
 b Ears relatively short; sella narrow 25
- 25 a Front edge of connecting process convex; FA 40 - 46 *Rhinolophus swinnyi*
 b Front edge of connecting process concave (Fig. 7G); FA 37 - 42 .. *Rhinolophus denti*
- 26 a FA 31 - 35; nose-leaf small and trident *Cloeotis percivali*
 b FA over 40; nose-leaf not trident 27
- 27 a FA over 75 (79 - 115) *Hipposideros commersoni*
 b FA 40 - 55 28
- 28 a FA less than 48; greyish to pale orange fur; main posterior nasal compartment narrow with wide lateral inflations *Hipposideros caffer*
 b FA over 48; brownish to rufous; main posterior nasal compartment wide with narrow lateral inflations *Hipposideros ruber*
- 29 a Second phalanx of third digit equal to three times the first phalanx; FA 42 - 47 (Miniopterinae) *Miniopterus schreibersi*
 African Chiroptera name *Miniopterus schreibersi*
 b Second phalanx of third digit less than three times the first phalanx 30
- 30 a Ears funnel-shaped with deep emargination below tip; tragus long and narrow with sharply pointed tip; FA 30 - 39 (Kerivoulinae) 31
 b Not as above (Vespertilioninae) 32
- 31 a FA 34 - 39; venter whitish or buffy *Kerivoula argentata*
 b FA 30 - 32; venter brown *Kerivoula harrisoni*
 African Chiroptera name *Kerivoula lanosa*
- 32 a Elongated muzzle; p 3-3/3-3 M 3-3/3-3 ; fur short and standing away from body; calcar long 33
 b Muzzle short (less than three premolars) 35
- 33 a FA 56 - 57; membranes and FA particoloured (black and red) *Myotis welwitschii*
 b Fa less than 56 mm 34
- 34 a FA 47 - 52; membranes not particoloured *Myotis tricolor*
 b FA 36 - 40; membranes not particoloured; orange-rufous dorsum *Myotis bocagei*
 African Chiroptera name *Myotis bocagii*
- 35 a Upper incisors 2-2 36
 b Upper incisors 1-1 45
- 36 a Upper premolars 2-2; tragus short and blunt 37
 b Upper premolars 1-1 40
- 37 a Venter pure white; fur extending slightly on to wings; fur of dorsum bicolor (dark base, light tips); membranes pale; FA 34 *Pipistrellus rueppelli*
 African Chiroptera name *Pipistrellus rueppellii*
 b Fur on venter dark or light grey; membranes dark 38
- 38 a Tragus hatchet-shaped (Fig. 8A); fur on dorsum bicoloured; FA 25 - 32... *Pipistrellus nanus*
 b Tragus not hatchet-shaped (Fig. 8B) 39
- 39 a Pelage bicoloured above and below; outer upper incisor less than one half inner upper incisor; large upper premolar in contact with canine; FA 30 - 33 *Pipistrellus kuhlii*
 b Outer and inner upper incisors equal in size; colour more rufous; white border on posterior part of wing membranes between feet and fifth digit well marked; FA 27 - 30 *Pipistrellus rusticus*
- 40 a Second phalanx of third digit greater than first; lower lip with lobe at posterior angle 41
 b Second phalanx of third digit less than first; lower lip without lobe 42
- 41 a Wing and interfemoral membrane variegated; fur on venter white and unicoloured; FA 40 - 45 *Glauconycteris variegata*
 b Wing and interfemoral membrane not variegated; fur black at base, narrow white middle band, sandy tips; FA 39 - 44 *Glauconycteris argentata**
 African Chiroptera name *Glauconycteris argentata*
- 42 a Ears over 18 and ca. 50% of FA; FA 36 - 38 *Laephotis angolensis*
 b Ears less than 18; 30-40% of FA 43
- 43 a FA 46 - 53; membranes dark; inner upper incisor unicuspid *Eptesicus hottentotus*
 b FA less than 45 44

- 44 a Membranes light or translucent; buffy brown dorsum; dirty white venter; FA 34 - 48
..... *Eptesicus rendalli**
African Chiroptera name *Neoromicia rendalli*
- b Membranes dark; FA 29 - 36 *Eptesicus capensis*
African Chiroptera name *Neoromicia capensis*
- 45 a FA 40 - 80; tragus long and tapering..... 46
- b FA less than 40; tragus short 48
- 46 a FA over 70 (70 - 80); venter white to orange brown *Scotophilus gigas*
African Chiroptera name *Scotophilus nigrita*
- b Fa less than 70 mm 47
- 47 a FA 50 - 65; venter yellowish..... *Scotophilus nigrita*
(This should be *Scotophilus dinganii*. See Robbins (1978))
African Chiroptera name *Scotophilus dinganii*
- b FA 43 - 50; venter beige *Scotophilus leucogaster*
- 48 a Tragus short and rounded; upper canine grooved on anterior face; cheek teeth 2-3/2-2
; penis very elongate; tragus as in Fig. 8c; FA 31 - 33 *Nycticeius hirundo*
African Chiroptera name *Scotoecus hirundo*
- b Tragus as in Fig. 8D; upper canine not grooved on anterior face; cheek teeth not as in
preceding; penis not very elongated; FA 30 - 33 *Nycticeius schlieffeni*
African Chiroptera name *Nycticeinops schlieffenii*
- 49 a Ears very large (38 - 40), joined on projecting snout; collar of pale fur separating
darker anterior and posterior parts; FA 62 - 73 *Otomops martiensseni*
- b Not combining above characteristics..... 50
- 50 a FA over 55 52
- b FA less than 55 51
- 51 a FA 44 - 55 55
- b FA 35 - 44 60
- 52 a Ears joined at base; FA 58 - 66..... *Tadarida midas*
African Chiroptera name *Mops (Mops) midas*
- b Ears separate at base 53
- 53 a Venter white; wings translucent; ears large (29 - 30); white spot on mid-dorsum in
adults; FA 57 - 60..... *Tadarida lobata*
- b Venter not white; wings not translucent..... 54
- 54 a FA 60 - 67; brown and red forms *Tadarida africana**
African Chiroptera name *Tadarida ventralis*
- b FA 57 - 60; brown and red forms *Tadarida fulminans*
- 55 a Venter dark or perhaps tinged with grey 56
- b Venter light-coloured 59
- 56 a Conspicuous ridge of fur across dorsal surface of hips; variable pattern of white flecks
or short stripes laterally on crown and perhaps shoulders and flanks; flanks quite bare;
FA 44 - 49 *Tadarida bivittata*
African Chiroptera name *Chaerephon bivittatus*
- b Conspicuous ridge of fur absent; no white flecks 57
- 57 a Ears separate; no white stripe at ventral contact of wings and body 58
- b Ears joined at bases; white stripes at ventral contact of wings and body; fur on body
black; wings translucent; FA 46 - 50 *Tadarida nigeriae*
African Chiroptera name *Chaerephon nigeriae*
- 58 a Chin and throat blackish; lower canines almost touching at bases; FA 44 - 47 *Tadarida*
ansorgei
African Chiroptera name *Chaerephon ansorgei*
- b Chin and throat not blackish; lower canines well separated at bases; FA 44 - 53
..... *Tadarida aegyptiaca*
- 59 a Crown darker than back; underside usually mainly white; E 20 - 25; FA 44 - 47
..... *Tadarida niveiventer*
African Chiroptera name *Mops (Mops) niveiventer*
- b Crown not darker than back; little or no white on venter; E 28 - 30; FA 45 - 50 *Tadarida*
condylura
African Chiroptera name *Mops (Mops) condylurus*
- 60 a Ears joined on top of head; variable pattern of white on venter including lateral stripes
and central area of body; wings translucent; FA 37 - 42 *Tadarida pumila*

-
- African Chiroptera name *Chaerephon pumilus*
- b Ears not joined on top of head; no white on venter; wings not translucent; FA 36 - 42
..... *Sauromys petrophilus*

Appendix 5k: Hill (1977). A review of the Rhinopomatidae (Mammalia: Chiroptera).

- 1
 - a Larger, length of forearm 57-5-75 mm, condylobasal length 17-3-20-6 mm; tail usually shorter than forearm; prominent sagittal crest; supraorbital ridges high, knife-like, their junction enclosing a recess or pocket, angled, the frontal region more or less pentagonal in outline, flat, rostrum with narial swellings not especially pronounced. *Rhinopoma microphyllum*
 - b Smaller, length of forearm 46-63-5 mm, condylobasal length 14-0-17-8 mm; tail usually longer than forearm; low sagittal crest; supraorbital ridges low, no prominent recess or pocket at their junction, straight, the frontal region more or less triangular, slightly depressed centrally; rostrum with prominent sub-globular narial swellings. . 2
- 2
 - a Muzzle with well-developed transverse dermal ridge; uppermost margins of rostrum slightly divergent anteriorly; narial inflations more or less globose, not projecting laterally much beyond anteriormost point of nasals, foremost extension of swelling in profile above the rear of c¹..... *Rhinopoma hardwickei*
African Chiroptera name *Rhinopoma hardwickii*
 - b Dermal ridge on muzzle low; uppermost margins of rostrum more nearly parallel; narial inflations slightly angular, projecting considerably beyond anteriormost point of nasals, foremost extension of swelling in profile above front of c¹. *Rhinopoma muscatellum*

Appendix 5I: Jones (1977a). *Plecotus rafinesquii*

- 1 a Supraorbital region sharply ridged (*Plecotus*) 2
 b Supraorbital region not ridged: temporal ridges normally coalesced to form a sagittal crest (*Corynorhinus*) 3
- 2 a Width of tragus less than 5.4 mm; length of upper canine (height of crown) less than 1.7 mm; dorsal pelage buff or gray; bases of hairs on venter dark brown or buff *Plecotus auritus*
 b Width of tragus greater than 5.4 mm; length of upper canine (height of crown) greater than 1.7 mm; dorsal pelage usually gray; bases of hairs on venter dark black *Plecotus austriacus*
- 3 a Tips of ventral hairs white or whitish, sharply contrasted with blackish bases; median postpalatan process triangular in shape, with a broad base; rostrum weak and much depressed; I1 with prominent secondary cusp; anterointernal cusp usually present on cingulum of P4 *Plecotus rafinesquii*
 b Tips of ventral hairs brownish of buff, often not sharply contrasted with slate, gray, or brownish bass; median post-palatal process usually styliform, with a narrow base (ocassionally triangular); rostrum strong and not depressed, or variable; I1 with or without secondary cusp; anterointernal cusp absent or variable on cingulum of P4. 4
- 4 a Coloration of dorsum dark sooty-brown, with scant contrast between bases and tips of hairs; greatest length of skull usually less than 15.7 mm (females) or 15.5 mm (males); maxillary tooththrow usually less than 4.9 mm; I1 usually with secondary cusp; tragus usually less than 13 mm long; interfemoral cross ribs usually less than nine *Plecotus mexicanus*
 b Coloration of dorsum sometimes yellow-bron, with sharp contrast between bases an tips of hairs; greatest length of skull usually more than 15.7 mm (females), or 15.5 mm (males); maxillary tooththrow usually more than 4.9 mm; I1 usually simple; tragus usually more than 13 mm long; interfemoral cross ribs usually more than nine *Plecotus townsendii*

Appendix 5m: El-Rayah (1981). A New species of bat of the genus *Tadarida* (Family *Molossidae*) from West Africa.

- 1 a Forearm less than 32 mm; M3 without 3rd commissure..... 2
 b Forearm more than 32 mm; M3 with short but distinct third commissure 3
- 2 a Canines with enlarged cingula; upper incisors not projecting in front of anterior face of canine cingula; skull greatest length 14.0 - 16.8 *Tadarida spurrelli*
 African Chiroptera name *Mops (Xiphonycteris) spurrelli*
 b Canines without enlarged cingula; upper incisors projecting in front of anterior face of canine cingula; skull greatest length 15.0 – 17.5..... *Tadarida nanula*
 African Chiroptera name *Mops (Xiphonycteris) nanulus*
- 3 a Forearm less than 35 mm; skull length 15.8 - 17.5 *Tadarida petersoni*
 African Chiroptera name *Mops (Xiphonycteris) petersoni*
 b Forearm 35 mm or more; skull length 17.2 - 20.6 4
- 4 a Wing insertion high on sides of back with dorsal pelage restricted to top of back and not extending over rump to base of tail; ventral pelage dark with darker lateral bands; basisphenoid pits deep and rounded laterally with septum between nearly parallel.
 *Tadarida thersites*
 African Chiroptera name *Mops (Xiphonycteris) thersites*
 b Wing insertion lower on sides of body; dorsal pelage not restricted to back and extends to sides of body and over rump to base of tail; ventral pelage from white to orange buff without dark lateral bands; basisphenoid pits shallow and long oval shape with septum between narrowing anteriorly. *Tadarida brachyptera*
 African Chiroptera name *Mops (Xiphonycteris) brachypterus*

Appendix 5n: Smithers, R.H.N. (1983). The mammals of the Southern African subregion

1	a	Second digit on forearm terminating in a claw (Fig. V.1), margin of ear forming a complete ring; ear tragus absent; interfemoral membrane greatly reduced, little more than a narrow band along inside margin of hind legs; tail absent or rudimentary (Fig. 45.1): cheek teeth simple, without well-developed cusp pattern (Fig. V.2) (Suborder Megachiroptera).....	2
	b	Second digit without a claw; margin of ear not forming a complete ring; ear tragus generally present (absent in family Rhinolophidae); interfemoral membrane and tail generally well-developed; cheek teeth cuspidate with generally well developed W pattern (suborder Microchiroptera).....	9
2	a	Ears with white basal tufts.....	3
	b	Ears without white basal tufts.....	4
3	a	Six ridges on the palate, not more than two behind the last tooth; these not differentiated from the ridges between the teeth (Fig. 40.1); the back of the palate, behind the teeth, strongly concave at the back (genus <i>Epomophorus</i>).....	5
	b	Five, or 9 to 11 ridges on the palate, at least five behind the last tooth, these differentiated from the ridges between the teeth; the back of the palate, behind the teeth, flattened at the back.....	<i>Epomops dobsoni</i>
		African Chiroptera name	<i>Epomops dobsonii</i>
4	a	Size larger, length of forearm over 100	<i>Eidolon helvum</i>
	b	Size smaller, length of forearm under 100 (genus <i>Rousettus</i>).....	8
5	a	One palatal ridge behind the last tooth (Fig. 40.1.a); length of forearm 77 - 89 (males), 72 - 86 (females).....	<i>Epomophorus wahlbergi</i>
	b	Two palatal ridges behind the last tooth (Fig. 40.1.b).....	6
6	a	Fourth palatal ridge midway between third and fifth (fig. 40.1.b)	7
	b	Fourth palatal ridge much nearer the third than fifth; length of forearm 87 - 91 in males, 82 in females (Fig. 41.1.b).....	<i>Epomophorus angolensis</i>
7	a	Length of forearm 87 - 93 (males), 81 - 86 (females).....	<i>Epomophorus gambianus</i>
	b	Forearm 81 - 85 (males), 79 - 80 (females)	<i>Epomophorus crypturus</i>
		African Chiroptera name	<i>Epomophorus gambianus crypturus</i>
8	a	Wing membranes arise from the first toe; hair short and sleek; cheek teeth heavy; length forearm generally above 89 and up to 96; adult males without collar of bristly hairs on the throat.....	<i>Rousettus aegyptiacus</i>
	b	Wing membranes arise from the second toe; hair longer and coarser; cheek teeth reduced in bulk; length of forearm less than 90; adult males with a distinct collar of bristly hairs on the throat.....	<i>Rousettus angolensis</i>
		African Chiroptera name	<i>Lissonycteris angolensis</i>
9	a	With a distinct tail extending free of the interfemoral membrane	10
	b	Tail almost entirely enclosed within the interfemoral membrane	11
10	a	Free terminal part of tail emerging upwards from near the middle of the interfemoral membrane (Fig. VI.1) (family Emballonuridae).....	14
	b	Free terminal part of tail emerging from the posterior part of the interfemoral membrane and extending well beyond it (Fig. VII.2) (family Molossidae).....	60
11	a	No noseleaves (Fig. VIII.1) (family Vespertilionidae).....	33
	b	Face with noseleaves	12
12	a	Face with a deep central slit (Fig. IX.1) (family Nycteridae)	16
	b	Face without a deep central slit.....	13
13	a	Posterior noseleaf subtriangular with an erect point (Fig. X.1) (family Rhinolophidae)	21
	b	Posterior noseleaf elliptical (Fig. XI.1) (family Hipposideridae).....	30
14	a	Smaller, forearm less than 55; two upper and six lower incisor teeth.....	<i>Coleura afra</i>
	b	Larger, forearm over 57, two upper incisors which may be minute or absent, four lower incisor teeth (genus <i>Taphozous</i>).....	15
15	a	Fur on upper parts grizzled greyish, the tips of the hair whitish, under parts pure white; total length of the skull over 21.5 mm; forearm 60 - 64 mm ...	<i>Taphozous mauritanus</i>
	b	Fur on upper parts unicolour dark brown, the under parts not pure white; total length of the skull less than 21.5 mm; forearm 62 - 67 mm	<i>Taphozous perforatus</i>
16	a	Upper incisor teeth trifid (Fig. 94.1).....	17

- b Upper incisor teeth bifid 18
 17 a Forearm 36 - 45, ear 18 - 25 *Nycteris hispidia*
 b Forearm 57 - 66, ear 28 - 35 *Nycteris grandis*
 18 a Ear tragus semi-lunate, base of its posterior margin not notched (*aethiopica* group) 19
 b Ear tragus pyriform, base of its posterior margin shallowly notched (*thebaica* group).
 20
 19 a General colour greyish; forearm 37 - 42, ear 29 - 34 *Nycteris woodi*
 b General colour brownish; forearm over 43; ear over 21 *Nycteris macrotis*
 20 a Size smaller; forearm 42 - 52, ears 28 - 37; skull less massive; breadth of supraorbital
 flanges about 6.8 *Nycteris thebaica*
 b Size larger; forearm over 50; ears about 22; skull massive, rostrum 20 % heavier than
 in *N. thebaica*, breadth of supraorbital flanges about 9.0 *Nycteris vinsoni*
 21 a Face and/or lateral margins of the sella liberally furnished with long hairs; connecting
 process low, rounded; greatest breadth of horseshoe generally over 9.0 (Fig. X.2) 22
 b Sella naked; connecting process rounded or pointed; greatest breadth of horseshoe
 under 9.0 23
 22 a Forearm 62 - 67 *Rhinolophus hildebrandti*
 African Chiroptera name *Rhinolophus hildebrandtii*
 b Forearm 50 - 60 *Rhinolophus fumigatus*
 23 a Anterior upper premolar, when present, external to toothrow (Fig. X.5); canines and
 fourth upper premolar in contact; connecting process bluntly pointed 24
 b Anterior upper premolar in toothrow (Fig. X.5); canine and fourth upper premolar not in
 contact; connecting process blunt or sharply pointed 25
 24 a Forearm 50 - 57 *Rhinolophus clivosus*
 b Forearm 45 - 50 *Rhinolophus darlingi*
 25 a First phalanx of fourth finger notably shortened in relation to metacarpal length:
 forearm 40 - 48 *Rhinolophus landeri*
 b First phalanx of fourth finger not notably shortened in relation to metacarpal length 26
 26 a Connecting process rises to high and narrow horn *Rhinolophus blasii*
 b Connecting process with low, bluntly pointed tip 27
 27 a Larger, forearm 47 - 51; skull 20.0 or more *Rhinolophus capensis*
 b Smaller, forearm 40 - 46; skull 18.7 or less 28
 28 a Sella broader; ears longer (20 - 22) *Rhinolophus simulator*
 b Sella narrower; ears shorter (18 - 20) 29
 29 a Front edge of connecting process almost concave; lancet with sides almost convex;
 fur lights at base *Rhinolophus denti*
 b Front edge of connecting process convex; lancet with sides concave, tip pointed; fur
 nearly unicoloured *Rhinolophus swinnyi*
 30 a Posterior leaflet on noseleaf simple in outline, elliptical or rounded, not tridentate; ears
 either separate or united by low band; rostrum at least half as long as the braincase;
 small upper premolar present; forearm 40 - 110 (genus *Hipposideros*) 32
 b Posterior leaflet of noseleaf tridentate; ears separate; small upper molar present or
 absent; rostrum sometimes less than half as long as braincase; forearm 30 - 40 .. 31
 31 a Size very small, forearm 31 - 35; ears very low, rounded, rim-like, length 8; noseleaf
 small and inconspicuous; thumbs minute; rostrum less than half length of braincase
 *Cloeotis percivali*
 b Size larger, forearm 50 - 54; ears short, 10 - 14, but pointed; noseleaf conspicuous;
 thumbs normal; rostrum more than half the length of the braincase; upper incisors bifid
 (genus *Triaenops*) *Triaenops persicus*
 32 a Size larger; forearm 90 - 110; ears narrow and pointed *Hipposideros commersoni*
 b Size smaller; forearm 40 - 50; ears broader *Hipposideros caffer*
 33 a Second phalanx of third digit not especially elongated 34
 b Second phalanx of third digit about three times as long as first; braincase high and
 rounded (subfamily MINIOPTERINAE; genus *Miniopterus*) 58
 34 a Ears not funnel-shaped, without deep emargination below tip; ear tragus short and
 broad, or long and narrow, but not sharply pointed; braincase not particularly high and
 rounded (subfamily VESPERTILIONINAE) 35
 b Ears funnel-shaped, with deep emargination below tip; ear tragus long, narrow,
 sharply pointed; braincase high and rounded (subfamily KERIVOULINAE; genus
Kerivoula) 57

- 35 a Six upper, six lower cheek teeth on either side (genus *Myotis*) 42
 b Less than six upper and six lower cheek teeth 36
- 36 a Five upper, five lower cheekteeth; ears not lengthened; two upper incisors on each side; wing with fifth finger not shortened; ears not joined at base (genus *Pipistrellus*) 47
 b Four upper, five lower cheek teeth; ears only exceptionally notably lengthened 37
- 37 a Two upper incisors on each side 38
 b One upper incisor on each side 40
- 38 a Rostrum very short and broad; braincase very high more than two-thirds of condylobasal length; lower lip with lobe at posterior angle; frequently with body pattern of spots and/or stripes, or conspicuous reticulation of wing membranes *Chalinolobus variegatus*
 African Chiroptera name *Glauconycteris variegata*
 b Rostrum not shortened; braincase not elevated; no body or wing pattern 39
- 39 a Ear 18 or more, about half length of forearm (genus *Laephotis*) 46
 b Ears less than 18, much less than half length of forearm (genus *Eptesicus*) 50
- 40 a Size larger, forearm not less than 46 mm; first and second upper molars with W-pattern obsolescent; tragus long and tapering (genus *Scotophilus*) 55
 b Size smaller, forearm less than 46 mm; first and second upper molars with normal W-pattern; tragus either sickle-shaped or short and broad 41
- 41 a Skull with rostrum not broadened; palatal emargination narrow; anterior lower premolar about half the crown area of the next premolar; upper canines with rounded anterior surface; tragus halfmoon-shaped; penis not enlarged; forearm 29 - 33 mm *Nycticeius schlieffenii*
 African Chiroptera name *Nycticeinops schlieffenii*
 b Skull with rostrum notably broadened, particularly across lachrymals; palatal emargination broader; upper cheek teeth four or five; lower premolars equal in crown area; upper canines with broad flat anterior face; tragus short and broad; penis greatly lengthened, nearly a quarter of the length of the head and body; forearm 28 - 38 mm *Scotoecus albofuscus*
- 42 a Size larger, forearm over 52 mm *Myotis welwitschii*
 b Size smaller, forearm 52 or less 43
- 43 a Wings with glands; first two upper premolars greatly reduced and closely crowded together laterally 44
 b Wings without glands; first two upper premolars not greatly reduced, not crowded together laterally (Fig. 72.1) 45
- 44 a Size smaller, forearm 32.5 - 2.9 *Myotis seabrai*
 African Chiroptera name *Cistugo seabrae*
 b Size larger, forearm 34.5 *Myotis lesueuri*
 African Chiroptera name *Cistugo lesueuri*
- 45 a Size larger, forearm 47 - 52 *Myotis tricolor*
 b Size smaller, forearm less than 47 *Myotis bocagei*
 African Chiroptera name *Myotis bocagii*
- 46 a Larger, total length of the skull over 16 mm; upper parts light drab; length of ears 25 mm; ear tragus with a notch near the base of the outside edge (Fig. 78.1.d) *Laephotis namibensis*
 b Smaller, total length of the skull under 15 mm; upper parts buffy-brown; length ears 21 mm; ear tragus without a notch near the base of the outside edge (Fig. 78.1.b) *Laephotis botswanae*
- 47 a Inner upper incisor teeth unicuspid or not very deeply bicuspid (Fig 75.2); the under parts brown or grey (subgenus *Pipistrellus*) 48
 b Inner upper incisors deeply bifid; the under parts pure white. *Pipistrellus* (*Scotozous*) *rueppelli*
 African Chiroptera name *Pipistrellus rueppellii*
- 48 a Second upper incisor teeth much reduced *Pipistrellus* (*Pipistrellus*) *kuhlii*
 (This should be *Pipistrellus hesperidus*. See Kock (2001))
 African Chiroptera name *Pipistrellus hesperidus*
 b Second upper incisor teeth only slightly smaller than first 49
- 49 a Braincase flatter, cranium nearly level with the muzzle *Pipistrellus* (*Pipistrellus*) *rusticus*
 African Chiroptera name *Pipistrellus rusticus*

- b Braincase clearly raised above the level of the muzzle *Pipistrellus (Pipistrellus) nanus*
 African Chiroptera name *Pipistrellus nanus*
- 50 a Wing membranes white or translucent *Eptesicus rendalli*
 African Chiroptera name *Neoromicia rendalli*
- b Wing membranes dark 51
- 51 a Size larger, forearm over 40; inner upper incisor teeth unicuspid *Eptesicus hottentotus*
 b Size smaller, forearm under 40; inner upper incisor teeth bicuspid 52
- 52 a Forearm 34.5 - 38 *Eptesicus melckorum*
 African Chiroptera name *Neoromicia melckorum*
- b Forearm 35 or less 53
- 53 a Cranial portion of skull elevated above rostrum (Fig. 84.1) *Eptesicus zuluensis*
 African Chiroptera name *Neoromicia zuluensis*
- b Cranial portion of skull not elevated above rostrum (Fig. 86.1) 54
- 54 a Colour of the upper parts paler; wing membranes edged with white; fur on the upper
 parts up to 8 mm long; skull lacking the upwardly projecting "helmet" in the occipital
 region *Eptesicus somalicus*
 African Chiroptera name *Neoromicia somalicus*
- b Colour of the upper parts darker; wing membranes not edged with white; fur on the
 upper parts not over 5 mm long; skull with a "helmet" in the occipital region *Eptesicus*
capensis
 African Chiroptera name *Neoromicia capensis*
- c Size larger, forearm 29 - 35; skull with posterior occipital "helmet" *Eptesicus*
(Eptesicus) capensis
 African Chiroptera name *Neoromicia capensis*
- 55 a Size large, forearm 75 - 80; total length skull over 30 *Scotophilus nigrita*
 b Size smaller, forearm 43 - 65 56
- 56 a Forearm 50 - 65; total length skull 20 - 23 *Scotophilus dinganii*
 b Forearm 43 - 50; skull 16 - 19 *Scotophilus viridis*
- 57 a Size large, forearm 34 - 39; total length of skull 15 or more; colour above reddish-
 chestnut, under parts either whitish or white tinged buffy *Kerivoula argentata*
 b Size smaller, forearm 32 - 36; total length of skull 13.5 or less; colour brownish,
 greyish-brown or dull buffy, the under parts buffy, whitish at least on the chest and
 belly *Kerivoula lanosa*
- 58 a Average total length of skull 16 or more, forearm 45 - 50 *Miniopterus inflatus*
 b Average total length of skull 14 - 15, forearm 42 - 47 59
- 59 a Average total length of skull 14, forearm 42 - 44 *Miniopterus fraterculus*
 b Average total length of skull 15, forearm 42 - 47 *Miniopterus schreibersii*
- 60 a Prominent vertical projection on zygoma; ears very large, 38 - 40, conjoined on
 extended snout; size very large, forearm 62 - 73; conspicuous bicolored pelage
 pattern, with a pale collar separating dark anterior and posterior regions of body
 *Otomops martiensseni*
- b Not as above 61
- 61 a Skull conspicuously flattened, greatest depth of braincase not more than one-third of
 greatest width *Sauromys petrophilus*
- b Skull not conspicuously flattened (genus *Tadarida*) 62
- 62 a Only 4 upper post-canine cheek teeth; M³ not reduced; upper incisors widely
 separated by large palatal emargination; six lower incisor teeth; ears separate; size
 small, forearm about 38 (subgenus *Mormopterus*) *Tadarida (Mormopterus)*
acetabulosus
 African Chiroptera name *Mormopterus acetabulosus*
- b 5 upper post-canine cheek teeth (the small premolar very reduced, sometimes absent
 in *T. (Mops) condylura*, but in that case with M³ reduced, ears conjoined, palatal
 emargination rudimentary or absent, size large, forearm 43 - 49); normally four lower
 incisor teeth, rarely six; ears conjoined or separate; forerarm 27 - 66 mm 63
- 63 a M³ reduced, cusps rarely more than a V pattern; palatal emargination small or
 absent; ears generally conjoined, sometimes with a post-aural tuft; size small to large,
 forearm 27 - 66 (subgenus *Mops*) 65
- b M³ not reduced, cusps forming an N pattern 64
- 64 a Palatal emargination absent or rudimentary; ears conjoined, often with post-aural tuft,
 which is sometimes well developed; size medium, forearm 35 - 52 (subgenus

- Chaerephon*)..... 66
- b Palatal emargination well-developed; ears generally separate; size medium to large, forearm 45 - 66 (subgenus *Tadarida*)..... 69
- 65 a Size large, forearm 58 - 66; skull length 26 - 28..... *Tadarida (Mops) midas*
African Chiroptera name *Mops (Mops) midas*
- b Size smaller, forearm 44 - 50 *Tadarida (Mops) condylura*
African Chiroptera name *Mops (Mops) condylurus*
- 66 a Size larger, forearm 42 - 52 67
- b Size smaller, forearm 34 - 42 68
- 67 a Conspicuous lateral band of white hair on the wing membrane near the body; wing membranes pale; forearm 44 - 50; upper parts not flecked with white *Tadarida (Chaerephon) nigeriae*
African Chiroptera name *Chaerephon nigeriae*
- b No white lateral bands; wing membranes dark; forearm 46 - 51; upper parts flecked with white *Tadarida (Chaerephon) bivittata*
African Chiroptera name *Chaerephon bivittatus*
- 68 a Males with long (12 mm) bicoloured post-aural crests (dark basally, light apically); forearm 34 - 39; colour of upper parts pale, under parts whitish *Tadarida (Chaerephon) chapini*
African Chiroptera name *Chaerephon chapini*
- b Males with short (10 mm or less) unicoloured post-aural crest; upper parts not pale, under parts variable in colour with or without white on the median area; forearm 37 - 42..... *Tadarida (Chaerephon) pumila*
African Chiroptera name *Chaerephon pumilus*
- 69 a Size large, forearm 57 - 66..... 70
- b Size medium, forearm 45 - 53..... 72
- 70 a Ears very large, conjoined at base near the nostrils and projecting well beyond muzzle when laid forward; under parts white or buffy with narrow brown flank strips; skull, particularly rostrum, very narrow; lower canines almost touching at their bases; forearm 63 *Tadarida (Tadarida) lobata*
African Chiroptera name *Tadarida lobata*
- b Ears smaller, not conjoined at inner margin, situated well back from the nostrils and barely projecting beyond muzzle when laid forward; under parts without or with restricted white area; skull not narrowed in rostral region; forearm 57 - 66 71
- 71 a Skull very broad and heavy, particularly in rostral region, total length 23.5 - 25.7; lower canines almost touching at their bases; under parts mostly brownish, sometimes with median white area; forearm 63 - 66 *Tadarida (Tadarida) ventralis*
African Chiroptera name *Tadarida ventralis*
- b Skull much less broad in rostral region, total length of skull 22 - 22.9; lower canines almost touching at their bases; under parts with variable white band on mid-ventral line; forearm 57 - 62..... *Tadarida (Tadarida) fulminans*
African Chiroptera name *Tadarida fulminans*
- 72 a Size larger, forearm 44 - 53; total length of skull 19 - 21; braincase flat; lower canines widely separated at their bases; no black area on chin and throat *Tadarida (Tadarida) aegyptiaca*
African Chiroptera name *Tadarida aegyptiaca*
- b Size smaller, forearm 47.5 or less; total length of skull 18 - 20; braincase elevated; lower canines almost touching at their bases; chin and throat generally black *Tadarida (Tadarida) ansorgei*
African Chiroptera name *Chaerephon ansorgei*

Appendix 5o: Qumsiyeh, M. (1985). The bats of Egypt

- 1 a Ear simple, with margin forming a complete ring; tragus and antitragus absent; second finger clawed; skull large (GLS greater than 40); molar and premolar teeth low crowned (Megachiroptera: Pteropodidae) *Rousettus aegyptiacus*
 b Ear margin not forming complete ring; tragus or antitragus present; second finger not clawed; skull size medium to small (GLS less than 40); molar and premolar teeth high crowned (Microchiroptera) 2
- 2 a Muzzle with cutaneous growth forming an elaborate noseleaf structure; tragus absent but antitragus well developed; nasal branches of premaxilla absent, palatal branches fused medially and free of maxilla laterally (Rhinolophidae)..... 9
 b Muzzle with no elaborate noseleaf structure; tragus present; nasal branches of premaxilla present or absent; palatal branches present or absent, if not as above .. 3
- 3 a Tail protrudes from dorsal surface of uropatagium; premaxilla with nasal branches only, palatal branches absent (Emballonuridae) 8
 b Tail either completely enclosed by, or protrudes from posterior end of uropatagium; premaxilla always with palatal branches; nasal branches present or absent..... 4
- 4 a Uropatagium short, enclosing less than one-third of the long, thin tail; dental formula $1/2 \ 1/1 \ 1/2 \ 3/3 = 28$; nasal region of skull inflated (Rhinopomatidae) 7
 b Uropatagium long, enclosing more than one-half of the tail, teeth more than 28; nasal region of skull not inflated 5
- 5 a Muzzle with longitudinal groove; nasal branches absent; skull with deep concavity on anterior surface between the orbits (Nycteridae)..... *Nycteris thebaica*
 b Muzzle simple; nasal branches present; no deep concavity on anterior surface of the skull 6
- 6 a Tail scarcely or not protruding beyond posterior edge of the wide uropatagium (Vespertilionidae) 12
 b Tail protruding conspicuously beyond posterior edge of narrow uropatagium (Molossidae) 21
- 7 a Larger; FA 62 - 71, GLS 18.7 - 22.1; tail usually shorter than forearm; lacrymal region of skull relatively shallow; males show significant development of sagittal crest; posterior edge of palate forms an acute angle, never with parallel sides ..*Rhinopoma microphyllum*
 b Smaller; FA 48.3 - 61, GLS 16.0 - 18.5; tail usually longer than forearm; lacrymal region of skull inflated; males do not show significant development of sagittal crest; posterior edge of palate forms with rounded profile, sides almost or are parallel *Rhinopoma hardwicki*
 African Chiroptera name *Rhinopoma hardwickii*
- 8 a Fur extends to base of uropatagium both dorsally and ventrally; smaller animal, FA 59 - 64, GLS 19.8 - 21.1; skull smooth with rounded braincase *Taphozous perforatus*
 b Fur does not extend to bats of uropatagium dorsally nor ventrally; larger, FA 67 - 82.5, GLS 24.8 - 31.8; skull rugose with distinct sagittal and lambdoidal crests. *Taphozous nudiventris*
- 9 a Noseleaf with three dorsally projecting leaflets and without sella or connecting process; only two pairs of lower premolars*Asellia tridens*
 b Noseleaf with one dorsally projecting leaflet (lancet) and with a distinct sella and connecting process; three pairs of lower premolars present (Rhinolophinae) 10
- 10 a Size small, FA 33.5 - 38.6, GLS 14.5 - 16.0 *Rhinolophus hipposideros*
 b Size larger, FA more than 41, GLS more than 18 11
- 11 a Dorsal connecting process of sella blunt; PM2 displaced labially from toothrow or absent *Rhinolophus clivosus*
 b Dorsal connecting process of sella long and pointed; PM2 in toothrow and clearly separating canine and PM4 *Rhinolophus mehelyi* (and *R. euryale*)
 African Chiroptera name *Rhinolophus mehelyi*
- 12 a Large, FA greater than 55, GLS greater than 21; ear long measuring 34 - 42 in Egyptian specimens; one pair of upper incisors *Otonycteris hemprichi*
 African Chiroptera name *Otonycteris hemprichii*
 b Small to medium sized, FA less than 50, GLS less than 20; ear short or long; one or two pairs of upper incisors 13
- 13 a Mandible with three premolars and three molars; ears and tragus elongated *Plecotus*

- austriacus*
- 14 b Five or less lower postcanine teeth; ears and tragus not elongated 14
 a One pair of upper incisors *Nycticeius schlieffenii*
 African Chiroptera name *Nycticeinops schlieffenii*
- 15 b Two pairs of upper incisors 15
 a Four upper postcanine teeth *Eptesicus bottae*
 b Five upper postcanine teeth (but PM2 is absent on some specimens of *Pipistrellus kuhlii* on one side) 16
- 16 a Ear connected; skull with a narrow and concave rostrum *Barbastella barbastellus*
 African Chiroptera name *Barbastella barbastellus*
 b Ears separate; skull with a wider and convex rostrum (*Pipistrellus*) 17
- 17 a Outer upper incisor much less than half length of inner 18
 b Outer upper incisor more than half length of inner 19
- 18 a C-M³ greater than 4.5; GLS greater than 12.0; skull relatively rugose with distinct lambdoidal ridges *Pipistrellus kuhlii*
 b C-M³ less than 4.5; GLS less than 12.0; skull slender, with braincase rounded; rostrum slightly shortened and hence forehead is more elevated than in *P. kuhlii*.
 *Pipistrellus aegyptius*
 African Chiroptera name *Pipistrellus deserti*
- 19 a Inner upper incisor unicuspid; PM2 small and possibly not functional; rostrum flattened *Pipistrellus ariel*
 African Chiroptera name *Hypsugo ariel*
 b Inner upper incisor bifid or bicuspid; PM2 clearly distinguished and functional; rostrum concave 20
- 20 a Inner upper incisor deeply cleft; ventral fur whitish *Pipistrellus rueppellii*
 b Inner upper incisor bifid but not deeply cleft; ventral fur not whitish *Pipistrellus bodenheimeri*
- 21 a Larger, FA greater than 54, GLS greater than 23; mandible with three pairs of lower incisors; skull elongate *Tadarida teniotis*
 b Smaller, FA less than 54, GLS less than 22; mandible with two pairs of lower incisors; skull more rounded *Tadarida aegyptiaca*

Appendix 5p: Aulagnier and Thevenot (1986). Catalogue des mammifères sauvages du Maroc

1	a	Portion de queue libre dépassant largement la membrane interfemorale	2
	b	Queue incluse dans la membrane interfemorale (excepté parfois 1 ou 2 vertèbres)	4
2	a	Feuille nasale triangulaire; Portion de queue libre très longue (Famille Rhinopomatidae)	3
	b	Pas de feuille nasale; Portion de queue libre réduite (Famille Molossidae)... <i>Tadarida teniotis</i>	
3	a	AB: 58-75 mm; Queue plus courte que l'Avant-Bras	<i>Rhinopoma microphyllum</i>
	b	AB: H6-53 mm; Queue plus longue que l'Avant-Bras.....	<i>Rhinopoma hardwickei</i>
		African Chiroptera name	<i>Rhinopoma hardwickii</i>
4	a	Absence de feuille nasale; Tragus présent (Famille Vespertilionidae)	10
	b	Feuille nasale complexe; Tragus absent (Famille Rhinolophidae)	5
	c	Sillon médian sur le museau; Tragus présent (Famille Nycteridae) <i>Nycteris thebaica</i>	
5	a	Partie postérieure de la feuille nasale en languette triangulaire aigüe; Doigts à trois phalanges	6
	b	Partie postérieure de la feuille nasale arrondie ou à trois pointes; Doigts à deux phalanges	9
6	a	AB > 54 mm	<i>Rhinolophus ferrumequinum</i>
	b	AB < 40 mm	<i>Rhinolophus hipposideros</i>
	c	40 < AB < 54 mm	7
7	a	2ème phalange Doigt IV plus de deux fois plus longue que la première phalange...	8
	b	2ème phalange Doigt IV moins de deux fois plus longue que la première phalange	<i>Rhinolophus blasii</i>
8	a	see graph	<i>Rhinolophus euryale</i>
	b	see graph	<i>Rhinolophus mehelyi</i>
9	a	Partie postérieure de la feuille nasale arrondie	<i>Hipposideros caffer</i>
	b	Partie postérieure de la feuille nasale à trois pointes	<i>Asellia tridens</i>
10	a	2ème phalange du doigt III moins de 2 fois plus longue que la première	11
	b	2ème phalange du doigt III 3 fois plus longue que la première <i>Miniopterus schreibersi</i>	
		African Chiroptera name	<i>Miniopterus schreibersii</i>
11	a	Oreilles séparées l'une de l'autre à leur base sur la tête	12
	b	Oreilles réunies l'une à l'autre par leur base sur la tête	14
12	a	2 paires d'incisives supérieures	13
	b	1 paire d'incisives supérieures	<i>Otonycteris hemprichi</i>
		African Chiroptera name	<i>Otonycteris hemprichii</i>
13	a	Tragus allongé et pointu (genus <i>Myotis</i>)	15
	b	Tragus court et arrondi (Genera <i>Pipistrellus</i> , <i>Nyctalus</i> , <i>Eptesicus</i>)	19
14	a	Oreilles très longues; Tragus allongé	<i>Plecotus austriacus</i>
	b	Oreilles courtes; Tragus court	<i>Barbastella barbastellus</i>
15	a	AB < 50 mm	16
	b	AB > 50 mm	<i>Myotis blythii</i>
16	a	Longueur du pied inférieure à la moitié de celle du tibia	17
	b	Longueur du pied supérieure à la moitié de celle du tibia; 38 < AB < 42 mm... <i>Myotis capaccinii</i>	
17	a	AB < 35 mm	<i>Myotis mystacinus</i>
	b	AB > 35 mm	18
18	a	Oreille nettement échancrée; Quelques poils sur la membrane interfémorale . <i>Myotis emarginatus</i>	
	b	Oreille non échancrée; Frange de poils sur la membrane interfémorale. <i>Myotis nattereri</i>	
19	a	AB < 35 mm	20
	b	AB > 45 mm	23
20	a	Incisive supérieure interne bicuspidée	21
	b	Incisive supérieure interne unicuspidée	<i>Pipistrellus kuhli</i>
		African Chiroptera name	<i>Pipistrellus kuhlii</i>
21	a	1ère Premolaire supérieure visible en vue latérale; AB < 33 mm	22
	b	1ère Premolaire supérieure rudimentaire (invisible); AB > 32 mm <i>Pipistrellus savii</i>	
		African Chiroptera name	<i>Hypsugo savii</i>

-
- 22 a Incisive supérieure externe tres petite; Pelage ventral blanc *Pipistrellus rueppelli*
African Chiroptera name *Pipistrellus rueppelli*
- b Incisive supérieure externe de bonne taille; Pelage ventral gris *Pipistrellus pipistrellus*
- 23 a Tragus aussi long que large *Nyctalus lasiopterus*
- b Tragus deux fois plus long que large *Eptesicus serotinus*

Appendix 5q: Meester et al. (1986). Classification of Southern African mammals

1	a	Second digit (in African species) ending in a claw; margin of ear conch forming a complete ring; tragus always absent; interfemoral membrane greatly reduced, little more than a narrow band along inside margin of hind legs; tail absent or rudimentary; cheekteeth simple, without well-developed cusp pattern (suborder Megachiroptera)	2
	b	Second digit without a claw; margin of ear conch not forming a complete ring; tragus generally present (absent in two families); interfemoral membrane and tail generally well-developed; cheek teeth cuspidate, molars generally with clearly defined W pattern (suborder Microchiroptera)	8
2	a	Ears with white basal tufts	3
	b	Ears without white basal tufts	4
3	a	Six prominent palatal ridges, one or two being post-dental, and these no different from inter-dental ridges; post-dental palate strongly concave posteriorly (genus <i>Epomophorus</i>)	5
	b	Five palatal ridges, the last two post-dental, these being differentiated from interdental ridges, thick, and each bearing two triangular projections; post-dental palate flattened posteriorly	<i>Epomops dobsonii</i>
4	a	Forearm generally 110 - 130 mm; colour generally tawny, with dorsal fur restricted to a narrow median band, sharply demarcated from naked wing membranes	<i>Eidolon helvum</i>
	b	Forearm 65 - 102 mm; ruff of stiff hair present or absent on lower neck of adult males (genus <i>Rousettus</i>)	7
5	a	One post-dental palatal ridge; forearm 77 - 89 mm in males, 72 - 86 mm in females	<i>Epomophorus wahlbergi</i>
	b	Two post-dental palatal ridges	6
6	a	Fourth palatal ridge mid-way between third and fifth	<i>Epomophorus crypturus</i>
		African Chiroptera name	<i>Epomophorus gambianus crypturus</i>
	b	Fourth palatal ridge much nearer the third than fifth	<i>Epomophorus angolensis</i>
7	a	Wings from first toe; hair short and sleek; cheekteeth heavy; forearm generally 90 - 105 mm; premaxillaries in contact but not co-ossified; adult males without collar of stiff hairs	<i>Rousettus (Rousettus) aegyptiacus</i>
		African Chiroptera name	<i>Rousettus aegyptiacus</i>
	b	Wings from second toe; hair longer and coarser; cheekteeth reduced in bulk, short and broad; forearm 66 - 83 mm; premaxillaries co-ossified; adult males with collar of stiff hairs	<i>Rousettus (Lissonycteris) angolensis</i>
		African Chiroptera name	<i>Lissonycteris angolensis</i>
8	a	Terminal portion of tail projecting markedly past edge of interfemoral membrane	9
	b	Tail almost entirely enclosed within the interfemoral membrane	10
9	a	Free terminal portion of tail emerges above middle of upper surface of interfemoral membrane (family Emballonuridae)	13
	b	Free terminal portion of tail projects considerably beyond hind margin of interfemoral membrane (family Molossidae)	60
10	a	Muzzle without nose-leaves or maked modifications of any kind (family Vespertilionidae)	32
	b	Muzzle with nose-leaves or deep central slit	11
11	a	Muzzle with deep central longitudinal slit lined with fleshy dermal outgrowths (family Nycteridae)	15
	b	Face without slit but with well-developed nose-leaves covering muzzle	12
12	a	Posterior leaflet of nose-leaf subtriangular, with erect pointed tip; toes with three phalanges (family Rhinolophidae)	20
	b	Posterior leaflet of nose-leaf with upper edge either elliptical in outline or tridentate; toes with two phalanges (family Hipposideridae)	29
13	a	Six lower incisors; forearm not more than 57 mm; no gular sac	<i>Coleura afra</i>
	b	Four lower incisors; forearm more than 57 mm; gular sac present or absent (genus <i>Taphozous</i>)	14
14	a	Entire dorsal fur conspicuously grizzled greyish; entire ventral surface clear white; forearm 58 - 64 mm; large gular sac in males	<i>Taphozous mauritanus</i>
	b	Dorsal fur never grizzled, colour pale brownish; ventral surface dusky; forearm 60 - 67	

- mm; no gular sac *Taphozous perforatus*
- 15 a Upper incisors trifid; tragus falciform or semilunate (*hispidus* group) 16
 b Upper incisors bifid; tragus semilunate or pyriform 17
- 16 a Forearm 36 - 45 mm; ear 18 - 25 mm; condylocanine length less than 18 mm *Nycteris hispidus*
 b Forearm 57 - 66 mm; ear 28 - 35 mm; condylocanine length more than 18 mm *Nycteris grandis*
- 17 a Tragus semi-lunate, base of posterior margin not notched (*macrotis* group) 18
 b Tragus pyriform, base of its posterior margin shallowly notched (*thebaica* group) . 19
- 18 a General colour greyish; forearm 37 - 42 mm *Nycteris woodi*
 b General colour brownish; forearm 45 - 50 mm *Nycteris macrotis*
- 19 a Size smaller; forearm 42 - 52 mm, ears larger, 28 - 37 mm; skull less massive; breadth of supraorbital flanges about 6.8 mm *Nycteris thebaica*
 b Size larger; forearm over 50 mm; ears smaller, 22 mm; skull massive, breadth of supraorbital flanges about 9.0 mm *Nycteris vinsoni*
- 20 a Face and/or lateral margins of the sella liberally furnished with long hairs; connecting process low, rounded; greatest width of horseshoe generally over 9 mm 21
 b Sella naked; connecting process rounded or pointed; greatest width of horseshoe below 9 mm 22
- 21 a Forearm 62 - 67 mm *Rhinolophus hildebrandti*
 African Chiroptera name *Rhinolophus hildebrandtii*
 b Forearm 50 - 60 mm *Rhinolophus fumigatus*
- 22 a Anterior upper premolar, when present, external to toothrow; canine and fourth upper premolar in contact; connecting process bluntly pointed 23
 b Anterior upper premolar in toothrow; canine and fourth upper premolar not in contact; connecting process blunt or sharply pointed 24
- 23 a Forearm 50 - 57 mm *Rhinolophus clivosus*
 b Forearm 45 - 50 mm *Rhinolophus darlingi*
- 24 a Connecting process rises to an erect point; interpterygoid groove usually shallow, not clearly defined by bordering ridges; anterior upper premolar usually not crowded between canine and fourth upper premolar, longer than wide 25
 b Connecting process with a low bluntly pointed tip; interpterygoid groove deep and clearly defined by bordering ridges; anterior upper premolar usually more or less crowded between canine and fourth upper premolar, at least as wide as it is long 26
- 25 a First phalanx of fourth finger notably shortened in relation to metacarpal length; connecting process pointed; molar width less than half width of palate between molars *Rhinolophus landeri*
 b First phalanx of fourth finger not notably shortened in relation to metacarpal length; connecting process rises to a high narrow horn; molar width more than half width of palate between molars *Rhinolophus blasii*
- 26 a Larger, forearm 47 - 51 mm; skull 20 mm or more *Rhinolophus capensis*
 b Smaller, forearm 40 - 46 mm; skull 18.7 mm or less 27
- 27 a Sella broader; ears longer, 20 - 22 mm; condylocanine length > 15.5 mm *Rhinolophus simulator*
 b Sella narrower; ears shorter, 18 - 20 mm; condylocanine length < 15.5 mm 28
- 28 a Front edge of connecting process almost concave; lancet with sides almost convex; fur whitish at base *Rhinolophus denti*
 b Front edge of connecting process convex; lancet with sides concave, tip pointed; fur nearly unicoloured *Rhinolophus swinnyi*
- 29 a Posterior leaflet on noseleaf simple in outline, elliptical or rounded, not tridentate; ears either separate or united by low band; rostrum at least half as long as the braincase; small upper premolar present; forearm 40 - 110 (genus *Hipposideros*) 31
 b Posterior leaflet of noseleaf tridentate; ears always separate; small upper premolar present or absent; rostrum sometimes less than half as long as braincase; zygoma not, or greatly, expanded; forearm 31 - 54 mm 30
- 30 a Size very small, forearm 31 - 35 mm; ears very low, rounded, rim-like, 8 mm; noseleaf small and inconspicuous; thumbs minute; rostrum less than half length of braincase; zygoma not greatly expanded *Cloeotis percivali*
 b Size larger, forearm 50 - 54 mm; ears short, 10 - 14 mm, but pointed; noseleaf conspicuous; thumbs normal; rostrum more than half the length of the braincase;

- zygoma greatly expanded into a wide plate; upper incisors bifid... *Triaenops persicus*
- 31 a Size very large; forearm 90 - 110 mm; ears very narrow and pointed; longitudinal frontal sac in both sexes *Hipposideros commersoni*
- b Size much smaller; forearm 40 - 50 mm; ears broad *Hipposideros caffer*
- 32 a Second phalanx of third digit not especially elongated..... 33
- b Second phalanx of third digit about three times as long as first; braincase high and rounded (subfamily MINIOPTERINAE; genus *Miniopterus*) 58
- 33 a Ears not funnel-shaped, without deep emargination below tip; tragus short and broad or long and narrow, but not sharply pointed; braincase not particularly high and rounded (subfamily VESPERTILIONINAE) 34
- b Ears funnel-shaped, with deep emargination below tip; tragus long, narrow, sharply pointed; braincase high and rounded (subfamily KERIVOULINAE; genus *Kerivoula*) 57
- 34 a Six upper, six lower cheek teeth on either side (genus *Myotis*) 41
- b Fewer than six upper and six lower cheek teeth 35
- 35 a Five upper, five lower cheekteeth; ears not lengthened; two upper incisors on each side; wing with fifth finger not shortened; ears not joined at base (genus *Pipistrellus*) 47
- b Four upper, five lower cheek teeth; ears notably lengthened only in exceptional cases 36
- 36 a Two upper incisors on each side..... 37
- b One upper incisor on each side 39
- 37 a Rostrum very short and broad; braincase very high more than two-thirds of condylobasal length; lower lip with lobe at posterior angle; frequently with body pattern of spots and/or stripes, or conspicuous reticulation of wing membranes *Chalinolobus (Glauconycteris) variegatus*
African Chiroptera name *Glauconycteris variegata*
- b Rostrum not shortened; braincase not elevated; no body or wing pattern 38
- 38 a Ear 18 mm or more, about half length of forearm (genus *Laephotis*) 45
- b Ears less than 18 mm, much less than half length of forearm (genus *Eptesicus*)... 51
- 39 a Size larger, forearm not less than 46 mm; first and second upper molars with W-pattern obsolescent; tragus long and tapering (genus *Scotophilus*) 55
- b Size smaller, forearm less than 46 mm; first and second upper molars with normal W-pattern; tragus either sickle-shaped or short and broad 40
- 40 a Skull with rostrum not broadened; palatal emargination narrow; anterior lower premolar about half the crown area of the next premolar; upper canines with rounded anterior surface; tragus halfmoon-shaped; penis not enlarged; forearm 29 - 33 mm *Nycticeius schlieffenii*
African Chiroptera name *Nycticeinops schlieffenii*
- b Skull with rostrum notably broadened, particularly across lachrymals; palatal emargination broader; upper cheek teeth four or five; lower premolars equal in crown area; upper canines with broad flat anterior face; tragus short and broad; penis greatly lengthened; forearm 28 - 38 mm *Scotoecus albofuscus*
- 41 a Size larger, forearm over 52 mm..... *Myotis (Chrysopteron) welwitschii*
African Chiroptera name *Myotis welwitschii*
- b Size smaller, forearm under 52 mm 42
- 42 a Wings with glands; first two upper premolars greatly reduced and crowded together laterally 43
- b Wings without glands; first two upper premolars not greatly reduced, not crowded together laterally 44
- 43 a Size smaller, forearm 32.5 - 2.9 mm *Myotis (Cistugo) seabrai*
African Chiroptera name *Cistugo seabrae*
- b Size larger, forearm 34.5 mm..... *Myotis (Cistugo) lesueuri*
African Chiroptera name *Cistugo lesueuri*
- 44 a Size larger, forearm 47 - 52 mm *Myotis (Selysius) tricolor*
African Chiroptera name *Myotis tricolor*
- b Size smaller, forearm less than 47 *Myotis (Selysius) bocagei*
African Chiroptera name *Myotis bocagii*
- 45 a Larger, total skull length over 16 mm; ear length from meatus more than 21 mm; tragus with notch near base of the outside edge..... 46
- b Smaller, total skull length under 15 mm; ear length no more than 18 mm; tragus

- without notch near base of the outside edge; dorsal colour buffy brown *Laephotis botswanae*
- 46 a Ear length 24 - 45 mm; dorsal colour light drab..... *Laephotis namibensis*
 b Ear length 21 - 22 mm; dorsal colour mid-brown..... *Laephotis wintoni*
- 47 a First upper incisor not, or scarcely, bifid; not grey and white, usually some shade of brown; penis less than half length of tibia the under parts brown or grey (subgenus *Pipistrellus*) 48
 b First upper incisors markedly bifid; grey above and white below; penis more than half length of tibia *Pipistrellus (Vansonia) rueppellii*
 African Chiroptera name *Pipistrellus rueppellii*
- 48 a Outer upper incisor more than half length of inner upper incisor; forehead strongly concave; upper canine and posterior upper premolar separated by a gap through which anterior upper premolar can be clearly seen rising above cingula of adjoining teeth; interdental palate clearly longer than broad *Pipistrellus (Pipistrellus) nanus*
 African Chiroptera name *Pipistrellus nanus*
 b Outer upper incisor less than half length of inner upper incisor; forehead usually flat or weakly concave; upper canine and posterior upper premolar in contact or barely separated, anterior upper premolar seen from the side only with difficulty, usually not rising appreciably above cingula of adjoining teeth 49
- 49 a Interdental palate as broad as long; forehead flat; total length of skull 12 mm or less *Pipistrellus (Pipistrellus) rusticus*
 African Chiroptera name *Pipistrellus rusticus*
 b Interdental palate longer than broad; forehead at least slightly concave; total length of skull more than 12 mm..... 50
- 50 a Posterior upper incisor barely extending beyond cingulum of anterior upper incisor; anterior upper premolar a pointed tooth rising above cingulum of canine but not above cingulum of posterior upper premolar; maxillary tooththrow more than 4.5 mm *Pipistrellus (Pipistrellus) kuhlii*
 African Chiroptera name *Pipistrellus kuhlii*
 b Posterior upper incisor extending well beyond cingulum of anterior upper incisor; anterior upper premolar a flat-crowned tooth completely below cingula of adjoining teeth; maxillary tooththrow less than 4.5 mm *Pipistrellus (Pipistrellus) anchietai*
 African Chiroptera name *Hypsugo anchietae*
- 51 a Wing membranes white or translucent *Eptesicus rendalli*
 African Chiroptera name *Neoromicia rendalli*
 b Wing membranes dark 52
- 52 a Size larger, forearm more than 40 mm; inner upper incisors unicuspid..... *Eptesicus hottentotus*
 b Size smaller, forearm less than 40 mm; inner upper incisors bicuspid 53
- 53 a Forearm 34.5 - 38 mm *Eptesicus melckorum*
 African Chiroptera name *Neoromicia melckorum*
 b Forearm 35 mm or less 54
- 54 a Dorsal colour paler; wing membranes edged with white; dorsal fur up to 8 mm long; forearm 30 - 32 mm; condylobasal length usually less than 11.9 mm; skull lacking posterior occipital "helmet" *Eptesicus somalicus*
 African Chiroptera name *Neoromicia somalicus*
 b Dorsal colour darker; wing membranes not edged with white; dorsal fur not more than 5 mm long; forearm 29 - 35 mm; condylobasal length more than 11.9 mm; skull with posterior occipital "helmet" *Eptesicus capensis*
 African Chiroptera name *Neoromicia capensis*
 c Size larger, forearm 29 - 35; skull with posterior occipital "helmet" *Eptesicus (Eptesicus) capensis*
 African Chiroptera name *Neoromicia capensis*
- 55 a Size very large, forearm 75 - 80; total skull length 30 mm or more *Scotophilus nigrita*
 b Size smaller, forearm 43 - 65 mm; skull length 16 - 23 mm 56
- 56 a Forearm 50 - 65 mm; skull 20 - 23 mm *Scotophilus dinganii*
 b Forearm 43 - 50 mm; skull 16 - 19 mm *Scotophilus borbonicus*
- 57 a Size large, forearm 34 - 39 mm; skull > 15 mm; colour above bright reddish chestnut, below either whitish or buffish, never brown..... *Kerivoula argentata*
 b Size smaller, forearm 32 - 36 mm; skull < 13.5 mm; colour brownish or greyish-brown

- above, sometimes lightly grizzled with greyish white or white, and greyish brown to greyish white or white below *Kerivoula lanosa*
- 58 a Size largern forearm 45 - 50 mm; skull length 16 mm and more .. *Miniopterus inflatus*
 b Size smaller, forearm 42 - 47 mm; skull length c. 14 - 15..... 59
- 59 a Forearm 42 - 44 mm; skull length c. 14 mm; colour brownish black and/or russet
 *Miniopterus fraterculus*
 b Forearm 42 - 47 mm; skull length c. 15 mm; colour slaty brown *Miniopterus schreibersii*
- 60 a Prominent vertical projection on zygoma; size very large, forearm 62 - 73 mm; ears very large, 38 - 40 mm, conjoined on extended snout; conspicuous bicoloured dorsal pelage pattern with pale collar separating dark anterior and posterior regions of body
 *Otomops martiensseni*
 b Not combining the above characters..... 61
- 61 a Skull conspicuously flattened, greatest depth of braincase not more than one-third of greatest width; 5 upper cheekteeth (P¹ well developed); ears separate, not widely spaced; forearm 36 - 42 mm *Sauromys petrophilus*
 b Skull not conspicuously flattened; 4 - 5 upper cheekteeth, ears separate or conjoined; forearm 30 - 66 mm 62
- 62 a Only 1 upper premolar; three pairs of lower incisors; large palatal emargination; ears separate; size small, forearm c. 38 mm, condylobasal length less than 15 mm (genus *Mormopterus*) *Mormopterus acetabulosus*
 b Almost always two upper premolars; not more than two pairs of lower incisors; condylobasal length generally more than 15 mm (genus *Tadarida*) 63
- 63 a Anterior palatal emargination well developed, extending beyond upper incisors and including area of incisive foramina; third commissure of last upper molar well developed, almost as long as second commissure 64
 b Anterior palatal emargination greatly reduced, not extending behind upper incisor and separated from incisive foramina by a bony bar 69
- 64 a Condylobasal length more than 21 mm..... 65
 b Condylobasal length less than 21 mm 67
- 65 a Interdental palatal length more than twice palatal width at anterior end, ears very large, united at base close to nostrils, and projecting well beyond muzzle when laid forward; basisphenoid pits shallow; lower canines almost touching at base; forearm 63 mm..... *Tadarida (Tadarida) lobata*
 African Chiroptera name *Tadarida lobata*
 b Interdental palatal length less than twice palatal width at anterior end..... 66
- 66 a Larger, total skull length 23.5 - 25.7 mm, forearm 63 - 66 mm.... *Tadarida (Tadarida) ventralis*
 African Chiroptera name *Tadarida ventralis*
 b Smaller, total skull length 22 - 22.9 mm, forearm 57 - 62 mm *Tadarida (Tadarida) fulminans*
 African Chiroptera name *Tadarida fulminans*
- 67 a Forehead flat; width of anterior palatal emargination more than diameter of upper incisor; forearm 44 - 53 mm; lower canines widely separated at base *Tadarida (Tadarida) aegyptiaca*
 African Chiroptera name *Tadarida aegyptiaca*
 b Forehead elevated; width of anterior palatal emargination less than diameter or upper incisor; condylobasal length more than 17 mm 68
- 68 a Zygomatic breadth more than 12 mm *Tadarida (Chaerephon) bivittata*
 African Chiroptera name *Chaerephon bivittatus*
 b Zygomatic breadth less than 12 mm *Tadarida (Chaerephon) ansorgei*
 African Chiroptera name *Chaerephon ansorgei*
- 69 a Third commissure of last upper molar well developed, almost as long as second commissure; basisphenoid pits shallow, separated at most by a low ridge 70
 b Third commissure of last upper molar reduced, clearly shorter, and usually much shorter than second commissure 72
- 70 a Forehead virtually flat; maxillary tooththrow length more than 6.3 mm; interdental palate (measured at anterior end of posterior premolar) approximately twice as long as it is wide *Tadarida (Chaerephon) nigeriae*
 African Chiroptera name *Chaerephon nigeriae*
 b Forehead distinctly elevated; maxillary tooththrow less than 6.3 mm 71

- 71 a Interdental palate (measured at anterior end of posterior premolar) approximately twice as long as it is wide; males with long (13 - 14 mm) bicoloured postaural crest, dark basally, pale apically *Tadarida (Chaerephon) chapini*
African Chiroptera name *Chaerephon chapini*
- b Interdental palate approximately one-and-a-half times as long as it is wide; males with short (10 mm or less) unicoloured postaural crest *Tadarida (Chaerephon) pumila*
African Chiroptera name *Chaerephon pumilus*
- 72 a Condylbasal length more than 23 mm; forearm 58 - 66 mm *Tadarida (Mops) midas*
African Chiroptera name *Mops (Mops) midas*
- b Condylbasal length less than 21 mm; forearm 45 - 50 mm; third commissure of last upper molar clearly present and approximately half as long as second commissure *Tadarida (Mops) condylura*
African Chiroptera name *Mops (Mops) condylurus*

Appendix 5r: Qumsiyeh and Jones (1986). *Rhinopoma hardwickii* and *Rhinopoma muscatellum*

- | | | |
|---|---|---|
| 1 | a | Large; forearm 57 to 75 mm, greatest length of the skull 18 to 23 mm; skull robust, with well-developed sagittal and lambdoidal crests; rostrum with narial swellings poorly defined, almost flat <i>Rhinopoma microphyllum</i> |
| | b | Small; forearm 46 to 63 mm, greatest length of the skull 14 to 19 mm; skull slender and with rounded braincase; lambdoid and sagittal crests poorly developed; rostrum with well-defined narial swellings 2 |
| 2 | a | Muzzle with well-developed transverse dermal ridge; narial inflations rounded; posterior margin of palate rounded <i>Rhinopoma hardwickii</i> |
| | b | Muzzle with poorly developed, almost flat dermal ridge; narial inflations angular in profile; posterior margin of palate angular <i>Rhinopoma muscatellum</i> |

Appendix 5s: Happold (1987). The mammals of Nigeria.

- 1 a Second finger terminating in claw; ear conch forms complete ring around external ear opening; tragus absent; tail absent or very small; interfemoral membrane poorly developed; no nose-leaves or fleshy outgrowths on nasal region or forehead; large eyes; cheek teeth simple without well-developed cusps (Suborder Megachiroptera). 2
- b Second finger without terminal claw; inner and outer margins of ear conch arise at different points and are not joined at base; tragus usually present; tail long In most species with well-developed interfemoral membrane (except family Megadermatidae); nose-leaves or fleshy outgrowths present in some families; eyes mostly small and obscure; cheek teeth with well-developed cusps (Suborder Microchiroptera) 13
- 2 a Tongue with pointed tip, densely covered with long papillae (Fig. 3.7); FA 41 - 44, WT 10 - 15. *Megaloglossus woermanni*
- b Tongue with rounded tip, without papillae; FA more than 44, WT more than 15 3
- 3 a Head with large white spot between eyes; white spot at posterior margin of each eye; FA 49 - 55. *Scotonycteris zenkeri*
- b Head without white spots as above..... 4
- 4 a White basal ear-tufts present (often inconspicuous in *Nanonycteris veldkampii*). 5
- b White basal ear-tufts absent. 10
- 5 a Very large; FA 118 or more; wide cylindrical muzzle, not tapering towards nostrils. *Hypsignathus monstrosus*
- b Smaller; FA not more than 100; muzzle tapering towards nostrils..... 6
- 6 a FA 60 - 100. 7
- b FA less than 60. 9
- 7 a Head rounded; three prominent palatal ridges between tooth rows, followed by 5-6 less prominent ridges (Fig. 3.5); FA 80 - 90; TLS 44 - 51..... *Epomops franqueti*
African Chiroptera name *Epomops franqueti*
- b Head elongated; six prominent palatal ridges (Fig. 3.5); FA 66 - 97; TLS 40 - 67. 8
- 8 a FA 75 - 97; TLS 46 - 67. *Epomophorus gambianus*
- b FA 66 - 78; TLS 40 - 49. *Epomophorus anurus*
African Chiroptera name *Epomophorus labiatus*
- 9 a Nasal region broad; 5 - 7 broad palatal ridges extending to margins of palate, all except first two obviously divided by median groove (Fig. 3.S); FA 49 - 65. *Micropteropus pusillus*
- b Nasal region slender; 12 - 13 narrow palatal ridges, posterior ridges not extending to margins of palate (Fig. 3.5); FA 45 - 54..... *Nanonycteris veldkampii*
African Chiroptera name *Micropteropus pusillus*
- 10 a FA 110 or more; dorsal pelage dull yellow, hairs dark with dull yellow tips; no collar of stiff hairs on throat and neck of adult males. *Eidolon helvum*
- b FA less than 110; collar of stiff hairs on throat and neck of adult males (sometimes inconspicuous). 11
- 11 a FA 60 - 64; WT 35 - 41; palatal ridges as in Fig. 3.5; not associated with caves. *Myonycteris torquata*
African Chiroptera name *Myonycteris (Myonycteris) torquata*
- b FA more than 65; WT more than 41; usually associated with caves. 12
- 12 a FA 66 - 81; WT 54 - 92; pelage-dark brown, long and soft; well-developed collar of stiff hairs on throat of adult males; palatal ridges as In Fig. 3.5; cheek teeth about as broad as long; wings insert on second toe. *Rousettus angolensis*
African Chiroptera name *Lissonycteris angolensis*
- b FA 87 - 102;;WT 84 - 131; pelage dark brown, short; poorly developed collar of stiff hairs on throat of adult males; palatal ridges as In Fig. 3.5; cheek teeth longer than they are broad; wings insert on first toe. *Rousettus aegyptiacus*
- 13 a No visible tail (Family Megadermatidae) *Lavia frons*
- b Tail long and easily visible. 14
- 14 a Part of tail free of the interfemoral membrane. 15
- b Tail entirely enclosed in the interfemoral membrane. 17
- 15 a Free portion of tail emerges-upwards near centre of the interfemoral membrane (Family Emballonuridae) 20
- b Free portion of tail emerges at hind margin of the interfemoral membrane. 16
- 16 a Free portion of tail thick and broad, approximately equal in length to portion enclosed

		in the interfemoral membrane (Family Molossidae)	61
	b	Free portion of tail very long and slender (Family Rhinopomatidae).	<i>Rhinopoma microphyllum</i>
17	a	Face simple, without nose-leaves (Family Vespertilionidae)	39
	b	Face with nose-leaves.	6
18	a	Face with deep slit from nostrils to forehead, bordered by nose-leaves; tragus present; tail ends in characteristic 'Y'-shaped cartilage (Family Nycteridae)	24
	b	Face without deep slit from nostrils to forehead; noseleaves flattish, covering whole of nasal region; tragus absent or very small; tail does not end in 'Y'-shaped cartilage.	7
19	a	Posterior nose-leaf with an erect fleshy point (sella) (Family Rhinolophidae).....	29
	b	Posterior nose-leaf elliptical, without an erect fleshy point (Family Hipposideridae).....	33
20	a	FA less than 51; gular pouch absent; radio-metacarpal pouch absent....	<i>Coleura afra</i>
	b	FA more than 51; gular pouch present in males; radio-metacarpal pouch present.	21
21	a	FA more than 80; gular pouch in males and females; pelage dark brown; rainforest zone.	<i>Taphozous peli</i>
		African Chiroptera name	<i>Saccolaimus peli</i>
	b	FA less than 80; gular pouch in males only; rainforest and savanna zones.	22
22	a	FA 70 - 75; TLS 26 - 28; naked skin on ventral surface and rump.	<i>Taphozous nudiventris</i>
	b	FA not more than 70; TLS not more than 22; fully furred on ventral surface and rump.	23
23	a	FA 58 - 64; dorsal pelage speckled grey (salt-and-pepper effect); ventral pelage pure white; large gular pouch in males.....	<i>Taphozous mauritanus</i>
	b	FA 60 - 67; dorsal grey pelage greyish, not speckled; ventral pelage greyish or whitish; small gular pouch in males.....	<i>Taphozous perforatus</i>
24	a	Posterior lower premolar large, reaching above cingulum of anterior premolar and equal or almost equal to height of anterior cusp of first molar; obvious concavity on outer margin of tragus.....	25
	b	Posterior lower premolar very small, reaching approximately to cingulum of anterior premolar (Fig. 3.9); no obvious concavity on outer margin of tragus.....	26
25	a	FA 36 - 46; E 28 - 33.....	<i>Nycteris arge</i>
	b	FA 47 - 50; E 27 - 32.....	<i>Nycteris major</i>
26	a	Upper incisors trifid (Fig. 3.9).....	27
	b	Upper incisors bifid (Fig. 3.9).....	28
27	a	Forearm 36 - 45; E 18 - 25; rainforest and savanna zone.	<i>Nycteris hispida</i>
	b	FA 57 - 66; E 28 - 35; rainforest zone.	<i>Nycteris grandis</i>
28	a	TLS less than 20; posterior lower premolar extremely small and hardly visible; slight concavity on outer margin of tragus.	<i>Nycteris thebaica</i>
	b	TLS more than 20; posterior molar small but visible; no concavity on outer margin of tragus.....	<i>Nycteris macrotis</i>
29	a	FA more than 57; TLS at least 29; connecting process does not stand up above level of sella (Fig. 3.11).	<i>Rhinolophus maclaudi</i>
	b	FA less than 57; TLS less than 29; connecting process stands up above level of sella.	30
30	a	Connecting process rounded (Fig. 3.11).	31
	b	Connecting process pointed (Fig. 3.11).	32
31	a	FA 50 - 53; TLS 21 - 23.	<i>Rhinolophus fumigatus</i>
	b	FA 45 - 48; TLS about 19.....	<i>Rhinolophus alticolus</i>
		African Chiroptera name	<i>Rhinolophus simulator</i>
32	a	FA 38 - 45; TLS 17 - 20; savanna habitats.....	<i>Rhinolophus landeri</i>
	b	FA 49 - 54; TLS 22 - 34; rainforest habitats	<i>Rhinolophus alcyone</i>
33	a	Central nose-leaf and posterior nose-leaf each with club-like process; FA 62-71.	<i>Hipposideros cyclops</i>
	b	Nose-leaves without club-like processes.	34
34	a	Internarial septum enlarged with lateral lobes obscuring the nostrils; FA 50-55.	<i>Hipposideros jonesi</i>
	b	Internarial septum not enlarged, nostrils visible.	35
35	a	FA 98 or greater, TLS 34 or greater, E 28 - 32; frontal sac with longitudinal slit.	<i>Hipposideros commersoni</i>
	b	FA less than 98, TLS less than 54; frontal sac, if present, with horizontal slit.	36

- 36 a Three secondary leaflets on either side of anterior noseleaf; FA 59 - 64. *Hipposideros abae*
 b Two secondary leaflets on either side of anterior noseleaf; FA 41 - 52. 37
- 37 a FA 41-44. *Hipposideros beatus*
 b FA usually more than 44. 38
- 38 a FA 43-48. *Hipposideros caffer*
 b FA 48-52. *Hipposideros ruber*
- 39 a Second phalanx of third finger about three times as long as first phalanx (Fig. 3.4).
 *Miniopterus schreibersi*
 African Chiroptera name *Miniopterus schreibersi*
 b Second phalanx of third finger less than three times as long as the first phalanx... 40
- 40 a Pelage woolly; ear funnel-shaped; tragus long and straight, tapering to a slender point. *Kerivoula smithi*
 African Chiroptera name *Kerivoula smithi*
 b Pelage generally short, not woolly; tragus not long and straight, not tapering to a slender point. 41
- 41 a Six upper and six lower cheek teeth on each side of mouth. *Myotis bocagei*
 African Chiroptera name *Myotis bocagii*
 b Less than six upper and six lower cheek teeth on each side of mouth. 42
- 42 a Four upper incisor teeth. 43
 b Only two upper incisor teeth. 46
- 43 a Upper jaw with two premolars on each side (Genus *Pipistrellus*). 49
 b Upper jaw with one premolar on each side. 44
- 44 a Second phalanx of third finger longer than first phalanx; wings white with dark reticulation, or white markings on shoulders or on dorsal surface; nasal region very short (Genus *Glauconycteris*) 51
 b Second phalanx of third finger shorter than first phalanx; wings white or dark; no white markings on shoulders or on dorsal surface of body; nasal region not particularly short. 45
- 45 a Wings extremely narrow and small in relation to size of body; tragus short and blunt; skull flat and broad. *Mimetillus moloneyi*
 b Wings not extremely narrow; tragus not particularly short and blunt (Genus *Eptesicus*). 53
- 46 a FA not less than 40; tragus long and 'sickle-shaped'; skull with mid-dorsal ridge which can be felt on top of head (Genus *Scotophilus*) 57
 b FA less than 40; tragus rounded at tip; skull without mid-dorsal ridge. 47
- 47 a Upper canines with groove on anterior surface (Genus *Scotoecus*) 48
 b Upper canines without groove on anterior surface. *Nycticeius schlieffeni*
 African Chiroptera name *Nycticeinops schlieffenii*
- 48 a Wings white; ventral pelage dark, similar to dorsal pelage; FA 30 - 31. *Scotoecus albofuscus*
 b Wings dark; ventral pelage silvery-white; FA 34 - 35. *Scotoecus hindei*
- 49 a Ventral pelage pure white; inner upper incisor teeth deeply bifid; FA 32 - 34.
 *Pipistrellus rueppelli*
 African Chiroptera name *Pipistrellus rueppellii*
 b Ventral pelage dark or grey; inner upper incisor teeth not bifid or only slightly bifid; FA less than 32. 50
- 50 a Tragus 'hatchet-shaped'; dorsal hairs dark brown with golden-brown tips; FA 25 - 32.
 *Pipistrellus nanus*
 b Tragus 'sickle-shaped'; dorsal hairs reddish-brown; FA 25 - 31. *Pipistrellus nanulus*
- 51 a Wings and interfemoral membrane pale, with bold dark reticular pattern; FA 41-45.
 *Glauconycteris variegata*
 b Wings dark, without reticular pattern; FA less than 41. 52
- 52 a Pelage grey or brownish-grey, with white shoulder spot and white lateral spot or line on each side of body; tragus short and broad. *Glauconycteris poensis*
 b Pelage dark brown or rufous-brown, without white markings except for white tuft on each shoulder; tragus long and narrow. *Glauconycteris beatrix*
- 53 a Wings white or translucent. 54
 b Wings dark. 56
- 54 a Wings very pale, contrasting with blackish-brown dorsal pelage; FA less than 32.

- *Eptesicus tenuipinnis*
 African Chiroptera name *Neoromicia tenuipinnis*
- b Wings pale, not contrasting so definitely with light-buff to dark brown dorsal pelage;
 FA usually more than 32..... 55
- 55 a Dorsal pelage dark brown to reddish-brown; ventral pelage grey, incisor teeth without
 hook on posterior surface..... *Eptesicus brunneus*
 African Chiroptera name *Neoromicia brunneus*
- b Dorsal pelage light buff to fawny-brown; ventral pelage light grey; anal region white;
 upper incisor teeth with hook on posterior surface. *Eptesicus rendalli*
 African Chiroptera name *Neoromicia rendalli*
- 56 a FA more than 45; HB 60 - 75. *Eptesicus platyops*
 b FA less than 45; HB 30 - 45. *Eptesicus capensis* group (including *Eptesicus somailcus*
 and *Eptesicus pusillus*)
- 57 a FA 80 - 88; TLS 31 - 34. *Scotophilus nigrita*
 (This should be *Scotophilus dinganii*. See Robbins (1978))
 African Chiroptera name *Scotophilus dinganii*
- b FA less than 80; TLS less than 31. 58
- 58 a FA 41 - 47; WT14 - 18; ventral pelage yellow to pale buffy-brown, never white;
 savanna zones. *Scotophilus viridis*
- b FA 49 - 57; WT 16 - 30; ventral pelage varying shades of yellow, greyish-white or
 white; rainforest or savanna zones..... 59
- 59 a FA about 55; WT about 30; dorsal pelage dark orange-brown; rainforest zone.
 *Scotophilus nux*
- b FA 49 - 57; WT usually 16 - 27; dorsal pelage brown to greyish-brown; rainforest and
 savanna zones. 60
- 60 a FA 49 - 57; WT 16 - 27; ventral pelage bright yellow, yellowish orange or pale yellow;
 rainforest and savanna zones. *Scotophilus dinganii*
- b FA 49 - 54, WT 16 - 20; ventral pelage greyish-white to white, never yellowish;
 savanna zones. *Scotophilus leucogaster*
- 61 a Tragus large, longer than antitragus and not concealed by antitragus; ears white or
 translucent, well separated and not connected by flap of skin; FA not more than 37;
 upper Incisors In contact at their bases..... *Myopterus whitleyi*
- b Tragus small concealed by antitragus (except in *Tadarida aegyptiaca*); ears not
 translucent, connected by flap of skin or at least very close together; FA 27 - 66; upper
 incisors clearly separated..... 62
- 62 a FA 27 - 31. *Tadarida nanula*
 African Chiroptera name *Mops (Xiphonycteris) nanulus*
- b FA more than 31. 63
- 63 a FA less than 43..... 64
 b FA more than 43 66
- 64 a Dorsal pelage blackish-brown; white or pale hairs on ventral surface where wings join
 flanks; mainly savanna zones. *Tadarida pumila*
 African Chiroptera name *Chaerephon pumilus*
- b Dorsal pelage dark brown or orange-brown; no white hairs on ventral surface where
 wings join flanks; rainforest zone. 65
- 65 a FA 35 - 38; dorsal pelage orange-brown to reddish-brown; flanks brownish. *Tadarida*
leonis
 African Chiroptera name *Mops (Xiphonycteris) brachypterus*
- b FA 38 - 41; dorsal pelage rich dark brown with band of black naked skin adjacent to
 wings and on rump..... *Tadarida thersites*
 African Chiroptera name *Mops (Xiphonycteris) thersites*
- 66 a FA less than 50..... 65
 b FA more than 50. 68
- 67 a Dorsal and ventral pelage dark brown, with band of long pure white hairs on ventral
 surface where wings join body; ears with particularly large flap of skin joining inner
 surfaces of ears; tuft of thickened hairs on top of head. *Tadarida nigeriae*
 African Chiroptera name *Chaerephon nigeriae*
- b Dorsal pelage reddish-brown, ventral pelage usually greyish with band of white hairs
 where wings join body; ears without particularly large flap of skin joining inner surfaces
 of ears; no tuft of thickened hairs on top of head. *Tadarida condylura*

-
- 68 a African Chiroptera name *Mops (Mops) condylurus*
 FA 60 - 66. *Tadarida midas*
 African Chiroptera name *Mops (Mops) midas*
- b FA less than 60. 69
- 69 a Tragus well-developed, not obscured by antitragus; FA 44 - 53; savanna habitats.
 *Tadarida aegyptiaca*
- b Tragus small, concealed by antitragus; FA 55 - 57; rainforest habitats. *Tadarida congica*
 African Chiroptera name *Mops (Mops) congicus*

Appendix 5t: Boulay and Robbins (1989). *Epomophorus gambianus*

- 1 a Single strong transverse palatal ridge between last molars and upturned posterior edge of bony palate (bony support usually evident even if ridge cleaned of tissue); one postdental palatal ridge, length of forearm 72 to 95 (males) 68 to 88 (females) *Epomophorus wahlbergi*
- b Two weaker transverse parallel palatal ridges between last molars and upturned posterior edge of bony palate (bony supports faint if bony palate cleaned); two postdental fleshy palatal ridges 2
- 2 a Second to fourth fleshy palatal ridge divided in the middle; length of forearm 62.3 to 62.8 (males), 65.8 (females) *Epomophorus grandis*
- b Second to fourth fleshy palatal ridges undivided 3
- 3 a Fourth fleshy palatal ridge nearer third than fifth; western Angola, north-western Namibia *Epomophorus angolensis*
- b Fourth fleshy palatal ridge midway between third and fifth 4
- 4 a Condylbasal length 51.1 to 63.6 (males), 45.0 to 56.1 (females) *Epomophorus gambianus*
- b Condylbasal length less than 50 (males), 45 (females) 5
- 5 a Condylbasal length 40.0 to 48.4 (males), 37.0 to 43.9 (females) *Epomophorus labiatus*
African Chiroptera name *Epomophorus labiatus minor*
- b Condylbasal length usually less than 40 (33.0 to 40.8 in males and 31.0 to 39.0 in females) *Epomophorus minor*
African Chiroptera name *Epomophorus labiatus minor*

Appendix 5u: Happold and Happold (1989). The bats (Chiroptera) or Malawi, Central Africa: Checklist and keys for identification

- 1 a Second finger terminating in claw (Fig. 1); ear conch forms complete ring around external ear opening (Fig. 2a); tragus absent; tail absent or very small (Fig. 3a); interfemoral membrane poorly developed (Fig. 3a); no nose-leaves or fleshy outgrowths on nasal region or forehead; large eyes; cheek-teeth simple without well-developed cusps (Fig. 4) (Suborder Megachiroptera) 2
- b Second finger without terminal claw; inner and outer margins of ear conch arise at different points and are not joined at base; tragus usually present (Fig. 2b-h); tail long and interfemoral membrane well-developed in most families (Fig. 3) except Megadermatidae (Fig. 3d); nose-leaves or fleshy outgrowths present in some families (Fig. 2); eyes small and obscure; cheek-teeth with well-developed cusps (Suborder Microchiroptera) 7
- 2 a No white tufts at base of ears; five upper cheek-teeth 3
- b Conspicuous white tuft at the base of each ear (Fig. 2a); three upper cheek-teeth (Fig. 4) 4
- 3 a Forearm usually > 100 mm (110 - 130) *Eidolon helvum*
- b Forearm usually < 100 mm (80 - 105) *Rousettus aegyptiacus*
- 4 a Five prominent palatal ridges *Epomops dobsoni*
African Chiroptera name *Epomops dobsonii*
- b Six prominent palatal ridges (Fig. 4) 5
- 5 a One post-dental palatal ridge *Epomophorus wahlbergi*
- b Two post-dental palatal ridges 6
- 6 a Forearm adult male 61 - 69 mm (mean 64), adult female 58 - 64 mm (mean 61); head adult male 41 - 44 mm (mean 42), adult female 35 - 39 mm (mean 37) [but see text] *Epomophorus minor*
African Chiroptera name *Epomophorus labiatus minor*
- b Forearm adult male 80 - 86 mm (mean 83), adult female 68 - 79 mm (mean 71); head adult male 52 - 59 mm (mean 54), adult female 37 - 49 (mean 40) [but see text] *Epomophorus crypturus*
African Chiroptera name *Epomophorus gambianus crypturus*
- 7 a No visible tail (Fig 3d) (Family Megadermatidae) *Lavia frons*
- b Tail long and easily visible 8
- 8 a Part of tail free of the interfemoral membrane 9
- b Tail entirely enclosed in the interfemoral membrane 10
- 9 a Free portion of tail emerges upwards near centre of the interfemoral membrane (Fig. 3b) (Family Emballonuridae) 13
- b Free portion of tail emerges at hind margin of the interfemoral membrane (Fig. 3h) (Family Molossidae) 56
- 10 a Face simple without nose-leaves (Fig. 2g) (Family Vespertilionidae) 30
- b Face with nose-leaves (Fig. 2c-f) 11
- 11 a Face with deep slit from nostrils to forehead, bordered by nose-leaves (Fig. 2c); tragus present; tail ends in characteristic Y-shaped cartilage (Fig. 3c) (Family Nycteridae) 15
- b Face without deep slit from nostrils to forehead; nose-leaves flattish, covering whole of nasal region; tragus absent or very small; tail does not end in Y-shaped cartilage 12
- 12 a Posterior leaflet of nose-leaf triangular, with an erect fleshy point called a sella (Figs. 2e & 6a); three bones in each toe (Family Rhinolophidae) 19
- b Posterior leaflet of nose-leaf elliptical or tridentate, without a sella (Figs. 2f & 7); two bones in each toe (Family Hipposideridae) 26
- 13 a Forearm < 55 mm *Coleura afro*
- b Forearm > 55 mm 14
- 14 a Forearm 58 - 64 mm (mean 62); dorsal pelage grizzled dark and pale grey (salt-and-pepper effect); ventral pelage pure white; large gular pouch in males *Taphozous mauritanus*
- b Forearm 60 - 67 mm; dorsal pelage grey, not grizzled; ventral pelage greyish or whitish but not pure white; no gular pouch in males *Taphozous perforatus*
- 15 a Upper incisors bifid (Fig. 5a) 16
- b Upper incisors trifid (Fig. 5b) 18
- 16 a Tragus semi-lunate, base of its posterior margin not notched (Fig. 5c) 17

	b	Tragus pyriform, base of its posterior margin with a distinct notch (Fig. 5d) ... <i>Nycteris thebaica</i>	
17	a	Forearm 37 - 42 mm, pelage greyish	<i>Nycteris woodi</i>
	b	Forearm 45 - 54 mm (mean 52), pelage brownish	<i>Nycteris macrotis</i>
18	a	Forearm 36 - 45 mm; ear 18 - 25 mm	<i>Nycteris hispida</i>
	b	Forearm 57 - 67 mm (mean 64); ear 26 - 35 mm	<i>Nycteris grandis</i>
19	a	Connecting process pointed (Fig. 6b)	20
	b	Connecting process rounded (Fig. 6c-e)	21
20	a	Ratio of first phalanx of the fourth finger to the metacarpal 1:3.5 (range 3.1 - 3.9) (see Fig. 1); sella wedge-shaped	<i>Rhinolophus blasii</i>
	b	Ratio of first phalanx of the fourth finger to the metacarpal 1:4.9 (range 4.3 - 5.6) (see Fig. 1); sella with parallel sides	<i>Rhinolophus landeri</i>
21	a	Horseshoe wider than 9 mm; sella with abundant long hairs (examine under magnifying glass)	22
	b	Horseshoe usually < 9 mm; sella naked or with very few hairs (examine under magnifying glass)	23
22	a	Forearm 60 - 70 mm (mean 63); horseshoe 12 - 15 mm (mean 14)	<i>Rhinolophus hildebrandtii</i>
	b	Forearm 45 - 55 mm (mean: male 49, female 52); horseshoe 9 - 12 mm (mean 10)	<i>Rhinolophus fumigatus</i>
23	a	Forearm 50 - 57 mm (mean 53); connecting process high and rounded (Fig. 6d)	<i>Rhinolophus clivus</i>
	b	Forearm < 50 mm; connecting process low and rounded (Fig. 6e)	24
24	a	Anterior upper premolar in toothrow, upper canine not in contact with posterior upper premolar (Fig. 6f); forearm 40 - 46 mm	25
	b	Anterior upper premolar external to toothrow, upper canine in contact with posterior upper premolar (Fig. 6g); forearm 43 - 50 mm	<i>Rhinolophus darlingi</i>
25	a	Forearm 40 - 46 mm (mean 45); sella broad	<i>Rhinolophus simulator</i>
	b	Forearm 40 - 46 mm; sella narrow	<i>Rhinolophus swinyi</i>
26	a	Posterior leaflet on nose-leaf elliptical (Fig. 7a)	27
	b	Posterior leaflet on nose-leaf tridentate (Fig. 7b)	29
27	a	Forearm 79 - 115 mm	<i>Hipposideros commersoni</i>
	b	Forearm < 60 mm	28
28	a	Forearm 42 - 50 mm (mean 47); pelage either grey or pale orange; median posterior nasal compartment narrow with wide lateral inflations	<i>Hipposideros caffer</i>
	b	Forearm 48 - 54 mm; pelage either grey-brown or rufous; median posterior nasal compartment wide with narrow lateral inflations	<i>Hipposideros ruber</i>
29	a	Forearm 50 - 55 mm; nose-leaf conspicuous	<i>Triaenops persicus</i>
	b	Forearm 31 - 39 mm; nose-leaf inconspicuous	<i>Cloeotis percivali</i>
30	a	Second phalanx of third finger about three times as long as the first phalanx (Genus <i>Miniopterus</i>)	55
	b	Second phalanx of third finger approximately as long as the first	31
31	a	Ears funnel-shaped, with deep emargination below tip; tragus long, narrow and tapering to a slender point (Fig. 8m); pelage woolly (Genus <i>Kerivoula</i>)	54
	b	Ears not funnel-shaped; ears without deep emargination below tip; tragus short and broad or long and narrow but not tapering to a slender point (Fig. 8); pelage not woolly	32
32	a	Six upper cheek-teeth on each side (Fig. 9a) (Genus <i>Myotis</i>)	39
	b	Four or five upper cheek-teeth on each side (Fig. 9b-d)	33
33	a	Two upper incisors on each side (Fig. 9c)	34
	b	One upper incisor on each side (Fig. 9d)	37
34	a	Five upper cheek-teeth on each side (Fig. 9b) (Genus <i>Pipistrellus</i>)	43
	b	Four upper cheek-teeth on each side (Fig. 9c-d)	35
35	a	Ear 18 mm or more, about half length of forearm (Genus <i>Laephotis</i>)	<i>Laephotis botswanae</i>
	b	Ear < 18 mm, much less than half length of forearm	36
36	a	Lower lip with lobe at posterior angle; forearm 39 - 45 mm; nasal region very short and broad; wing membranes reticulated or not reticulated (Genus <i>Glauconycteris</i>)	51
	b	Lower lip without lobe at posterior angle; forearm 29 - 53 mm; nasal region not very short and broad; wings without (Genus <i>Eptesicus</i>)	46

37	a	Forearm 42 - 88 mm (Genus <i>Scotophilus</i>)	52
	b	Forearm 28 - 38 mm	38
38	a	Upper canine with rounded anterior face and no groove; penis not elongated, about 9 mm; forearm 29 - 33 mm (mean 31); four upper cheek-teeth on each side (Genus <i>Nycticeus</i>).....	<i>Nycticeus schlieffenii</i>
		African Chiroptera name	<i>Nycticeinops schlieffenii</i>
	b	Upper canine with broad flat anterior surface and a shallow groove; penis greatly elongated (14 mm in some specimens); forearm 28 - 38 mm; four or five upper cheek-teeth on each side (Genus <i>Scotoecus</i>)	41
39	a	Forearm 52 - 60 mm; very conspicuous pattern of orange-red and black markings on wings and interfemoral membrane	<i>Myotis welwitschii</i>
	b	Forearm 36 - 52 mm; wings and interfemoral membrane with faint markings or no markings	40
40	a	Forearm 47 - 52 mm (mean 49)	<i>Myotis tricolor</i>
	b	Forearm 36 - 42 mm (mean 39)	<i>Myotis bocagei</i>
		African Chiroptera name	<i>Myotis bocagii</i>
41	a	Wings white with brown edges; ventral pelage brown	<i>Scotoecus albofuscus</i>
	b	Wings dark brown; ventral pelage greyish-white	42
42	a	Greatest length of skull 13.5 - 15 mm; canine and cheek-teeth comparatively massive; c ¹ -c ¹ (alveoli) about 5.6 mm, (cingula) about 5.7 mm; m ³ -m ³ about 8.0 mm; c ¹ -m ³ about 6.1 mm; length of mandible about 11.5 mm.....	<i>Scotoecus albigula</i>
	b	Greatest length of skull 15.3 - 15.5 mm; canine and cheek-teeth less massive; c ¹ -c ¹ (alveoli) about 5.2 mm, (cingula) about 5.3 mm; m ³ -m ³ about 7.2 mm; c ¹ -m ³ about 5.4 mm; length of mandible about 10.3 mm	<i>Scotoecus hindei</i>
43	a	Ventral pelage pure white	<i>Pipistrellus rueppellii</i>
	b	Ventral pelage brown	44
44	a	Tragus hatchet-shaped with sharp angle on posterior border (Fig. 8e); commonly roosts in furled banana leaves	<i>Pipistrellus nanus</i>
	b	Tragus not hatched-shaped, without sharp angle on posterior border (Fig. 8f-g); not known to roost in furled banana leaves.....	45
45	a	Forearm 30 - 37 mm (mean 35); head 15.0 - 16.5 mm (mean 15.9); total length of skull more than 12 mm; forehead slightly concave; tragus as in Fig. 8f.....	<i>Pipistrellus kuhlii</i>
	b	Forearm 27 - 34 mm (mean 32); head 14.0 - 16.0 mm (mean 15.0); total length of skull 12 mm or less; forehead flat; tragus as in Fig. 8g	<i>Pipistrellus rusticus</i>
46	a	Wings white or translucent	<i>Eptesicus rendalli</i>
		African Chiroptera name	<i>Neoromicia rendalli</i>
	b	Wings with dark brown or black pigmentation	47
47	a	Forearm 44 - 53 mm	<i>Eptesicus hottentotus</i>
	b	Forearm < 40 mm	48
48	a	Forearm 34 - 38 mm	<i>Eptesicus melckorum</i>
		African Chiroptera name	<i>Neoromicia melckorum</i>
	b	Forearm 35 mm or less.....	49
49	a	Cranial portion of skull elevated above rostrum; forearm 29 - 32 mm (mean 31)	<i>Eptesicus zuluensis</i>
		African Chiroptera name	<i>Neoromicia zuluensis</i>
	b	Cranial portion of skull note elevated above rostrum; forearm 29 - 35 mm	50
50	a	Skull with posterior occipital "helmet"; forearm 29 - 35 mm (mean 32).....	<i>Eptesicus capensis</i>
		African Chiroptera name	<i>Neoromicia capensis</i>
	b	Skull without posterior occipital "helmet"; forearm 30 - 32 mm.....	<i>Eptesicus somalicus</i>
		African Chiroptera name	<i>Neoromicia somalicus</i>
51	a	Wings and interfemoral membrane conspicuously reticulated by pigmentation of the veins and therefore having a pattern of dark lines on a pale background	<i>Glauconycteris variegata</i>
	b	Wings and interfemoral membrane not reticulated and therefore without a pattern	<i>Glauconycteris argentata</i>
52	a	Forearm 77 - 88 mm	<i>Scotophilus nigrita</i>
	b	Forearm 42 - 65 mm	53
53	a	Forearm 48 - 60 mm (mean 55); head 23 - 26 mm (mean 25); tragus 9.0 - 10.5 mm (mean 9.6)	<i>Scotophilus dinganii</i>

- b Forearm 42 - 52 mm (mean 48); head 17 - 23 mm (mean 21); tragus 8.0 - 9.0 mm (mean 8.3) *Scotophilus viridis*
- 54 a Forearm 34 - 41 mm; total length skull 15 mm or more; dorsal pelage bright reddish-chestnut *Kerivoula argentata*
- b Forearm 30 - 32 mm; total length skull 13.5 mm or less; dorsal pelage brown, grey-brown or dull buffy *Kerivoula harrisoni*
- African Chiroptera name *Kerivoula lanosa*
- 55 a Forearm 42 - 45 mm, skull about 14 mm *Miniopterus fraterculus*
- b Forearm 42 - 47 mm, skull about 15 mm *Miniopterus schreibersii*
- 56 a Forearm 62 - 73 mm; ear 38 - 40 mm; ears joined together and joined to snout *Otomops martiensseni*
- b Forearm 34 - 66 mm; ear 30 mm or less; ears either joined or not joined together, but not joined to snout 57
- 57 a Forearm > 55 mm 58
- b Forearm < 55 mm 60
- 58 a Ears joined together at base; m reduced, cusps forming V pattern (Fig. 10a) *Tadarida midas*
African Chiroptera name *Mops (Mops) midas*
- b Ears not joined together; m not reduced; cusps forming N pattern (Fig. 10b) 59
- 59 a Forearm 57 - 62 mm; total length skull 22.0 - 22.9 mm *Tadarida fulminans*
- b Forearm 60 - 67 mm; total length skull 23.5 - 25.7 mm *Tadarida ventralis*
- 60 a Forearm 43 - 53 mm 61
- b Forearm 34 - 42 mm 64
- 61 a Ventral pelage with white, off-white or very pale grey-brown area, especially on abdominal region; dorsal pelage conspicuously darker than ventral pelage; m reduced, cusps forming V pattern (Fig. 10a) 62
- b Ventral pelage usually dark brown, sometimes tinged with grey; dorsal pelage usually same as ventral pelage or only slightly darker (in *T. aegyptiaca*, some individuals have off-white and pale grey-brown ventral pelage); m not reduced, cusps forming N or W pattern (Fig. 10b-c) 63
- 62 a Crown of head darker than back; skull with sagittal crest low or absent; third commissure of m obsolete *Tadarida niveiventer*
African Chiroptera name *Mops (Mops) niveiventer*
- b Crown of head same colour as back; skull with well-developed sagittal crest; third commissure of m present although reduced *Tadarida condylura*
African Chiroptera name *Mops (Mops) condylurus*
- 63 a Ears joined at base; pattern of white spots or short stripe on crown of head and sometimes on shoulders and flanks *Tadarida bivittata*
African Chiroptera name *Chaerephon bivittatus*
- b Ears separate; no white spots or striped on crown of head, shoulders or flanks *Tadarida aegyptiaca*
- 64 a Males with long (13 - 14 mm) bicoloured post-aural crest with basal half of hairs reddish-brown, remainder white; forearm 34 - 39 mm *Tadarida chapini*
African Chiroptera name *Chaerephon chapini*
- b Males with short (10 mm or less) unicoloured post-aural crest; forearm 36 - 42 mm (mean 38) *Tadarida pumila*
African Chiroptera name *Chaerephon pumilus*

Appendix 5v: Kowalski and Rzebik-Kowalska (1991). Mammals of Algeria.

- 1 a Tail with terminal portion free, emerging from upper surface of interfemoral membrane (Family Emballonuridae)..... *Taphozous nudiventris*
 b Tail enclosed within interfemoral membrane or projecting from its margin..... 2
- 2 a Free portion of tail very slender, much longer than interfemoral membrane (Family Rhinopomatidae)..... *Rhinopoma hardwicki*
 African Chiroptera name *Rhinopoma hardwickii*
 b Free portion of tail stout, not longer than interfemoral membrane or tail enclosed within membrane..... 3
- 3 a Complicated skin folds including a nose-leaf present around the nose (Family Rhinolophidae)..... 4
 b Muzzle without skin folds. 10
- 4 a Tail protruding from the membrane for more than 3 mm. *Asellia tridens*
 b Tail entirely enclosed within interfemoral membrane (Genus *Rhinolophus*)..... 5
- 5 a Large, forearm usually more than 53 mm long. Noseleaf with superior connecting process of sella blunt in side view. *Rhinolophus ferrumequinum*
 b Size medium or small, forearm usually less than 53 mm long. Noseleaf with superior connecting process of sella blunt or pointed in side view. 6
- 6 a Small, forearm less than 40 mm long. Noseleaf with superior connecting process blunt in side view, its base projecting prominently forwards. *Rhinolophus hipposideros*
 b Medium size, forearm between 43 and 53 mm long..... 7
- 7 a Noseleaf with superior connecting process of sella pointed in side view. Small: forearm usually 43-49 mm long..... 8
 b Noseleaf with superior connecting process of sella blunt in side view. Large: forearm usually 48-53 mm long. 9
- 8 a First phalanx of fourth finger more than half as long as the second. *Rhinolophus blasii*
 b First phalanx of fourth finger less than half as long as second. .. *Rhinolophus euryale*
- 9 a First phalanx of fourth finger more than half as long as the second. *Rhinolophus clivosus*
 b First phalanx of fourth finger less than half as long as second. .. *Rhinolophus mehelyi*
- 10 a About half of tail free, projecting beyond posterior edge of narrow interfemoral membrane (Family Molossidae)..... 11
 b Tail entirely enclosed in interfemoral membrane or only its tip protruding from it (Family Vespertilionidae)..... 12
- 11 a Large, forearm more than 54 mm long. Three pairs of lower incisors. *Tadarida teniotis*
 b Small, forearm less than 54 mm long. Two pairs of lower incisors. *Tadarida aegyptiaca*
- 12 a One pair of upper incisors. Ears very large. *Otonycteris hemprichi*
 African Chiroptera name *Otonycteris hemprichii*
 b Two pairs of upper incisors. 13
- 13 a Three pairs of premolars in upper jaws (Genus *Myotis*)..... 14
 b One or two pairs of premolars in upper jaws. 17
- 14 a Large, forearm more than 50 mm long. *Myotis blythi*
 African Chiroptera name *Myotis blythii*
 b Small, forearm less than 45 mm long..... 15
- 15 a Hind foot very large, three-quarters length of tibia. *Myotis capaccinii*
 b Hind foot smaller, about half length of tibia. 16
- 16 a Posterior edge of ear conspicuously indented above half its length. Posterior margin of interfemoral membrane with single soft hair..... *Myotis emarginatus*
 b Posterior edge of ear with slight indentation. Posterior margin of interfemoral membrane covered with stiff, curved hair..... *Myotis nattereri*
- 17 a Ears very large, about 35 mm long, joined across the forehead... *Plecotus austriacus*
 b Ears not very large, widely separated from each other. 18
- 18 a Three pairs of lower premolars. Terminal portion of unspanned wings curves inward. *Miniopterus schreibersii*
 African Chiroptera name *Miniopterus schreibersii*
 b Two pairs of lower premolars. Terminal portion of unspanned wing does not curve inward. 19
- 19 a One pair of upper premolars. *Eptesicus serotinus*

	b	Two pairs of upper premolars.	20
20	a	Large, forearm more than 40 mm long. Wings narrow (Genus <i>Nyctalus</i>).	21
	b	Small, forearm less than 37 mm long. Wings broad (Genus <i>Pipistrellus</i>).	22
21	a	Forearm more than 50 mm long.	<i>Nyctalus noctula</i>
	b	Forearm less than 46 mm long.	<i>Nyctalus leisleri</i>
22	a	First upper incisor unicuspid.	<i>Pipistrellus savii</i>
		African Chiroptera name	<i>Hypsugo savii</i>
	b	First upper incisor bicuspid.	23
23	a	Wing membrane with white margin.	24
	b	Wing membrane without white margin.	25
24	a	LC-M ³ more than 4.5 mm. Forearm 31-36 mm.	<i>Pipistrellus kuhlii</i>
	b	LC-M ³ less than 4.5 mm. Forearm 29-33 mm.	<i>Pipistrellus deserti</i>
25	a	Ventral fur white.	<i>Pipistrellus rueppellii</i>
		African Chiroptera name	<i>Pipistrellus rueppellii</i>
	b	Ventral fur brown.	<i>Pipistrellus pipistrellus</i>

Appendix 5w: Peterson et al. (1995). Faune de Madagascar: Chiroptères

- 1 a Seconde phalange du troisième doigt à peu près trois fois plus longue que la première. Boîte crânienne haute et ronde (genus *Miniopterus*)..... 5
 b Seconde phalange du troisième doigt pas particulièrement longue 2
- 2 a Six dents génales (1), haut et bas, de chaque côté *Myotis*
 b Moins de six dents génales, haut et bas, de chaque côté 3
- 3 a Cinq dents génales, haut et bas, de chaque côté. Deux incisives supérieures de chaque côté *Pipistrellus*
 b Quatre dents génales supérieures et cinq dents génales inférieures de chaque côté 4
- 4 a Deux incisives supérieures de chaque côté *Eptesicus*
 b Une incisive supérieure de chaque côté *Scotophilus*
- 5 a Avant-bras mesurant plus de 46 mm (X = 48.4; 46.7-49.9) plus grande longueur de la tête dépassant 16.0 mm (X = 16.7; 16.1-17.0) *Miniopterus gleni*
 b Avant-bras en général de moins de 46 mm; plus grande longueur de la tête inférieure à 16.0 mm en général 6
- 6 a Avant-bras de plus de 40 mm 7
 b Avant-bras de moins de 40 mm *Miniopterus manavi*
- 7 a Plus grande longueur du crâne pas inférieure à 15.0 mm (X = 15.5; 15.0-16.1). Avant bras X = 44.2 (41.8-46.6); M³-M³: X 6.5 (6.3-6.8) *Miniopterus majori*
 b Plus grande longueur du crâne en général inférieure à 15.0 mm (X = 14.8; 14.5-15.1). Avant-bras X = 42.8 (40.7 - 44.4). M³-M³: X 5.9 (5.7-6.0) ... *Miniopterus fraterculus*
- 8 a Oreilles simples et séparées par un espace à leur base 9
 b Oreilles naissant à peu près au même point ou réunies au-dessus du front 16
- 9 a Palais échancré en avant; antitragus bas ou indistinct et plus large que long; fossettes du basisphénoïde absentes ou peu développées ; troisième commissure de M³ égale ou plus longue que la seconde 10
 b Palais non échancré en avant; antitragus bien développé, en général plus haut que large 12
- 10 a Crâne très plat et large 11
 b Crâne pas très plat; deux ou trois paires d'incisives inférieures une ou deux prémolaires supérieures *Mormopterus*
- 11 a Avant-bras à granulations verruqueuses; glande gulaire avec des poils internes bien développés; une prémolaire supérieure; échancrure antérieure du palais étroite; processus lacrymal du rostre très large *Platymops*
 b Avant-bras lisse; glande gulaire différente; rostre à naseaux développés et ouverture nasale courte; deux prémolaires supérieures; échancrure palatale antérieure large; processus lacrymal du rostre relativement étroit *Sauromys*
- 12 a Crâne et corps massifs; pelage absent sur presque tout le corps; pas de fossettes basisphénoïdiennes; une paire d'incisives inférieures et de prémolaires supérieures *Cheiromeles*
 b Crâne et corps non massifs; pelage normal 13
- 13 a Fossettes du basisphénoïde profondes et bien développées; une paire d'incisives inférieures et de prémolaires supérieures *Myopterus*
 b Fossettes du basisphénoïde absentes ou peu développées; une ou deux paires d'incisives et de prémolaires supérieures 14
- 14 a Crâne aplati; troisième commissure de M³ bien développée; deux paires d'incisives inférieures et de prémolaires supérieures; fossettes du basisphénoïde superficielles, mais bien marquées et circulaires ; incisives supérieures nettement écartées; mandibule à branche ascendante élevée et angle en cylindre allongé ; lèvres à rides ; avant-bras à granulations verruqueuses *Neoplatymops*
 b Crâne pas aplati ; incisives supérieures contiguës; deux prémolaires supérieures; une ou deux incisives inférieures; pas de fossettes basisphénoïdiennes, ou fossettes indistinctes, ou de contour elliptique; mandibule à branche ascendante plus basse et angle largement tronqué; lèvres lisses; avant-bras normal, sans granulations verruqueuses 15
- 15 a Une paire d'incisives inférieures, troisième commissure de M³ bien développée, à peu près égale à la moitié de la seconde palais nettement en dôme ; secondes phalanges des 3ème et 4ème doigts égales ou plus longues que la première ; oreilles à sommet allongé et pointu, unies à la tête par un pli mobile *Molossops*

- b Deux paires d'incisives inférieures ; troisième commissure de M³ très réduite; fossettes du basisphénoïde absentes ou indistinctement ovalaires (pas elliptiques); palais pas nettement bombé ; seconde phalange des troisième et quatrième doigts bien plus courts que la première; oreille à sommet arrondi et obtus sans pli mobile l'unissant à la tête *Cynomops*
- 16 a Oreilles longues, soudées à la base; pas d'antitragus; zygoma à saillie dorsale élevée; crâne allongé et relativement étroit; fossettes du basisphénoïde très profondes et grandes *Otomops*
- b Oreilles, zygoma et fossettes du basisphénoïde différents 17
- 17 a Crâne relativement épais et court à crête sagittale nette; lèvres lisses; oreilles relativement courtes; naissant à peu près au même point 18
- b Crâne ni épais, ni court; antitragus relativement grand; fossettes du basisphénoïde en général développées mais de taille et de forme variables; partie antérieure du palais ou fermée ou échancrée; troisième commissure de M³ variable; deux ou trois paires d'incisives inférieures *Eumops et/ou Tadarida*
- 18 a Deux paires de prémolaires supérieures; palais fortement bombé..... *Promops*
- b Une paire de prémolaires supérieures ; palais non fortement bombé *Molossus*

Appendix 5x: Bergmans (1997). Taxonomy and biogeography of African fruit bats (Mammalia, Megachiroptera).5. The genera Lissonycteris Andersen, 1912, Myonycteris Matschie, 1899 and megaloglossus Pagenstecher, 1.885; General remarks and conclusions; Annex: Key to all species

- 1 a Facial fur with contrastingly white patches on nose and behind eyes, and/or at anterior and posterior ear bases; three upper and live lower cheek teeth (in one species four or five upper, and five to six lower cheek teeth) 2
- b No white facial fur patches or tufts at ear bases; five upper and six (in one species five) lower cheek teeth 18
- 2 a White fur patches on nose and behind eyes; in one species, white fur tufts also at ear bases 3
- b White fur tufts at ear bases only 5
- 3 a Cheeks and lips conspicuously white; ear tips rather rounded; Fa MM 49 -55, FF 54 - 64; weight MM 26, FF 28 - 34; finger joints contrastingly yellow; canines simple; forests of Cameroun and Zaïre *Casinycteris argynnus*
- b Cheeks and lips not conspicuously white; ears tips either rounded or slightly pointed; finger joints dark and Fa under 57, or finger joints contrastingly coloured and Fa over 70; canines simple or with extra cusp 4
- 4 a Finger joints as dark as wing membranes; ear tips rounded; Fa MM 45 - 55, FF 47 - 57; weight MM 16 - 24, FF 18 - 27; canines simple; forests of Liberia to East Zalre (discontinuous) *Scotonycteris zenkeri*
- b Finger joints whitish or yellowish; ears slightly pointed; Fa MM 74 - 79, FF 75 - 88; weight MM 65 - 71, FF 65 - 95; canines with second, inner cusp; locally in forests of Liberia, Ghana, Cameroun and Congo *Scotonycteris ophiodon*
- 5 a White ear base tufts not very distinct; anterior end of muzzle truncated and with a fleshy plate (fig. 1); Fa MM 120 - 139, FF 111 - 128; weight MM 290 - 420, FF 207 - 302; no white shoulder tufts; forests, sometimes woodlands, of Sierra Leone to Uganda, southwards to Angola *Hypsignathus monstrosus*
- b White ear base tufts conspicuous; muzzle simple (fig. 2); Fa under 105; adult males with retractable white shoulder tufts (not known for Plerotes) 6
- 6 a Interfemoral membrane extremely narrow; calcar absent; cheek teeth reduced in height and width and variable in number: Four or five upper and five or six lower cheek teeth; woodlands of Angola, South Zaire, North Zambia; Fa 1 M 50, 2 FF 50 - 52.5; weight not known *Plerotes anchietae*
- b Interfemoral membrane relatively well developed (fig. 3); calcar present; cheek teeth not much reduced; three upper and five lower cheek teeth (very incidentally rudimentary extra teeth); Fa range variable 7
- 7 a Three thick palatal ridges in front, followed by five to eight thinner ridges (figs. 4-5); Fa over 75 8
- b Five to nine thick ridges, followed by two to four thinner ridges; Fa variable 9
- 8 a Third ridge normally whole; thin ridges rather narrowly divided medially (posterior ones whole) and finely serrate (fig. 4); Fa MM 83 - 101, FF 76 - 97; weight MM 92 - 172, FF 61 - 130; Sierra Leone, eastern Ivory Coast to Uganda, southwards to Angola and Zambia *Epomops franqueti*
- b Third ridge normally divided medially; first four or five thin ridges clearly divided medially, irregularly serrate, each half generally with one large central projection pointing forward (5); posterior thin ridges undivided and more evenly serrated; Fa MM 88 - 103, FF 82 - 95; weight MM 133 - 198, FF 94-132; Guinea to Ghana, locally in Nigeria *Epomops buettikoferi*
- 9 a Five thick palatal ridges; second ridge wide and indistinctly bifurcate at its extremities; fourth and fifth postdental, each with two large projections, often triangular and pointing forward; three to four thin, serrated ridges (fig. 6); Fa MM 84 - 94, FF 80 - 89; weight not known; woodlands of Central Angola, southeast Zaire, Zambia, Malawi and eastern Tanzania and Rwanda *Epomops dobsonii*
- b At least six thick palatal ridges; ridge pattern different 10
- 10 a Nine thick or partially thick ridges: three whole, the fourth narrowly divided in same specimens, the fifth to eighth or ninth medially notched with thick, prominent central portions and thin lateral parts; and three or four thin ridges (fig. 7); Fa MM 44 -50, FF

- 45 - 54; weight MM 19 - 21, FF 23 - 27; forests and woodlands from Guinea to Central African Republic..... *Nanonycteris veldkampii*
 African Chiroptera name *Plerotes anchietae*
- 11 b At most six thick palatal ridges..... 11
 a Six thick palatal ridges, one or two being postdental: first undivided, second to fourth either undivided or divided in the middle, fifth and sixth notched or narrowly divided; ridges never mutually fused 12
 b Essentially six thick palatal ridges but fusions between second and third and sometimes others may obscure the picture; first ridge prominent and undivided, second and third either prominent or weak, fourth to sixth prominent; second to sixth palatal ridges divided by a deep, continuous median groove narrowing posteriorly 17
- 12 a Second to sixth ridges medially divided (fig. 8); Fa 2MM 62.3 - 62.8, 1 F 65.8; weight not known; probably woodland, southern Congo, probably southern Zaïre, and northern Angola *Epomophorus grandis*
 b Second to fourth ridge undivided 13
- 13 a Five thick palatal ridges interdental and only one clearly postdental (fig. 9); Fa MM 72.3 - 94.9, FF 67.7 - 87.5; weight MM 60 - 124, FF 54 - 125; woodlands of Angola, Congo, Gabon, Zaïre, Zambia, East Africa between 4 and 34 S.....*Epomophorus wahlbergi*
 b Four thick palatal ridges interdental, fifth and sixth postdental (fifth exceptionally partly interdental)..... 14
- 14 a Fourth thick palatal ridge clearly nearer third than fifth (fig. 10); Fa MM 85.2 - 93.9, FF 81.1 - 85.5; weight not known; woodlands West Angola and North Namibia
*Epomophorus angolensis*
 b Fourth thick palatal ridge about halfway between third and fifth (fig. 11) 15
- 15 a Larger, on average; Fa MM 80.0 - 100.0, FF 75.0 - 94.8; weight MM 91 -155, FF 56 - 130; mainly woodlands, from Senegal to Central African Republic, in Ethiopia, and East Africa south of Lake Tanganyika..... *Epomophorus gambianus*
 b Smaller, on average; Fa MM below 81, FF below 79; weight MM below 100, FF below 85..... 16
- 16 a Fa range in MM 66.7 - 80.3, in FF 64.8 - 78.3; weight MM 54 - 99, FF 51 - 81; mainly woodlands, northeast Nigeria, south Sudan to Eritrea and to northwest Tanzania; known from few localities in Congo, Malawi and southeast Kenya.....*Epomophorus labiatus*
 b Fa range in MM 57.0 - 68.9, in FF 54.1 - 67.6; weight MM 32 - 58, FF 25 - 62; mainly woodlands East Sudan, Ethiopia, Somalia, lower parts of Kenya to South Malawi
*Epomophorus minor*
 African Chiroptera name *Epomophorus labiatus minor*
- 17 a All six thick palatal ridges prominent (fig. 12); second and third ridges may be fused, occasionally also third and fourth; Fa MM 46 - 55, FF 49 - 56; weight MM 24 - 35, FF 20 - 34; woodlands Gambia to Ethiopia and West Kenyan border, southward to Central Angola and southeast Zaïre..... *Micropteropus pusillus*
 b Second and third palatal ridge weakly developed (apparently fused in part of the specimens) (fig. 13); Fa 1 M 58.1, 3 FF 57.2 - 63.6; weight not known; woodland and forest mosaic of western South Zaïre and adjoining Angola.....*Micropteropus intermedius*
- 18 a Fa MM 38 - 50, FF 38 - 49; weight MM 11 - 20, FF 13 - 21; no tail; tongue highly extensible, with pointed, densely papillate tip; cheek teeth extremely reduced in height and width; males with ventral collar of thick, whitish hairs; forests Liberia and Guinea to Uganda, southwards to Angola and southeast Zaïre.....*Megaloglossus woermanni*
 b Fa more than 55; tail present or absent; tongue not highly extensible, with rounded tip, not densely papillate; cheek teeth variable; males with or without collar but collar never whitish..... 19
- 19 a Short hut distinct external tail 20
 b No external tail 29
- 20 a Toes partially webbed (fig. 14); Fa range 54 - 90; length second digit 71 - 81 % of Fa; tibiae wholly or partly furred; MM with ruff of thick hairs; upper alveolar line with weak angle between third and fourth premolar (fig. 15); cheek teeth squarish or oblong (fig. 16); simplified palatal ridge pattern 7 + 2 (fig. 17) 21
 b Toes not webbed; Fa 66 - 107; length second digit 64 - 71 % of Fa; tibiae practically naked or, when furred, in combination with laterally depressed cheek teeth (fig. 18);

- MM without ruff of thick hairs; upper alveolar line practically straight (fig. 19); cheek teeth oblong, laterally depressed in one species; simplified palatal ridge pattern 7 + 1 (fig. 20) 24
- 21 a Fa MM 68 - 88, FF 67 - 90; weight MM 60 - 97, FF 60 - 100; third metacarpal length 73 - 75% of Fa; tibia length 42 - 46% of Fa; tibia dorsally furred; P⁴ and M¹ squarish in outline; two I/1 present; M/3 reduced but present; forests Guinea-Bissau to Central African Republic, southern Congo and northwestern Angola, and mountainous areas in eastern Central and East Africa from South Ethiopia to Zimbabwe and Mozambique *Lissonycteris angolensis*
- b Fa 54 - 76; third metacarpal length 67 - 73% of Fa; tibia length 36 - 43% of Fa; distal quarter to third of tibia dorsally practically naked; P⁴ and M¹ oblong in outline; two or one I/1, present; M/3 reduced or absent 22
- 22 a Fa 65 - 76; weight 1 M 48, 1 F 56; interfemoral membrane only furred near legs; simplified palatal ridge pattern 6 + 2 (possibly also 7 + 2); two I/1 present; M/3 absent; forests southeast Kenya, eastern Tanzania, East Zimbabwe *Myonycteris relicta*
African Chiroptera name *Myonycteris (Myonycteris) relicta*
- b Fa 54 - 68; interfemoral membrane wholly furred; simplified palatal ridge pattern 7 + 2; either one or two I/1; M/3 reduced but normally present; West and Central Africa. 23
- 23 a Fa 54 - 68; weight MM 27 - 51, FF 31 - 60; two I/1; C/1 at least as high as P/3; P/4 with fused inner and outer ridges (fig. 21); forests from Guinea to northeast Zaïre, southwards to northwest Angola and North Zambia *Myonycteris torquata*
African Chiroptera name *Myonycteris (Myonycteris) torquata*
- b Fa <= 62 - 65; weight not known; one lower incisor; C/1 lower than P/3; P/4 with inner and outer ridges widely and deeply separated (fig. 22); forests of Sao Tome *Myonycteris brachycephala*
African Chiroptera name *Myonycteris (Phygetis) brachycephala*
- 24 a Fa 66 - 107; weight MM below 180, FF below 165; back fur generally relatively dark brownish or reddish brown, never yellowish; back fur not sharply demarcated from wing membrane; tibiae practically naked or, if furred, in combination with reduced, laterally depressed cheek teeth; simplified palatal ridge pattern 7 + 1 (occasionally 8 + 1); wing inserted at first or second toe or in between 25
- b Fa 109 - 134; weight MM above 200, FF above 175; back fur grizzled straw-yellow and hair-brown, closely adpressed, sharply demarcated from wing membrane, or, in combination with a Fa of over 120, greyish brown, more woolly, less adpressed and less sharply demarcated; cheek teeth never laterally depressed; simplified palatal ridge pattern 7 + 3; wing inserted at first toe 28
- 25 a Fa 85 - 107; tibia furred or naked 26
- b Fa 66 - 77; tibia practically naked. 27
- 26 a Fa MM 85 - 94, FF 85 - 95; weight MM 102 - 140, FF 94 - 162; fur long, tibiae dorsally furred; wing insertion at second toe (occasionally between second and first); cheek teeth narrow, with widths of large premolars and molars half their lengths or slightly more; mostly above 1000 m in mountainous areas of southeast Ethiopia, South Sudan, East Zaire, Uganda, Kenya, Tanzania, Malawi *Rousettus lanosus*
- b Fa MM 85 - 107, FF 82 - 107 (southwest Asia: MM 85 - 95, Ff 79 - 92); weight MM 111 - 168, FF 100-155 (Asia: MM 98 - 128, FF not known); fur short, tibiae dorsally practically naked; wing insertion at first toe (occasionally between first and second); widths of large premolars and molars clearly larger than half their lengths; predominantly lowland areas in Egypt to Turkey and Pakistan, from Gambia to Cameroun, southwards to northwest Angola, including Guinea Gulf islands, and from Ethiopia to South Africa, including continental islands *Rousettus egyptiacus*
African Chiroptera name *Rousettus aegyptiacus*
- 27 a Fa MM 71 - 77, FF 70 - 75; weight not known; wings inserted at base of second toe; widths of large premolars and molars clearly larger than half their lengths; the Comoros *Rousettus obliviosus*
- b Fa MM 67 - 76, FF 66 - 77; weight MM 60 - 83, FF 44 - 61; wings inserted between first and second toe; width of premolars and molars half their lengths or only slightly more; Madagascar *Rousettus madagascariensis*
- 28 a Fa MM 129 - 134, FF 122 - 130; weight MM 245 - 340, FF 220 - 330; fur rather long and woolly, light greyish brown; back fur colour not sharply demarcated from wing membrane; tooth rows only weakly diverging backwards; premaxillae proclivous, with

- a distinct space between I² and C¹ when viewed from lateral; P⁴ and M¹ with thick inner ridge and distinct median grooves; M² wider than long; lower incisors forming a semicircle; P/4 with a rudimentary anterior and a distinct posterior inner cusp; M/1 with thick inner and outer ridges; Madagascar..... *Eidolon dupreanum*
- b Fa MM 109 - 131, FF 111 - 134; weight MM 212 - 311, FF 183 - 350; fur short, closely adpressed, grizzled straw-yellow and hair-brown; back fur colour sharply demarcated from wing membrane; tooth rows diverging backwards; hardly or no space between I² and C¹ when viewed from lateral; P⁴ and M¹ with weak inner ridges and indistinct median grooves; M² longer than wide; lower incisors forming an almost straight row; P/4 without inner cusps; M/1 with thin inner and outer ridges; mainland Africa except deserts, and southwest Arabian Peninsula..... *Eidolon helvum*
- 29 a Fa below 110; ear length c. 12, ear nearly concealed in fur; tibia dorsally furred; Mauritius, Reunion (extinct) *Pteropus subniger*
- b Fa more than 110; ear length more than 20 30
- 30 a Ear length usually 25 or more, ear subacutely pointed, well exposed; interfemoral membrane welldeveloped (up to about 15) in the middle 31
- b Ear: either less than 25 long, pointed and largely concealed in the fur, or more than 25 long, rounded off and wellexposed; interfemoral membrane very narrow (some mm only) in the middle..... 34
- 31 a Larger: Fa MM 168 - 171, FF 153 - 168; ear length 35 - 38; back fur dark brown, without admixed lighter hairs; Madagascar *Pteropus rufus*
- b Smaller: Fa generally less than 164 in MM and than 159 in FF; ear length variable; back fur colour variable but in larger specimens, with Fa \geq 145, blackish brown with admixed whitish and/or reddish brown hairs; not on Madagascar 32
- 32 a Smaller: Fa MM 133 - 141; proximal part of dorsal side of tibia thickly furred, fur thinning out on distal part; weight MM 257 - 395, weight FF not known; Aldabra atoll *Pteropus aldabrensis*
- b Larger: Fa 145 or more; dorsal side of tibia at most partly thinly haired hut essentially naked; weight MM 470 - 610, FF 430 - 600..... 33
- 33 a Fa MM 147 - 159, FF 151 - 155; ear length 29 - 37; fur of head golden yellowish or brownish yellow, fur of mantle golden yellowish or orange brown; weight MM 479 - 604, FF 450 - 508; Seychellen, Comoren, Mafia..... *Pteropus seychellensis*
- b Fa MM 149 - 164, FF 145 - 159; ear length 26 - 28; fur of head mainly dark brown or reddish orange-brown, fur of mantle reddish in appearance; weight MM 470 - 610, FF 430 - 600; Pemba *Pteropus voelzkowi*
African Chiroptera name *Pteropus voelzkowi*
- 34 a Large: Fa MM about 159 - 171, FF about 150 - 162; ear pointed, length c. 21, almost hidden in the long fur; back fur with a dark brown spinal track and buff on the sides; dorsal side of tibia furred; Mauritius, Reunion *Pteropus niger*
- b Either the same size or larger hut with exposed, rounded ear and dorsal side of tibia essentially naked, or much smaller, with Fa less than 140; back fur with out colour contrast..... 35
- 35 a Fa 161 - 172; ear semi-circular rounded off, exposed; ear length about 30; dorsal side of tibia essentially naked; Comoros..... *Pteropus livingstonii*
- b Fa MM 121 - 134, FF 123 - 129; ear pointed, almost hidden in the long fur; ear length about 22.5; dorsal side of tibia furred; weight MM 216 - 295, FF 204 - 306; Rodrigues, Round Island..... *Pteropus rodricensis*

Appendix 5y: Bouchard (1998). *Chaerephon pumilus*

1	a	Ears conjoined	2
	b	Ears separated	6
2	a	Ears conjoined by triangular lappet of skin.....	3
	b	Ears conjoined by unstructured band of skin.....	5
3	a	Large paired nasal inflations; length of forearm 37 - 39 mm ... <i>Chaerephon gallagheri</i>	
	b	No nasal inflations; length of forearm 42 - 50 mm.....	4
4	a	Color uniformly brown with white belly stripe; lack of well defined interaural pocket; length of forearm 42 - 44 mm.....	<i>Chaerephon major</i>
	b	Color blackish brown dorsally and no white stripe ventrally; well defined interaural pocket; length of forearm 46 - 50 mm	<i>Chaerephon johorensis</i>
5	a	Color uniformly brown; length of forearm 48 - 54 mm	<i>Chaerephon jobensis</i>
	b	Color dark brown dorsally and lighter ventrally; length of forearm 40 - 50 mm	<i>Chaerephon plicata</i>
6	a	Size larger, length of forearm 42 - 52 mm.....	7
	b	Size smaller, length of forearm 34 - 42 mm.....	12
7	a	Paired caudal glands opening as slits on either side of tail root below; length of forearm 46 - 47 mm	<i>Chaerephon bemmeleni</i>
		African Chiroptera name	<i>Chaerephon bemmeleni</i>
	b	Without such glands; length of forearm 42 - 52 mm.....	8
8	a	White spots, stripes, or lateral bands	9
	b	Without white marks.....	10
9	a	Color umber brown with variable pattern of white spots or short stripes arranged laterally on crown and sometimes also on shoulders and flanks; length of forearm 46 - 51 mm.....	<i>Chaerephon bivittata</i>
		African Chiroptera name	<i>Chaerephon bivittatus</i>
	b	Conspicuous white lateral band below, along flanks at junction with membrane, contrasting with very dark brown color above and below; length of forearm 44 - 50 mm	<i>Chaerephon nigeriae</i>
10	a	Color umber brown, top of head, neck and throat darker, almost black; length of forearm 46 - 48 mm	<i>Chaerephon ansorgei</i>
	b	Color uniformly russet brown; length of forearm 42 - 52 mm.....	11
11	a	Length of forearm 42 - 46 mm.....	<i>Chaerephon russata</i>
		African Chiroptera name	<i>Chaerephon russatus</i>
	b	Length of forearm 50 - 52 mm.....	<i>Chaerephon aloysiisabaudiae</i>
12	a	Length of forearm 34 - 39 mm; males with long (13 - 14 mm) bicolored postaural crest (dark basally, pale apically); light wings; color below light with whitish band down to the mid-belly	<i>Chaerephon chapini</i>
	b	Length of forearm 37 - 42 mm; males with short (<= 10 mm) unicolored postaural crest; wings dark or light; color below variable, with or without white on the median area	<i>Chaerephon pumilus</i>

Appendix 5z: Colket and Wilson (1998). *Taphozous hildegardeae*

- 1 a Frontal region of skull only weakly concave. Rump and pygal areas at least partly naked. Occipital "helmet" on skull more or less developed (Subgenus *Liponycteris*) 2
 b Frontal region of skull strongly concave. Rump and pygal areas well haired. No occipital "helmet" on skull (Subgenus *Taphozous*)..... 3
- 2 a Small (forearm length 61 - 69 mm). A slight but definite concavity in the frontal region. Hairless rump and pygal areas relatively small. Occipital "helmet" of skull poorly developed *Taphozous hamiltoni*
 b Larger (forearm length 66 - 79 mm). Frontal concavity virtually absent. Hairless rump and pygal areas relatively large. Occipital "helmet" well developed *Taphozous nudiventris*
- 3 a Gular sac present..... 4
 b Gular sac absent..... 8
- 4 a Distinctive color pattern, grizzled gray dorsally and white ventrally *Taphozous mauritianus*
 b Color uniform dorsally and only slightly paler, if at all, ventrally..... 5
- 5 a Basisphenoid pits broad..... 6
 b Basisphenoid pits narrow or medium in width 7
- 6 a Size medium (forearm length 63 - 67 mm). Anterior ventral mandibular emargination strong. Australia and New Guinea..... *Taphozous australis*
 African Chiroptera name *Taphozous perforatus sudani*
 b Size relatively small (forearm length 55 - 62 mm). Anterior ventral mandibular emargination weak. SE Asia *Taphozous longimanus*
- 7 a Size larger (forearm length 63 - 72 mm). Anterior ventral mandibular emargination strong..... *Taphozous hilli*
 b Size smaller (forearm length 58 - 63 mm). Anterior ventral mandibular emargination weak *Taphozous kapalgensis*
- 8 a Blackish or reddish beard-like throat patch variably developed in males..... 9
 b No differentiated throat patch present 11
- 9 a Size relatively large (forearm length 69 - 73 mm)..... *Taphozous theobaldi*
 b Size medium (forearm length 60 - 70 mm)..... 10
- 10 a Braincase relatively broad. Fur relatively pale in color. Africa *Taphozous hildegardeae*
 b Braincase relatively slender. Fur relatively dark in color. SE Asia *Taphozous melanopogon*
- 11 a Size relatively large (forearm length, 70 - 75 mm)..... *Taphozousroughtoni*
 b Size medium (forearm length 57 - 71 mm)..... 12
- 12 a Smaller (forearm length 57 - 67 mm), ears relatively short (17 - 20 mm). Africa and Asia..... *Taphozous perforatus*
 b Larger (forearm length 64 - 71 mm), ears longer (21 - 22 mm). Australia . *Taphozous georgianus*

Appendix 5aa: Owen-Ashley and Wilson (1998). *Micropteropus pusillus*

- 1 a Size smaller, length of forearm 46.4 - 55.7 mm; greatest length of skull 26.8 - 31.0 mm; halves of palatal ridges 4 - 6 united to ridge 3 and to each other . *Micropteropus pusillus*
- b Size larger, length of forearm 57.2 - 63.6 mm; greatest length of skull 32.0 - 33.3 mm; halves of palatal ridges 4 - 6 separated *Micropteropus intermedius*

Appendix 5ab: Taylor (1998). The smaller mammals of KwaZulu-Natal.

- 1 a Tail reduced or absent; face dog-like; second digit ending in claw; cheekteeth simple without well developed cusp pattern (Suborder Megachiroptera) 2
 b Tail well developed; face not dog-like; second digit not ending in claw; cheekteeth forming well developed cusp pattern 4
- 2 a Ears with white basal tufts; no tail (genus *Epomophorus*) *Epomophorus wahlbergi wahlbergi*
 African Chiroptera name *Epomophorus wahlbergi*
 b Ears without white basal tufts; reduced tail 3
- 3 a Forearm generally 110 - 130 mm; colour generally tawny, with dorsal fur restricted to a narrow median band, sharply demarcated from naked wing membranes (genus *Eidolon*) *Eidolon helvum helvum*
 African Chiroptera name *Eidolon helvum*
 b Forearm 65 - 102 mm; ruff of stiff hair present or absent on lower neck of adult males (genus *Rousettus*) *Rousettus aegyptiacus leachii*
 African Chiroptera name *Rousettus aegyptiacus*
- 4 a Terminal portion of tail projecting past edge of inter-femoral membrane 5
 b Tail almost entirely enclosed within interfemoral membrane 10
- 5 a Free terminal portion of tail emerges above middle of upper surface of membrane (family Emballonuridae; genus *Taphozous*) *Taphozous mauritanus*
 b Free terminal portion of tail projects considerably beyond hind margin of membrane (family Molossidae) 6
- 6 a Size very large, forearm 62 - 73 mm; ears very large, 38 - 40 mm, conjoined on extended snout; conspicuous bicoloured dorsal coat with pale neck collar (genus *Otomops*) *Otomops martiensseni icarus*
 b Size smaller, forearm less than 60 mm; ears smaller; dorsal coat not bicoloured 7
- 7 a Size small, forearm 36 - 39 mm (genus *Chaerephon*) 8
 b Size larger; forearm greater than 40 mm 9
- 8 a Anterior palatal emargination well developed, extending beyond upper incisors, and including area of incisive foramina; third commissure of last upper molar well developed, almost as long as second commissure *Chaerephon ansorgei*
 b Anterior palatal emargination greatly reduced, not extending behind upper incisors and separated from incisive foramina by a bony bar, third commissure much less developed than second *Chaerephon pumila*
 African Chiroptera name *Chaerephon pumilus*
- 9 a Size smaller, forearm 45 - 50 mm; colour dark above and paler below, paler band in front of shoulders (genus *Mops*) *Mops condylurus condylurus*
 African Chiroptera name *Mops (Mops) condylurus*
 b Size larger, forearm 46 - 54 mm; colour dark sooty-brown almost black above same colour or a shade paler below, no band in front of shoulders (genus *Tadarida*) *Tadarida aegyptiaca aegyptiaca*
- 10 a Muzzle with nose-leaves or deep central slit 11
 b Muzzle without nose-leaves or deep central slit (family Vespertilionidae) 20
- 11 a Muzzle with deep, central longitudinal slit (family Nycteridae; genus *Nycteris*) 12
 b Face without slit, but with well-developed nose-leaves covering muzzle 13
- 12 a Upper incisors trifold; tragus falciform or semilunate; ears smaller, 25 mm or less *Nycteris hispida villosa*
 African Chiroptera name *Nycteris hispida*
 b Upper incisors bifid; tragus pyriform; ears elongated, 28 - 37 mm .. *Nycteris thebaica capensis*
 African Chiroptera name *Nycteris thebaica*
- 13 a Posterior leaflet of noseleaf with upper edge either elliptical in outline or tridentate (three-pronged) (family Hipposideridae) 19
 b Posterior leaflet of noseleaf triangular with erect, pointed tip (family Rhinolophidae; genus *Rhinolophus*) 14
- 14 a Anterior upper premolar, when present external to toothrow; canine and fourth upper premolar in contact; connecting process bluntly pointed 15
 b Anterior upper premolar in toothrow; canine and fourth upper premolar not in contact; connecting process blunt or sharply pointed 16

- 15 a Forearm 50 - 57 mm *Rhinolophus clivosus zuluensis*
African Chiroptera name *Rhinolophus clivosus*
- b Forearm 45 - 50 mm *Rhinolophus darlingi darlingi*
African Chiroptera name *Rhinolophus darlingi*
- 16 a Connecting process rises to an erect point; inter-ptyergoid groove usually shallow, not clearly defined by bordering ridges; anterior upper premolar usually not crowded between canine and fourth upper premolar, longer than wide 17
- b Connecting process with low, bluntly pointed tip; inter-ptyergoid groove deep and clearly defined by bordering ridges; anterior upper premolar usually crowded between canine and fourth upper premolar, at least as wide as it is long 18
- 17 a First phalanx of fourth finger notably shortened in relation to metacarpal length; connecting process pointed, molar width less than half width of palate between molars *Rhinolophus landeri lobatus*
African Chiroptera name *Rhinolophus landeri*
- b First phalanx of fourth finger not notably shortened in relation to metacarpal length; connecting process rises to a high narrow horn, molar width more than half width of palate between molars *Rhinolophus blasii empusa*
African Chiroptera name *Rhinolophus blasii*
- 18 a Sella broader; ears longer, 20 - 22 mm; condylocanine length more than 15.5 mm *Rhinolophus simulator*
- b Sella narrower; ears shorter, 18 - 20 mm; condylocanine length less than 15.5 mm *Rhinolophus swinnyi*
- 19 a Posterior leaflet of noseleaf with upper edge elliptical in outline; size larger, forearm greater than 40 mm (genus *Hipposideros*) *Hipposideros caffer caffer*
African Chiroptera name *Hipposideros caffer*
- b Posterior leaflet of noseleaf with tridentate shape; size smaller, forearm 31 - 35 mm (genus *Cloeotis*) *Cloeotis percivali australis*
African Chiroptera name *Cloeotis percivali*
- 20 a Second phalanx of third digit about three times as long as first (subfamily Miniopterinae; genus *Miniopterus*) 21
- b Second phalanx of third digit not especially elongated 22
- 21 a Forearm 42 - 44 mm; skull length c. 14 mm; colour brownish-black and/or russet *Miniopterus fraterculus*
- b Forearm 42 - 47 mm; skull length c. 15 mm; colour slaty-black *Miniopterus schreibersii natalensis*
African Chiroptera name *Miniopterus natalensis*
- 22 a Ears not funnel-shaped, without deep emargination below tip; tragus not sharply pointed; braincase not high and rounded (subfamily Vespertilioninae) 23
- b Ears funnel-shaped, with deep emargination below tip; tragus long, narrow, sharply pointed; braincase high and rounded (subfamily Kerivoulinae; genus *Kerivoula*). 22
- b Size smaller, forearm 30 - 36 mm; skull < 13.5 mm, colour brownish or greyish-brown above, sometimes lightly grizzled with greyish-white or white, and brown or greyish-brown to greyish-white or white below *Kerivoula lanosa lucia*
African Chiroptera name *Kerivoula lanosa*
- b Size larger, forearm 34 - 39 mm; skull > 15 mm; colour above bright reddish-chestnut, below either whitish or buffy, never brown *Kerivoula argentata zuluensis*
African Chiroptera name *Kerivoula argentata*
- 23 a Six upper, six lower cheekteeth on each side (genus *Myotis*) 24
- b Fewer than six upper and six lower cheekteeth 25
- 24 a Size larger, forearm over 52 mm *Myotis (Chrysopteron) welwitschii*
African Chiroptera name *Myotis welwitschii*
- b Size smaller, forearm under 52 mm *Myotis (Selysius) tricolor*
African Chiroptera name *Myotis tricolor*
- 25 a Five upper, five lower cheekteeth; two upper incisors on each side (genus *Pipistrellus*) 26
- b Four upper, five lower cheekteeth; one or two upper incisors on each side 28
- 26 a Outer upper incisor more than half length of inner upper incisor; forehead strongly concave; upper canine and posterior upper premolar separated by a gap through which anterior upper premolar can be clearly seen rising above cingula of adjoining teeth; interdental palate clearly longer than broad *Pipistrellus (Pipistrellus) nanus*

- nanus*
 African Chiroptera name *Pipistrellus nanus*
- b Outer upper incisor less than half length of inner upper incisor; forehead usually flat or weakly concave; upper canine and posterior upper premolar in contact or barely separated; anterior upper premolar seen from the side only with difficulty; usually not rising above cingula of adjoining teeth; interdental palate not clearly longer than broad 27
- 27 a Posterior upper incisor barely extending beyond cingulum of anterior upper incisor; anterior upper premolar a pointed tooth rising above cingulum of canine but not above cingulum of posterior upper premolar; maxillary tooththrow more than 4.5 mm *Pipistrellus (Pipistrellus) kuhlii broomi*
 (This should be *Pipistrellus hesperidus*. See Kock (2001))
 African Chiroptera name *Pipistrellus hesperidus*
- b Posterior upper incisor extending well beyond cingulum of anterior upper incisor; anterior upper premolar a flat-crowned tooth completely cingulum of adjoining teeth; maxillary tooththrow less than 4.5 mm *Pipistrellus (Pipistrellus) anchietai*
 African Chiroptera name *Hypsugo anchietae*
- 28 a Two upper incisors on each side 29
- b One upper incisor on each side 34
- 29 a Rostrum very short and broad; braincase very high, more than two thirds of condylobasal length; conspicuous reticulation of wing membranes (genus *Chalinolobus*) *Chalinolobus variegatus variegatus*
 African Chiroptera name *Glauconycteris variegata*
- b Rostrum not shortended; braincase not elevated; no wing pattern 30
- 30 a Ears 18 mm or more, about half length of forearm (genus *Laephotis*) *Laephotis wintoni*
- b Ears less than 18 mm, much less than half length of forearm (genus *Eptesicus*)... 31
- 31 a Wing membranes white or translucent *Eptesicus rendalli*
 African Chiroptera name *Neoromicia rendalli*
- b Wing membranes dark 32
- 32 a Size larger, forearm more than 40 mm, inner upper incisors unicuspid *Eptesicus hottentotus bensoni*
 African Chiroptera name *Eptesicus hottentotus*
- b Size smaller, forearm less than 40 mm, inner upper incisors bicuspid 33
- 33 a Dorsal colour paler; wing membranes edged with white; dorsal fur up to 8 mm long; forearm 30 - 32 mm; condylobasal length less than 11.9 mm; skull lacking posterior occipital 'helmet' *Eptesicus zuluensis*
 African Chiroptera name *Neoromicia zuluensis*
- b Dorsal colour darker; wing membranes not edged with white; dorsal fur not more than 5 mm long; forearm 29 - 35 mm; condylobasal length more than 11.9 mm; skull with posterior occipital 'helmet' *Eptesicus capensis capensis*
 African Chiroptera name *Neoromicia capensis*
- 34 a Size larger, forearm greater than 46 mm; first and second upper molars with W-pattern obsolescent; tragus long and tapering (genus *Scotophilus*) 35
- b Size smaller, forearm less than 46 mm; first and second upper molars with normal W-pattern; tragus either sickle-shaped or short and broad 36
- 35 a Forearm 50 - 65 mm; skull length 20 - 23 mm *Scotophilus dinganii dinganii*
 African Chiroptera name *Scotophilus dinganii*
- b Forearm 43 - 50 mm; skull length 16 - 19 mm *Scotophilus viridis*
- 36 a Wings dark-coloured; skull with rostrum not broadened; palatal emargination narrow; anterior lower premolar about half the crown area of the next premolar; upper canines with rounded anterior surface; tragus halfmoon-shaped; penis not enlarged; forearm 29 - 33 mm (genus *Nycticeius*) *Nycticeius schlieffenii australis*
 African Chiroptera name *Nycticeinops schlieffenii*
- b Wings pale-coloured; skull with rostrum notably broadened, particularly across lacrymals; palatal emargination broader; lower premolars equal in crown area; upper canines with broad, flat anterior surface; tragus short and broad; penis greatly lengthened; forearm 28 - 38 mm (genus *Scotoecus*) *Scotoecus albofuscus woodi*
 African Chiroptera name *Scotoecus albofuscus*

Appendix 5ac: Dunlop (1999). *Mops midas*

- | | | | |
|----|---|---|--|
| 1 | a | Anterior palatal emargination present, anterior upper premolar moderately to relatively large (subgenus <i>Xiphonycteris</i>)..... | 2 |
| | b | Anterior palatal emargination largely closed, anterior upper premolar absent or greatly reduced (subgenus <i>Mops</i>) | 6 |
| 2 | a | Forearm < 32 mm; M3 without third commissure | 3 |
| | b | Forearm > 32 mm; M3 with short but distinct commissure | 4 |
| 3 | a | Canines with enlarged cingula, upper incisors not projecting in front of anterior face of canine cingula; length of skull 14.0 - 16.8 mm | <i>Mops spurrelli</i> |
| | | African Chiroptera name | <i>Mops (Xiphonycteris) spurrelli</i> |
| | b | Canines without enlarged cingula; upper incisors projecting in front of anterior face of canine cingula; length of skull 15.0 - 17.5 mm | <i>Mops nanulus</i> |
| | | African Chiroptera name | <i>Mops (Xiphonycteris) nanulus</i> |
| 4 | a | Forearm < 35 mm; length of skull 15.8 - 17.8 mm..... | <i>Mops petersoni</i> |
| | | African Chiroptera name | <i>Mops (Xiphonycteris) petersoni</i> |
| | b | Forearm >= 35 mm; length of skull 17.2 - 20.6 mm..... | 5 |
| 5 | a | Wing inserts high on back; dorsal pelage restricted to top of back; basisphenoid pits deep and rounded laterally with septum between nearly parallel | <i>Mops thersites</i> |
| | | African Chiroptera name | <i>Mops (Xiphonycteris) thersites</i> |
| | b | Wing inserts lower on sides of body; dorsal pelage not restricted to top of back; basisphenoid pits shallow and long oval shaped with septum between narrowing anteriorly | <i>Mops brachypterus</i> |
| | | African Chiroptera name | <i>Mops (Xiphonycteris) brachypterus</i> |
| 6 | a | Forearm > 50 mm | 7 |
| | b | Forearm < 50 mm | 9 |
| 7 | a | Skull length >= 26 mm | <i>Mops midas</i> |
| | | African Chiroptera name | <i>Mops (Mops) midas</i> |
| | b | Skull length < 26 mm | 8 |
| 8 | a | Ears joined at base | <i>Mops congicus</i> |
| | | African Chiroptera name | <i>Mops (Mops) congicus</i> |
| | b | Ears separated at base | <i>Mops trevori</i> |
| | | African Chiroptera name | <i>Mops (Mops) trevori</i> |
| 9 | a | Forearm < 41 mm | <i>Mops demonstrator</i> |
| | | African Chiroptera name | <i>Mops (Mops) demonstrator</i> |
| | b | Forearm 41 - 51 mm | 10 |
| 10 | a | Anterior upper premolar vestigial but present..... | <i>Mops condylurus</i> |
| | | African Chiroptera name | <i>Mops (Mops) condylurus</i> |
| | b | Anterior upper premolar absent | 11 |
| 11 | a | Size relatively small (forearm 39 - 45 mm); C-M3 6.2 - 6.9 mm | <i>Mops sarasinorium</i> |
| | b | Size medium (forearm 43 - 48); C-M3: 7.0 - 7.7 mm..... | <i>Mops mops</i> |

Appendix 5ad: Gray et al. (1999). Nycteris thebaica

- 1 a Posterior lower premolar small; its tip reaching about to cingulum of anterior premolar; no marked concavity at center of posterior margin of tragus..... 2
- b Posterior lower premolar large; its height about equal to that of anterior cusp of first molar; marked concavity at center of posterior margin of tragus 11
- 2 a Upper incisors trifid; tragus small (*hispid*a group) 3
- b Upper incisors bifid; tragus large..... 6
- 3 a Size very large; forearm 51.6 - 64.5 mm; greatest length of skull 23.3 - 27.5 mm; only occurring in central and western African rainforests and in eastern African coastal forests..... *Nycteris grandis*
- b Size moderate; forearm 32.8 - 44.5 mm; greatest length of skull 15.3 - 18.4 mm; occurring in central and western African rainforests, eastern African coastal forests, and savanna areas 4
- 4 a Occurring in northeastern and eastern African savannas and coastal forests of eastern Africa 5
- b Occurring in the central and western African rainforests and savanna areas. *Nycteris hispid*a
- 5 a Size slightly larger; forearm 37.3 - 44.5 mm; condylobasal length 14.6 - 15.9 mm; maxillary tooththrow 5.7 - 6.2 mm; mandibular tooththrow 6.4 - 7.5 mm *Nycteris aurita*
- b Size slightly smaller; forearm 34.8 - 43.4 mm; condylobasal length 13.2 - 15.0 mm; maxillary tooththrow 4.8 - 5.8 mm; mandibular tooththrow 5.4 - 6.6 mm .. *Nycteris hispid*a
- 6 a Tragus with squared or flattened top (*macrotis* group) 7
- b Tragus inverted pear shaped or pyriform (*thebaica* group) 8
- 7 a Forearm 36.1 - 41.9 mm; condylobasal length 14.0 - 16.1 mm; very rare species; scarce records from Cameroon, Ethiopia, Zambia, and Zanzibar *Nycteris woodi*
- b Forearm 39.9 - 54.8 mm; condylobasal length 16.4 - 19.6 mm; common species in rain forest and savanna areas of western, eastern and northeastern Africa... *Nycteris macrotis*
- 8 a Occurring in west African savanna areas..... 9
- b Occurring over the remaining part of Africa, south of the Sahara, along the Nile River, on the Arabian Peninsula and Morocco 10
- 9 a Size slightly larger; forearm 39.2 - 47.4 mm; condylobasal length 15.8 - 17.5 mm; mandibular length 11.8 - 13.2 mm; mandibular tooththrow 6.2 - 7.4 mm; length of metacarpus of third finger 28.9 - 36.1 mm; length of tibia 20.3 - 24.9; the following combination of measurements > 21.7: (1.153 x length of maxillary tooththrow + 0.187 x width across the upper canines + 0.557 x width across posterior upper molars + 0.657 x mandibular length + 0.395 x length of mandibular tooththrow) *Nycteris thebaica*
- b Size slightly smaller; forearm 35.1 - 44.0 mm; condylobasal length 14.2 - 16.5 mm; mandibular length 10.4 - 12.2 mm; mandibular tooththrow 4.6 - 6.9 mm; length of metacarpus of third finger 26.4 - 32.1; length of tibia: 17.0 - 22.3 mm; the following combination of measurements < 21.7: (1.153 x length of maxillary tooththrow + 0.187 x width across the upper canines + 0.557 x width across posterior upper molars + 0.657 x mandibular length + 0.395 x length of mandibular tooththrow) *Nycteris gambiensis*
- 10 a Forearm 32.3 - 50.0 mm; condylobasal length 15.1 - 18.7 mm; common species with wide distribution *Nycteris thebaica*
- b Forearm > 50.0 mm; condylobasal length > 19.5 mm; very rare species, only known from the type ad paratype from Zinave, Mozambique *Nycteris vinsoni*
- 11 a Upper incisors bi- or tricuspid; occurs in the southeastern Asian forest areas (*javanica* group) 12
- b Upper incisors bicuspid; occurs in the African forest areas (*arge* group)..... 13
- 12 a Forearm 41.5 - 50.4 mm; greatest length of skull 19.1 - 20.6 mm; length of mandibula 13.0 - 14.6 mm; upper incisors dominantly tricuspid; limited to Java and Sumatra *Nycteris javanica*
- b Forearm 56.7 - 52.8 mm; greatest length of skull 21.0 - 22.9 mm; length of mandibula 14.8 - 16.4 mm; upper incisors dominantly bicuspid; occurring on Borneo and Malaysian Peninsula *Nycteris tragata*
- 13 a Size smallest; forearm 31.7 - 37.0 mm; condylobasal length 12.8 - 14.0 mm; zygomatic width 8.4 - 9.4 mm; width of braincase 6.5 - 7.4 mm; length of mandibula 9.2 - 10.7 mm..... *Nycteris nana*

- b Size larger; forearm 33.7 - 48.5 mm; condylbasal length 14.6 - 18.8 mm; zygomatic width 10.0 - 12.6 mm; width of braincase 7.3 - 9.0 mm; length of mandibula 10.1 - 15.9 mm..... 14
- 14 a Size largest; forearm 44.0 - 48.5 mm; greatest length of skull 20.2 - 21.7 mm; length of mandibula 13.8 - 15.9 mm; length of metacarpus of third finger 33.3 - 35.8 mm; length of metacarpus of fourth finger 36.2 - 37.7 mm; very rare species, with some scattered records from the western and central African rainforest *Nycteris major*
African Chiroptera name *Nycteris macrotis*
- b Size intermediate; forearm 33.7 - 46.8 mm; greatest length of skull 15.4 - 20.3 mm; length of mandibula 10.1 - 14.2 mm; length of metacarpus of fourth finger 28.0 - 37.0 mm; fairly common in the western and central African rainforest 15
- 15 a Slightly smaller; forearm length 33.7 - 38.0 mm; greatest length of skull 15.4 - 18.3 mm; condylobasal length 14.6 - 15.7 mm; length of mandibula 10.1 - 12.6 mm; occurring in the coastal areas of western Africa, Cameroon, Gabon, northeastern Democratic Republic of Congo (formerly Zaire), and northeastern Angola *Nycteris intermedia*
- b Slightly larger; forearm length 35.4 - 46.8 mm; greatest length of skull 18.0 - 20.3 mm; condylobasal length 15.4 - 18.0 mm; length of mandibula 12.1 - 14.2 mm; commonest species of the group, occurring over the entire western and central African rainforest area *Nycteris arge*

Appendix 5ae: Kwiecinski and Griffiths (1999). *Rousettus egyptiacus*

- 1 a Wing membrane (plagiopatagium) attached to second toe of foot 2
 b Wing membrane (plagiopatagium) attached to first toe of foot (subgenus *Rousettus*) 3
- 2 a Braincase strongly deflected ventrally from a line drawn along the axis of the rostrum; premaxillaries not fused to each other; pm1 much larger in bulk than lower incisor; molars very narrow (width about one-half the length); antitragus of ear obsolete; forearm 84 - 92 mm (subgenus *Stenonycteris*) *Rousettus lanosus*
 b Braincase slightly deflected; premaxillaries fused to each other; pm1 subequal in bulk to lower incisor; molars broad; antitragus of ear distinct; forearm 66 - 84 mm *Lissonycteris angolensis*
- 3 a Median edge of plagiopatagium attached to body near the dorsal midline; forearm 79 - 89 mm (known from Sumatra and Borneo only) *Rousettus spinalatus*
 b Median edge of plagiopatagium attached to side of the body 4
- 4 a Uropatagium well-furred for nearly entire anterior half; forearm 67 - 83 mm (known from Sulawesi and Sanghir Islands only) *Rousettus celebensis*
 b If uropatagium has fur, it is well-furred only near root of tail; otherwise sparsely furred to nearly naked 5
- 5 a Width of premolars and molars about equal to or very slightly greater than one-half their length (except m2 and m3 which are wider); forearm 65 - 76 mm (known from Madagascar only) *Rousettus madagascariensis*
 b Width of premolars and molars broader 6
- 6 a Pollex 30 - 38 mm, second phalanx of third digit 50 - 62 mm (forearm 81 - 102 mm) *Rousettus egyptiacus*
 African Chiroptera name *Rousettus aegyptiacus*
 b Pollex 22 - 31 mm; second phalanx of third digit 36 - 51 mm 7
- 7 a Skull deflection greater than in other species belonging to subgenus *Rousettus*, but not nearly as deflected as in *Rousettus (Stenonycteris) lanosus* (forearm 70 - 75 mm); endemic to Comoro Islands (between Africa and northern Madagascar) *Rousettus obliviosus*
 b Little or no skull deflection; distributed in southern Asia from Pakistan across India (and Sri Lanka) to southeastern China and Viet Nam and south through part of the Malay Peninsula, Sumatra, Java, and Bali (*leschenaulti*) or from Thailand through the Malay Peninsula and East Indies to the Philippines and Solomon Islands (*amplexicaudatus*) 8
- 8 a Third lower molar elliptical in outline, about twice as long as broad; ears 14 - 16 mm in width; forearm 75 - 96 mm *Rousettus leschenaulti*
 b Third lower molar subcircular in outline, only slightly longer than broad (breadth from 2/3 to 5/6 length); ears 10 - 13 mm in width; forearm 66 - 91 mm *Rousettus amplexicaudatus*

Appendix 5af: Taylor (2000). Bats of Southern Africa

- 1 a Claw on second finger, Fa 66 - 115 mm long; face doglike (Suborder Megachiroptera, Family Pteropodidae: fruit bats) 2
 b Second digit without claw; Fa < 66 long; face not doglike (Suborder Microchiroptera) 9
- 2 a Fa > 110 mm long (110 - 130 mm); colour generally tawny, with dorsal fur restricted to a narrow median band, sharply demarcated from naked wing membranes *Eidolon helvum*
 b Fa < 110 mm long 3
- 3 a Ears with white basal tufts; tail absent 4
 b Ears without white basal tufts; reduced tail present 7
- 4 a Rousettes of males particularly developed, yellowish in colour; face shortened, shorter than braincase; distribution in southern Africa limited to Chobe River in Botswana; Fa 80 - 92 mm..... *Epomops dobsoni*
 African Chiroptera name *Epomops dobsonii*
 b Rousettes less conspicuous, white-coloured; face longer than braincase; widespread distribution; Fa 68 - 95 mm (*Epomophorus*) 5
- 5 a One palatal ridge behind last molar; Fa 68 - 95 mm *Epomophorus wahlbergi*
 b Two palatal ridges behind last molar; Fa 75 - 94 mm 6
- 6 a 4th palatal ridge halfway between 3rd and 5th; widespread distribution; Fa 75 - 88 mm *Epomophorus gambianus*
 b 4th palatal ridge closer to 3rd than 5th; southern African distribution restricted to southwestern Angola and Ovamboland in northern Namibia; Fa 81 - 94 mm *Epomophorus angolensis*
- 7 a Wing membranes arise from first toe; hair short and sleek; Fa > 89 mm (89 - 96 mm); ruff of stiff hairs absent from throat of males; tail fairly robust ... *Rousettus egyptiacus*
 African Chiroptera name *Rousettus aegyptiacus*
 b Wing membranes arise from second toe; hair longer and coarser; Fa < 90 mm; ruff of stiff hairs present on throat of males, tail relatively shorter, less robust..... 8
- 8 a Size smaller, Fa < 80 mm (66 - 76 mm); distribution in southern Africa limited to Haroni-Rusitu confluence in eastern Zimbabwe *Myonycteris relicta*
 African Chiroptera name *Myonycteris (Myonycteris) relicta*
 b Size larger, Fa > 80 mm (82 - 90 mm); occurring more widely in the Eastern Highlands of Zimbabwe and central Mozambique *Lissonycteris angolensis*
- 9 a Tail ends in a T-shaped cartilage; face with deep slit (Family Nycteridae, genus *Nycteris*; slit-faced bats) 10
 b Tail without T-shaped cartilage; face without deep slit 14
- 10 a Larger in size, Fa 57 - 66 mm, ear 28 - 35; mass over 30 g *Nycteris grandis*
 b Smaller in size, Fa 37 - 52 mm, ear 18 - 37 mm; mass less than 20 g 11
- 11 a Tragus has a distinctive 'semi-lunate' (half-moon) shape; Fa 36 - 50 mm, ear 18 - 34 mm 12
 b Tragus has a distinctive 'pyriform' (finger-like) shape; Fa 42 - 52 mm, ear 28 - 37 mm *Nycteris thebaica*
- 12 a Ears shorter, 18 - 25 mm; upper incisors trifold (three-lobed), Fa 36 - 45 mm . *Nycteris hispida*
 b Ears longer, 28 - 34 mm, upper incisors bifid (two-lobed), Fa 37 - 50 mm 13
- 13 a General colour greyish; smaller, Fa 37 - 42 mm, ear 29 - 34 mm *Nycteris woodi*
 b General colour brownish, larger, Fa 45 - 50 mm, ear 28 - 34 mm ... *Nycteris macrotis*
- 14 a Tail extends beyond the edge of, or protrudes through, the interfemoral membrane 15
 b Tail almost entirely enclosed within interfemoral membrane (at most two or three vertebrae not included) 31
- 15 a Free terminal portion of tail protrudes through middle of upper surface of tail membrane (Family Emballonuridae; sheath-tailed bats) 16
 b Free terminal portion of tail extends considerably beyond hind margin of tail membrane (Family Molossidae; free-tailed bats) 18
- 16 a Size smaller, Fa < 50 mm (46 - 49 mm); distribution in southern Africa restricted to Zambezi River in Mozambique..... *Coleura afra*
 b Size larger, Fa > 60 mm; widespread distribution in southern Africa (*Taphozous*). 17
- 17 a Colour grizzled-grey above and pure white below; gular throat pouch present in males; Fa 60 - 66 mm; mean 63 mm *Taphozous mauritanus*

- b Dark brown colour above, paler below but not white, no gular pouch in males; Fa 62 - 63 mm; mean 62 mm *Taphozous perforatus*
- 18 a Size very large, Fa 62 - 73 mm, ears very large, 38 - 40 mm, meeting on extended snout; conspicuous paler shoulder band separating darker anterior and posterior upper regions *Otomops martiensseni*
- b Not combining above characters 19
- 19 a Ears separate (genus *Mormopterus*) 20
- b Ears joined 21
- 20 a Head conspicuously flattened, greatest braincase dept not more than a third of the greatest width; 'warty' muzzle; main 'brush' of hairs above nose; occurring widely in drier, rocky areas of the Western Cape, Northern Cape and Northern Province, Namibia, Botswana, and southern Zimbabwe; Fa 44 mm ... *Mormopterus petrophilus*
African Chiroptera name *Sauromys petrophilus*
- b Skull not as conspicuously flattened, muzzle not warty; no brush of hairs above nose; known southern Africa from just two specimens collected in Durban over 150 years ago *Mormopterus acetabulosus*
- 21 a Size smaller, Fa 36 - 43 mm, or if larger than 43 mm, almost always having one or more of the following; 1) a dark blackish 'beard' on the throat, 2) characteristic white flecks or short strips on head and shoulders, or 3) conspicuous lateral band of white fure running lengthwise along underneath of the wing membrane where it joins the body; greateste skull length 16 - 21 mm; conspicuous crest of stiff hairs usually present on forehead of males; large ears usually joined above bridge of nose by a band of folded skin; anterior notch ('emargination') of palate usually reduced and separated from the palatal foramina by a bony bar, or, if including palatal foramina, width of emargination less than diameter of upper incisor (Genus *Chaerephon*) ... 22
- b Size larger; Fa 43 - 66 mm, greatest skull length 18 - 29 mm; no conspicuous tufts of fur on forehead of males; anterior palate with or without emargination; ears joined with band of skin or not 26
- 22 a Size larger, Fa 43 - 51 mm; greatest skull length 18 - 21 mm 23
- b Size smaller, Fa 34 - 42 mm; greatest skull length 15 - 18 mm 25
- 23 a White spots, stripes, or lateral band; anterior palate with or without conspicuous emargination; blackish throat patch absent; Fa 44 - 51 mm; greatest skull length 18 - 21 mm 24
- b Without with the markings or conspicuous lateral band; blackish throat patch present; colour umber above and below; Fa 43 - 47.5 mm; greatest skull length 18 - 20 mm; anterior palate with emargination *Chaerephon ansorgei*
- 24 a Colour umber brown with variable pattern of white spots or short stripes arranged laterally on crown and sometimes also on flanks and shoulders; Fa 46 - 51 mm; greatest skull length 19 - 21 mm; anterior palate with conspicuous emargination *Chaerephon bivittata*
African Chiroptera name *Chaerephon bivittatus*
- b No spots or stripes, but conspicuous lateral band of long, white hairs below, along flanks at junction with wing membrane, contrasting with very dark brown colour of body above and below; Fa 44 - 50 mm; greatest skull length 18 - 19 mm; anterior palate without conspicuous emargination *Chaerephon nigeriae*
- 25 a Males with long (13 - 14 mm) bicoloured postaural crest (dark basally, pale apically); light wings; colour below light with whitish mid-ventral band down to mid-belly; Fa 34 - 39 mm; greatest skull length 16 - 17 mm *Chaerephon chapini*
- b Males with short (10 mm) unicoloured postaural crest; wings light or dark; colour below variable, with or without white belly-stripe on the median area; Fa 37 - 42 mm; greatest skull length 16 - 18 mm *Chaerephon pumilus*
- 26 a Paler band of short hairs in front of shoulders, giving appearance of being naked; ears are joined above bridge of nose by band of skin; colour variable above but always conspicuously paler below, with variable degree of white colouring ventrally; third upper molar reduced to V-shape, or in Mops condylurus, with third 'leg' noticeably shorter in length than the second; anterior emargination of palate not well developed, with papatal foramina separated by bony bar; Fa 45 - 66 mm, greatest skull length 20 - 29 m (Genus *Mops*) 27
- b No naked band in front of shoulders; ears just meet across bridge of nose, but not conspicuously joined by a band of skin; colour variable above, but underparts tend to

- be same colour or only slightly paler, though white markings may be present; third upper molar N-shaped, with third 'leg' almost as long as second; anterior emargination of palata well developed, width of emargination greater than diameter of upper incisor; Fa 45 - 66 mm, greatest skull length 18 - 26 (Genus *Tadarida*) 28
- 27 a Smaller in size, Fa 43 - 49 mm, greatest skull length 20 - 23 mm *Mops condylurus*
African Chiroptera name *Mops (Mops) condylurus*
- b Larger in size, Fa 58 - 66 mm, greatest skull length 27 - 29 mm.....*Mops midas*
African Chiroptera name *Mops (Mops) midas*
- 28 a Smaller-sized, Fa 45 - 54 mm, greatest skull length 18 - 19 mm; lips wrinkled *Tadarida aegyptiaca*
- b Larger-sized, Fa 57 - 66 mm, greatest skull length 22 - 26 mm; lips not wrinkled .. 29
- 29 a Ears extremely large (c. 50 mm), protruding beyond snout when laid forward; white patch of fur between shoulders; interdental palatal length more than twice palatal width at anterior end; Fa 59 - 62.5 mm; greatest skull length 22.5 - 23.5 mm *Tadarida lobata*
- b Ears not as large or extended to same degree (19 - 25 mm); interdental palatal less than twice palatal width at anterior end; Fa 57 - 66 mm; greatest skull length 22.0 - 25.7 mm..... 30
- 30 a Larger, Fa 61 - 66 mm, greatest skull length 23.5 - 25.7 mm *Tadarida ventralis*
- b Smaller, Fa 57 - 59 mm, greatest skull length 22.0 - 23.0 mm *Tadarida fulminans*
- 31 a Muzzle with nose-leaves 32
- b Muzzle without nose-leaves (Family Vespertilionidae; plain-faced bats) 45
- 32 a Posterior leaflet of noseleaf with upper edge either elliptical in outline or tridentate (three-pronged) (Family Hipposideridae) 33
- b Posterior leaflet of noseleaf triangular with erect, pointed tip (lancet) (Family Rhinolophidae)..... 36
- 33 a Posterior leaflet of noseleaf with upper edge elliptical in outline; size larger, Fa > 40 mm (Genus Hipposideros) 34
- b Posterior leaflet of noseleaf with tridentate (three-pronged) shape; size smaller, Fa 31 - 35 mm..... 35
- 34 a Much larger sized, Fa 100 - 108 mm; fur short, colour below pure white *Hipposideros commersoni*
- b Much smaller sized, Fa 45 - 50 mm; fur long and fluffy, brownish-gray in colour *Hipposideros caffer*
- 35 a Size very small, Fa 31 - 35 mm; ears rounded..... *Clootis percivali*
- b Size larger, Fa 48 - 54 mm; ears pointed..... *Triaenops persicus*
- 36 a Face and/or lateral margins of sella covered with long hairs; greatest width of horseshoe over 9 mm; Fa 48 - 67 mm; CF component of echolocation call 55 kHz or less 37
- b Sella naked; greatest width of horseshoe less than 9 mm; Fa 40 - 57 mm; CF component of echolocation call 80 kHz or more..... 38
- 37 a Size larger, Fa 62 - 67 mm; echolocation call has CF frequency of 37 - 46 kHz *Rhinolophus hildebrandtii*
- b Size smaller, Fa 48 - 51 mm; echolocation call has CF frequency of 55 kHz *Rhinolophus fumigatus*
- 38 a Connecting process (Figure 22) rises to erect point or high and narrow horn; Fa 41 - 47 mm..... 39
- b Connecting process blunt and rounded (Figure 22); Fa 40 - 57 mm 40
- 39 a The concave lancet (Figure 22) from the posterior noseleaf has a narrowly pointed shpe, sella not rising to a very sharp narrow tip; fur shorter and darker; first phalanx of fourth finger (Figure 23) noticeably shortened in relation to metacarpal length; axillary (under-arm) tuft of stiff hairs in males; Fa 41 - 43 mm..... *Rhinolophus landeri*
- b Margins of lancet not concave, forming equilateral triangle, sella rising to a very sharp narrow tip; fur longer and paler; first phalax of fourth finger not noticeably shortened in relation to metacarpal length; no axillary tuft of still hairs in males; Fa 41 - 47 mm *Rhinolophus blasii*
- 40 a Canine and posterior premolar in contact, anterior premolar exterior to tooththrow and minute, invisible to naked eye or hand lens; echolocation call has CF component at 86 or 94 kHz; Fa 43 - 57 mm 41
- b Canine and posterior premolar not in contact, separated by anterior premolar which is

- just visible to naked eye, or with hand lens; echolocation call has CF component at 80, 83 or > 100 kHz, Fa 40 - 52 mm 42
- 41 a Larger, Fa 50 - 57 mm; echolocation call has CF component at 94 kHz. *Rhinolophus clivosus*
b Smaller, Fa 43 - 49 mm; echolocation call has CF component at 86 kHz *Rhinolophus darlingi*
- 42 a Larger, Fa 48 - 52 mm; distribution limited to the Western Cape and Eastern Cape; echolocation call has CF component at 90 kHz *Rhinolophus capensis*
b Smaller, Fa 40 - 46 mm; echolocation call has CF component of 83 kHz, or > 100 kHz 43
- 43 a Ears longer, > 22 mm; CF component of echolocation call 83 kHz; larger, Fa 42 - 46 mm *Rhinolophus simulator*
b Ears shorter, < 22 mm; CF component of echolocation call > 83 kHz; smaller, Fa 40 - 44 mm 44
- 44 a Front edge of connecting process almost concave; lancet with sides almost convex; dorsal fur long and whitish at base, tips grey-brown, ventrally pure white; occurs only in more arid areas of Botswana, Namibia and the Northern Cape; call unrecorded but almost certainly > 100 kHz, based on small body size *Rhinolophus denti*
b Front edge of connecting process convex; lancet with sides almost concave, tip pointed; fur nearly unicoloured, not whitish at base; occurs only in savanna areas of Zimbabwe and eastern South Africa; CF frequency 110 - 115 kHz *Rhinolophus swinnyi*
- 45 a Second phalanx of third digit about three times as long as first (Figure 24) (Subfamily Minopterinae) Null
b Second phalanx of third digit less than three times as long as first 48
- 46 a Larger-sized, Fa 45 - 50 mm; mass averages 15 g; greatest skull length exceeds 16 mm *Miniopterus inflatus*
b Smaller-sized, Fa 42 - 47 mm; mass 9 - 16g; greatest skull length 14 - 15 mm 47
- 47 a Smaller, Fa 42 - 44 mm, mass 9 - 11 g; skull c. 14 mm *Miniopterus fraterculus*
b Larger, Fa 42 - 47 mm, mass 9 - 16 g; skull c. 15 mm *Miniopterus schreibersii*
- 48 a Ears funnel-shaped, with deep emargination below tip; tragus long, narrow, sharply pointed (Figure 25); braincase high and rounded; long, soft, erect, woolly hair, with curled tips, giving grizzled appearance (Subfamily Kerivoulinae) 49
b Ears not funnel-shaped, without deep emargination below tip; tragus not sharply pointed; braincase not high and rounded (Subfamily Vespertilioninae) 50
- 49 a Size larger, Fa 34 - 39 mm; greatest skull length 15 mm or more; colour of upper parts reddish-chestnut, underparts whitish or with buffy tinge *Kerivoula argentata*
b Size smaller, Fa 30 - 36 mm; greatest skull length 13.5 or less; colour of upper parts brownish, may be lightly grizzled with greyish-white or white, underparts brown to greyish-brown to greyish-white to white *Kerivoula lanosa*
- 50 a Wing extremely narrow, third digit shorter than head and body length; skull flattened; tragus extremely short and blunt; hair very short *Mimetillus moloneyi*
b Wing not extremely narrow, third digit longer than head and body length; skull flattened; tragus not extremely short and blunt; hair not so short 51
- 51 a Fur coppery-reddish or yellowish to greyish-yellow in colour above and long and fluffy in texture; six upper cheekteeth and six lower cheekteeth on each side; elongated muzzle (Genus *Myotis*) 52
b Fur not coppery-reddish in colour or long fluffy in texture; fewer than 6 upper and lower cheekteeth; muzzle not elongated 56
- 52 a Size larger, Fa > 52 mm; distinctive pattern of contrasting black and coppery markings on wings and tail membrane *Myotis welwitschii*
b Size smaller, Fa usually < 52 mm (but may be up to 54 mm); colour uniform coppery-red or yellowish, without black markings on wings or tail membrane 53
- 53 a Wings without glands; size larger, Fa 41 - 54 mm 54
b Wings with glands; size smaller, Fa 32 - 35 mm 55
- 54 a Size larger, Fa 47 - 52 mm *Myotis tricolor*
b Size smaller, Fa < 47 mm *Myotis bocagei*
African Chiroptera name *Myotis bocagii*
- 55 a Size smaller, Fa 32 - 33 mm; upper parts dull greyish-yellow *Myotis seabrai*
African Chiroptera name *Cistugo seabrae*
b Size larger, Fa > 34 mm; upper parts honey yellow *Myotis lesueuri*

- 56 African Chiroptera name *Cistugo lesueuri*
a Wing membranes with conspicuous reticulated pattern; Fa 45 mm *Chalinolobus variegatus*
African Chiroptera name *Glauconycteris variegata*
b Wing membranes without conspicuous reticulated pattern 57
- 57 a Ear length 18 mm or more, about half length of forearm (genus *Laephotis*)..... 58
b Ear length < 18 mm; or much less than half of forearm..... 60
- 58 a Larger, Fa > 37 mm, greatest skull length > 16 mm, ear length > 19 mm 59
b Smaller, Fa < 37 mm (33 - 37 mm), greatest skull length < 15 mm, ear length < 19 mm
..... *Laephotis botswanae*
- 59 a Ear length 24 - 25 mm; Fa 38 - 39 mm; colour light buffy brown; distribution restricted to the Namib Desert *Laephotis namibensis*
b Ear length 19 - 22 mm; Fa 36 - 41 mm; colour buffy brown; occurs in the Western Cape, Free State and KwaZulu-Natal *Laephotis wintoni*
- 60 a Size larger, Fa > 43 mm..... 61
b Size smaller, Fa < 43 mm 64
- 61 a Tragus characteristically long and fine-pointed (Figure 26), the outer margin convex with a lobe towards its base; pronounced muzzle; dorsal fur soft with sheen, yellowish-brown coloured; underparts yellow, greyish-white or white; one pair of upper incisors present, Fa 43 - 80 mm (Genus *Scotophilus*)..... 62
b Tragus shorter, knife-shaped (Figure 27); muzzle not pronounced; dorsal fur rougher, without sheen, fawn to dark-brown coloured; ventral colour greyish; two pairs of upper incisors present, although outer incisors tiny, only visible with magnifying lens; Fa 46 - 50 mm..... *Eptesicus hottentotus*
- 62 a Larger sized, Fa 70 - 80 mm, greatest skull length > 30 mm..... *Scotophilus nigrita*
b Smaller sized, Fa 43 - 65 mm; greatest skull length 16 - 23 mm..... 63
- 63 a Size smaller, Fa 44 - 52 mm, greatest skull length 16 - 20 mm; adults with withish belly *Scotophilus viridis*
b Size larger, Fa 50 - 65 mm; greatest skull length 20 - 23 mm; adults with yellow belly
..... *Scotophilus dinganii*
- 64 a Distinctive pale fawn dorsal colour, slightly paler below, contrasting with much darker brown coloured wings and interfemoral membrane; characteristic tragus shape, indented on the inner surface and with two small lobes on the outer edge (Figure 28); Fa 28 - 33 mm *Nycticeinops schlieffeni*
African Chiroptera name *Nycticeinops schlieffenii*
b Colour and tragus shape not as above 65
- 65 a Single, pair or prominent, procumbent upper incisors; rostrum broad, c. 7 mm, about 50 % of greatest skull length; penis elongated, reaching 25 % of head and body length; Fa 30 - 31 mm (Genus *Scotoecus*) 66
b Two pairs of upper incisors, outer much smaller than inner; rostrum not broad, c. 5 - 6 mm, or 40 % of greatest skull length; penis not so elongated, less than 25 % of head and body (Genus *Pipistrellus*) 67
- 66 a Pale-winged, four or five upper cheekteeth *Scotoecus albofuscus*
b Dark-winged, four upper cheekteeth *Scotoecus hirundo*
- 67 a Underparts pure white; upper, inner incisors deeply bifid (i.e. divided)..... *Pipistrellus rueppellii*
b Underparts brown or grey; upper, inner incisors not deeply bifid..... 68
- 68 a Five upper cheekteeth, including a tiny anterior premolar, creating a gap between canine and posterior premolar which may be visible with a magnifying lens in the field 69
b Four upper cheekteeth, lacking tiny anterior premolar; canine and posterior premolar closely pressed together (Subgenus *Neoromicia*, previously grouped in the genus *Eptesicus*). 72
- 69 a Tragus characteristically 'hatchet-shaped' with sharp obtuse angle in posterior edge; outer upper incisor more than half length of inner upper incisor; forehead strongly concave, typically found roosting in unfurling banana or *Strelizia* leaves ; Fa 29 - 38 mm..... *Pipistrellus nanus*
b Tragus not 'hatchet-shaped', without distinct angle in posterior edge; outer upper incisor less than half length of inner upper incisor; forehead usually flat or weakly concave, not found in banana or *Strelizia* leaves 70

- 70 a Interdental palate as broad as long; forehead flat; total length of skull 12 mm or less; Fa 27 - 29 mm *Pipistrellus rusticus*
 b Interdental palate longer than broad; forehead at least weakly concave; total length of skull more than 12 mm; Fa 29 - 35 mm 71
- 71 a Posterior upper incisor barely extending above cingulum of anterior incisor; anterior upper premolar a pointed tooth rising above cingulum of canine; maxillary tooththrow more than 4.5 mm; Fa 31 - 35 mm *Pipistrellus kuhlii*
 b Posterior upper incisor extending well above cingulum of anterior incisor; anterior upper premolar a flat-crowned tooth; maxillary tooththrow less than 4.5 mm; Fa 29 - 33 mm *Pipistrellus anchietai*
 African Chiroptera name *Hypsugo anchietae*
- 72 a Wing membranes white or translucent; Fa 34 - 38 mm *Pipistrellus rendalli*
 African Chiroptera name *Neoromicia rendalli*
 b Wing membranes dark; Fa 29 - 36 mm 73
- 73 a Dorsal colour paler; wing membranes edged with white; dorsal fur up to 8 mm long; Fa 30 - 32 mm; skull lacking posterior, occipital 'helmet'; only occurring in savanna regions *Pipistrellus zuluensis*
 African Chiroptera name *Neoromicia zuluensis*
 b Dorsal colour darker; wing membranes not edged with white; dorsal fur not more than 5 mm long; Fa 29 - 36 mm; skull with posterior, occipital 'helmet'; occurring widely in savanna, grassland, montane and semi-arid regions *Pipistrellus capensis*
 African Chiroptera name *Neoromicia capensis*

Appendix 5a: Russ et al. (2001). Key to the bats of Madagascar

- 1 a Has a claw on the thumb, and on the second digit. Teeth of the frugivorous type.... 2
 b Has claw on the thumb, but not on the second digit. Teeth of the insectivorous type 4
- 2 a No tail present. *Pteropus rufus rufus*
 African Chiroptera name *Pteropus niger*
 b Tail present 3
- 3 a Forearm much greater than 95 mm. *Eidolon dupreanum*
 b Forearm much less than 95 mm. *Rousettus madagascariensis madagascariensis*
 African Chiroptera name *Rousettus madagascariensis*
- 4 a Has fixed suckers on wrists and ankles. *Myzopoda aurita*
 b No suckers 5
- 5 a Nose leaf present (can be slit nosed) 6
 b No nose leaf present 10
- 6 a Muzzle divided by a longitudinal furrow with fleshy dermal outgrowths. Tail terminates in a T-shaped tip. *Nycteris madagascariensis*
 b Face with well-developed nose-leaf covering muzzle 7
- 7 a Forearm greater than 75 mm. Top of nose-leaf not very complex and is rounded. *Hipposideros commersoni commersoni*
 African Chiroptera name *Hipposideros commersoni*
 b Forearm less than 75 mm. Nose leaf is trident-shaped 8
- 8 a Forearm greater than 48 mm. Ears (from the notch) smaller than 15 mm. . *Triaenops rufus*
 b Forearm less than 48 mm. Ears (from the notch) greater than 15 mm 9
- 9 a 3rd metacarpal greater than 35 mm. Tail less than 20 mm. Dorsal pelage is grey-black. *Triaenops auritus*
 b 3rd metacarpal less than 35 mm. Tail greater than 20 mm. Dorsal pelage is grey-brown. *Triaenops furculus*
- 10 a Free tail. Does not include slight extension past interfemoral membrane (<5mm) . 21
 b Tail enclosed with interfemoral membrane 11
- 11 a second phalanx of 3rd digit about three times as long as the first digit; braincase high and rounded. 3rd and 4th fingers are bent at the joint between the 1st and 2nd phalanx when at rest [Fig 41] (all these and no postcalcarial lobe) 12
 b second phalanx of third digit not especially elongated 15
- 12 a Forearm measurement more than 46 mm (mean = 48.4; 46.7-49.9); greater length of head exceeding 16.0 mm. *Miniopterus gleni*
 b In general, forearm less than 46 mm; greater length of head smaller than 16.0 mm 13
- 13 a Forearm more than 40 mm (14) 14
 b Forearm less than 40 mm. (May be a form of *Miniopterus minor*) *Miniopterus manavi*
- 14 a Greater length of skull is not less than 15 mm (mean = 15.5; 15.0 – 16.1). Forearm mean = 44.2 (41.8-46.6); M3-M3: mean = 6.5 (6.3-6.8). *Miniopterus majori*
 b Greater length of skull is in general less than 15 mm (mean = 14.8; 14.5-15.1). Forearm mean = 42.8 (40.7-44.4); M3-M3: mean = 5.9 (5.7-6.0). *Miniopterus fraterculus*
- 15 a Post-calcarial lobe present [Fig. 42A]. Tragus short, curved, and rounded at tip and may be bent forward 16
 b No postcalcarial lobe. Tragus long and sharp.[Fig. 42B] *Myotis goudoti*
- 16 a Tragus obviously bent forward [Fig. 43] 20
 b Tragus not bent forward at top. 17
- 17 a Last tail vertebrae projects beyond membrane by a maximum of 1mm. The post-calcarial lobe broad with visible T-piece cartilage. Two pairs of upper premolars present 18
 b Last 1-2 tail vertebrae project beyond membrane 4-5mm. Post-calcarial lobe is narrow, usually without a visible T-piece cartilage. One pair of upper premolars present 19
- 18 a Note: Pipistrelle species not established as yet – record as *Pipistrellus* spp. But note any observations *Null*
- 19 a There is no single characteristic that separates these species. See text for further information. *Null*
- 20 a Forearm greater than 55 mm. *Scotophilus robustus*

- 21 b Forearm less than 55 mm. *Scotophilus borbonicus*
 a Free terminal proportion of tail emerges above middle of upper surface of interfemoral membrane [Fig. 44B] 22
 b Free terminal proportion of tail projecting beyond hind margin of interfemoral membrane [Fig. 44A] 23
- 22 a Forearm > 50 mm (58-64); males with large gular sac in the throat. *Taphozous mauritianus*
 b Forearm < 50 mm (37-41mm); no gular sac. *Emballonura atrata*
- 23 a Ears very large (28-40 mm), joined on extended snout; forearm > 60 mm. . *Otomops madagascariensis*
 b Different face 24
- 24 a Ears separated at the base [Fig. 46B]..... 25
 b Ears joined at the base [Fig. 46A] 27
- 25 a Ears separated at the base. Translucent ears are erect and well separated by a space at the base. Unwrinkled lips. White underside. Forearm less than 45 mm (26) 26
 b Ears separated at the base. Forearm is greater than 55 mm. *Tadarida (Tadarida) fulminans*
 African Chiroptera name *Tadarida fulminans*
- 26 a Ears with anterior margin slightly emarginated below pointed tip. *Tadarida (Mormopterus) acetabulosa*
 African Chiroptera name *Mormopterus acetabulosus*
 b Ears without emargination, tips broadly rounded. . *Tadarida (Mormopterus) jugularis*
 African Chiroptera name *Mormopterus jugularis*
- 27 a Forearm less than 40 mm 28
 b Forearm greater than 40 mm 29
- 28 a Forearm usually less than 38mm; Tragus is small and square. [Fig. 48A] *Tadarida (Chaerephon) leucogaster*
 African Chiroptera name *Chaerephon leucogaster*
 b Forearm usually greater than 38mm; Tragus is small, sharp and straight. [Fig. 48B] *Tadarida (Chaerephon) pumila*
 African Chiroptera name *Chaerephon pumilus*
- 29 a Forearm greater than 55mm. *Tadarida (Mops) midas miarensis*
 African Chiroptera name *Mops (Mops) midas miarensis*
 b Forearm less than 50 mm. *Tadarida (Mops) leucostigma*
 African Chiroptera name *Mops (Mops) leucostigma*

Appendix 5ah: Fahr et al (2002). A revision of the *Rhinolophus maclaudi* species group with the description of a new species from West Africa (Chiroptera: Rhinolophidae).

- 1 a Horseshoe without secondary leaflets; no or very inconspicuous median emargination; rims around nostrils \pm straight and parallel; sella inclined forward. FA: 60 - 69, Cblc: 24.0 - 27.8, Mast: 12.3 - 13.9, Zyg: 12.3 - 13.8 2
- b Horseshoe with one pair of secondary leaflets; with conspicuous median emargination; rims around nostrils semicircular; sella erect and \pm parallel to lancet. FA: 54 - 62, Cblc: 20.7 - 23.6, Mast: 10.9 - 12.3, Zyg: 10.5 - 11.4..... 3
- 2 a FA: 63.6 - 68.7, Cblc: 27.0 - 27.8, Mast: 13.3 - 13.9, Zyg: 13.2 - 13.8, C-M/3: 10.5 - 10.8..... *Rhinolophus maclaudi*
- b FA: 59.9 - 60.5, Cblc: 24.0 - 24.1, Mast: 12.3 - 12.4, Zyg: 12.3 - 12.5, C-M/3: 8.9 - 9.0 *Rhinolophus ziama*
- 3 a Lancet moderately exceeding height of sella. FA: 55.0 - 61.7, Cbs: 22.0 - 23.6, MastoidW: 11.2-12.3, ZygomaticW: 10.5 - 11.4, M3 -M3 : 7.3 - 8.2, C-M/3 : 8.2 - 8.9 *Rhinolophus ruwenzorii*
- b Lancet conspicuously exceeding height of sella. FA: 54.2 - 54.3, Cblc: 20.7 - 21.2, Mast: 10.9 - 11.2, Zyg: 10.6 - 10.9, M3-M3 : 7.8 - 8.0, C-M/3: 7.9 - 8.1 *Rhinolophus hilli*
African Chiroptera name *Rhinolophus ruwenzorii*

Appendix 5ai: Jacobs and Fenton (2002). Mormopterus petrophilus

1	a	Skull extremely flattened; occurs in Africa.....	2
	b	Skull not extremely flattened; mostly not in Africa	3
2	a	Forearm with wartlike granulations; length of forearm 29 - 36 mm <i>Mormopterus setiger</i> African Chiroptera name	<i>Platymops setiger</i>
	b	Forearm lacking wartlike granulations; length of forearm 38 - 48 mm <i>Mormopterus petrophilus</i> African Chiroptera name	<i>Sauromys petrophilus</i>
3	a	Known from the New World	4
	b	Not known from the New World	6
4	a	Recorded from Cuba; length of forearm 29 - 31 mm	<i>Mormopterus minutus</i>
	b	Recorded from southwestern South America; length of forearm 29 - 31 mm	5
5	a	Length of forearm 34 - 49 mm; skull not flattened; 1 upper premolar per quadrat; basisphenoid pits present; palate not domed	<i>Mormopterus kalinowski</i>
	b	Length of forearm 33 - 34 mm; skull flattened; 2 upper premolars per quadrat; no basisphenoid pits; palate domed.....	<i>Mormopterus phrudus</i>
6	a	Recorded from Madagascar; some records from Africa	7
	b	Only known from location east of Madagascar.....	8
7	a	Madagascar; 2 African records; ears triangular in shape; length of forearm 38 - 39 mm	<i>Mormopterus acetabulosus</i>
	b	Madagascar; ears rounded; length of forearm 35 - 37 mm	<i>Mormopterus jugularis</i>
8	a	Recorded from Sumatra; not known from Australia and/or New Guinea; length of forearm 32 - 34 mm	<i>Mormopterus doriae</i>
	b	Not known from Sumatra; occurs in Australia and/or New Guinea; length of forearm 33 - 40 mm.....	9
9	a	Length of forearm <= 33 mm.....	<i>Mormopterus planiceps (=loriae)</i>
	b	Length of forearm > 33 mm.....	10
10	a	Gular gland lacking; heavy build; length of forearm 33 - 99 mm <i>Mormopterus beccarii</i>	
	b	Gular gland present; light build; length of forearm 36 - 40 mm <i>Mormopterus norfolkensis</i>	

Appendix 5aj: Decher and Fahr (2005). *Hipposideros cyclops*

- 1 a Ears united at base by low frontal band (*megalotis* group)..... *Hipposideros megalotis*
 b Ears separate 2
- 2 a Ears long, narrow, and pointed (*cyclops* group) 7
 b Ears short, broad, and rounded or triangular..... 3
- 3 a Ears rounded or broadly triangular and bluntly pointed; upper incisors weak... *bicolor*
group
 b Ears triangular and pointed, upper incisors strong 4
- 4 a Noseleaf with 2 lateral leaflets; frontal depression of cranium well defined, maxillae
 elongated *pratti* group
 b Noseleaf with 3 or 4 lateral leaflets; frontal depression of cranium lacking or shallow,
 maxillae not elongated 5
- 5 a Noseleaf with upper edge of posterior leaf slightly lobate; posterior leaf narrower than
 horseshoe *armiger* group
 b Noseleaf with upper edge of posterior leaf forming an arc or circle; posterior leaf equal
 in width to horseshoe 6
- 6 a Ears with a small projection at the antitragal fold *speoris* group
 b Ears without antitragal modification..... *diadema* group
- 7 a Posterior lateral leaflet not extending anteriorly beneath anterior leaflet onto upper lip;
 premaxillae wide posteriorly, forming a broad junction with palate; anterior palatal
 foramina enclosed..... 8
 b Posterior lateral leaflet extending anteriorly beneath anterior leaflet onto upper lip;
 premaxillae narrow posteriorly, forming a narrow, spatulate junction with palate;
 anterior palatal foramina open posteriorly 9
- 8 a Length of forearm 56–73 mm; antorbital foramen large compared to overall skull size
 *Hipposideros cyclops*
 b Length of forearm 74–76 mm; antorbital foramen small compared to overall skull size
 *Hipposideros camerunensis*
- 9 a Median processes of intermediate and posterior leaves not greatly developed or
 especially club-shaped; cranium without frontal depression..... 10
 b Median processes of intermediate and posterior leaves well developed, usually club-
 shaped; cranium with frontal depression 11
- 10 a Posterior leaf lacking any posterior supplementary structure; rostral eminences not
 much inflated; rostral profile nearly flat; width of cochleae 4–5 times their distance
 apart; known only from eastern New Guinea *Hipposideros muscinus*
 b Posterior leaf with a posterior supplementary structure, twin-walled, cellular; rostral
 eminences inflated; rostral profile concave; width of cochleae 6 or more times their
 distance apart; confined to western and central New Guinea *Hipposideros wollastoni*
- 11 a Interorbital region wide; rostrum elongate; shallow sphenoidal depression present;
 width of cochleae ca. 4 times their distance apart; posterior ridge of M3 reduced, N-
 pattern of tooth incomplete; m3 with subrectangular posterior trigonid 12
 b Interorbital region narrow; rostrum short; no sphenoidal depression; width of cochleae
 ca. 6 or more times their distance apart; posterior ridge of M3 little reduced, N-pattern
 of tooth nearly complete; m3 with triangular posterior 13
- 12 a Dorsal fur color Hair Brown, ventral fur silver-tipped, hair on midback ca. 14 mm long;
 lower club-shaped process on noseleaf very long and tubular; Telefomin area, central
 New Guinea *Hipposideros corynophyllus*
 b Dorsal fur color Prout's Brown with reddish tinge; ventral fur Cinnamon Rufus, hair on
 midback ca. 9 mm long; lower club-shaped process of noseleaf shorter and laterally
 flattened; near Imonda, northern central New Guinea..... *Hipposideros edwardshilli*
- 13 a Median process of posterior leaf large, club-shaped; skull larger (rostral width 5.6–6.3
 mm), C–M3 6.5–7.3 mm; cranial frontal depression shallow; rostral eminences greatly
 inflated; known only from eastern New Guinea and northeastern Queensland,
 Australia..... *Hipposideros semoni*
 b Median process of posterior leaf tuberclelike, not especially club-shaped; skull smaller
 (rostral width 5.1 mm); C–M3 5.6 mm; cranial frontal depression deep; rostral eminences
 moderately inflated; confined to Northern Territory, northwestern Australia, and
 northwestern Queensland, Australia *Hipposideros stenotis*

Appendix 5ak: Bates et al. (2006). A description of a new species of *Pipistrellus* (Chiroptera: Vespertilionidae) from Madagascar with a review of related Vespertilioninae from the island.

- | | | | |
|---|---|---|---|
| 1 | a | Two upper premolars (P ² and P ⁴ - Fig. 5)..... | 2 |
| | b | One upper premolar (P ² - Fig. 9). | 4 |
| 2 | a | Long penis (> 9.0 mm), long baculum (> 8.0 mm), relatively large second upper incisor (I ³ = 2/3 the height of the bicuspid I ²), and larger first premolar (P ² width > 10% of C-M ³ length - Fig. 5). | <i>Pipistrellus raceyi</i> |
| | b | Short penis (< 6.0 mm), short baculum (< 3.0 mm), small second upper incisor [I ³ = 1/2 the height of the (usually) unicuspid I ²], and very small first premolar (P ² width < 8% of C-M ³ length) - (Fig. 5)..... | 3 |
| 3 | a | Baculum thin and curved (Fig. 10A); zygomata thin (Fig. 11A), and upper canine (C ¹) not in contact with the second upper premolar (P ⁴) (Fig. 5B and 5Bi). | <i>Pipistrellus hesperidus</i> |
| | b | Baculum broader and not curved (Fig. 10B); zygomata more robust (Fig. 11B) and upper canine (C ¹) (usually) in contact with the second upper premolar (P ⁴ - Fig. 5C)..... | <i>Hypsugo anchietae</i> |
| 4 | a | Forearm long (> 33 mm); skull large (CCL > 13.0 mm); baculum longer (> 2.7 mm).
African Chiroptera name | <i>Neoromicia melckorum</i>
<i>Myotis myotis</i> |
| | b | Forearm shorter (= 33 mm); skull smaller (CCL < 12.5 mm); baculum shorter (< 2.5 mm). | 5 |
| 5 | a | Pelage paler; tibiae shorter (< 12.5 mm); baculum with relatively narrower shaft (Fig. 8B); narrow braincase (BB < 6.5 mm) and palate (M ³ -M ³ < 5.4 mm). . | <i>Neoromicia malagasyensis</i> |
| | b | Pelage darker; tibiae longer (= 12.5 mm); baculum with relatively broader shaft (Fig. 8A); broader braincase (BB > 6.5 mm) and palate (M ³ -M ³ = 5.4 mm). | <i>Neoromicia matroka</i> |

Appendix 6: Images of type specimens

Appendix 6a: Lateral, Ventral and Dorsal skull

Clockwise from top, lateral, ventral and dorsal skull images of type specimens. The squares of the graph paper are 2 mm wide.

Figure 234 BMNH 1823.1.1.15 Holotype of *Pipistrellus marrensis* Thomas and Hinton, 1923, synonymized with *P. rusticus* (Tomes, 1861).
